Last Tuesday the editor of this Review addressed a meeting of the Young Scots Society at Edinburgh on the subject of "Modern Towers of Babel" and their builders. Beyond its title there was little of the scriptures in the address, which dealt of the lust of empire in nations, and the greed of riches in men, with the evil consequences arising from both. The meeting, with Mr. John W. Gulland, the excellent President of the Society, in the chair, was a most sympathetic one, and the depth of enthusiasm and intelligent keenness of appreciation displayed came as a pleasant and most gratifying surprise to the speaker after the apathy and cynical indifference of London on any subject outside a cup tie, a cricket match, or "the latest" from Newmarket. He will think more hopefully of his native land after that Tuesday evening. Are the "Young Scots," though, entirely of the masculine persuasion, or are the fair sex admitted to their membership? If they are not they should be, for woman's influence in the world is growing more and more powerful, and every effort ought to be made to direct it into the right channels, to free it from the clogs of superstition, and endow it with civic rights.

But Scotland lives yet, in spite of deer forests and grouse drives, Carnegies, and the worship of mere money.

There has been a good deal of buying of South Durham Steel and Iron securities on the northern exchanges during the past week or so, of the kind usually known as 'cute, and as the finished iron and steel trade is just now in a very depressed condition it was generally concluded that the business had been prompted by knowledge of contemplated developments. Reports are now circulated to the effect that the South Durham Company is to be joined to the Cargo Fleet Iron Works, at Middlesbrough, which were purchased about a couple of years ago by Sir Christopher Furness, and have since been undergoing extensive and important alterations. Perhaps the opportunity will be taken to squeeze out some of the water from the South Durham capital since it can never hope to justify the valuation put upon it on the strength of one or two abnormal years.

The misfortunes of the General Ceylon Tea Estates have led to the promulgation of a scheme whereby it will be possible not only to postpone the repayment of the debentures for twenty years, but also to give the present holders of ordinary shares the prospect of a little return on their money. Put briefly, the directors suggest that the debenture debt shall continue until 1928 on the same terms as at present, with an additional proviso that a cumulative sum of £3,000 shall be set aside each year for the reduction of the amount before any distribution is made to the shareholders, and that the depreciation fund of £2,000 per annum may be used for the purpose of improving and developing the estates, more especially in rubber cultivation. It is further proposed that in place of the existing 25,854 preference and 21,950 ordinary shares of £5 each, the company should issue preference stock to the extent of £4 for each preference and £1 for each ordinary share, and by these means reduce the issued capital to £125,366. On the basis of the last two years' results, little benefit would result from the conversion, as the net profits were only £3,718 and £1,214, but owing to the rise in prices the board is more hopeful of the current season, and talks glibly of being able to make some distribution by way of dividend to the holders of the present preference shares. When this has been paid, the balance of the arrears due on those shares will be satisfied by an issue of "surplus certificates" carrying no interest. After allowing for the new debenture redemption fund of £3,000, and the depreciation fund of £2,000, in addition to the existing charges, the surplus, if any, is be devoted to paying a dividend up to 6 per cent. on the preference stock, and anything over will go towards the redemption of the above mentioned certificates by purchase under par, or drawings if at par. The scheme has met with the approval of the shareholders' committee, but it seems to us hardly drastic enough if the undertaking is to be placed on a really sound basis. At no time since the company was formed in 1897 has it succeeded in paying even the preference dividend, and the only point in its favour is that the allowance of £2,000 for depreciation has been faithfully made each year.

At a special meeting of the Chamber of Mines, at Johannesburg, last Wednesday, a resolution was unanimously passed declaring that, in view of the finding of the Labour Commission, the Chamber urges on the Government the necessity of immediate legislation to provide for the introduction of indentured coloured labourers under restrictions. No doubt the Government will oblige.

It is announced that Mr. Monypenny, the editor of the Johannesburg *Star*, has resigned his post, owing to the divergence of views between himself and the financial houses regarding Chinese labour. His policy is in conflict with the above resolution, and we congratulate him on awaking to the light at last.

It is said that three rather decrepit Argentine railways are going to be joined together, in the forlorn hope that they will hold one another up. They are the Entre Rios, Argentine North-Eastern, and East Argentine, and as all three systems connect, the usual great economies are expected from bringing them under one control. The East Argentine Company is, of course, in a much better position than the other two, having paid an average dividend of 2 per cent. on its stock during the past five years, whereas the Entre Rios has succeeded in accumulating arrears of 37 per cent., and the Argentine North-Eastern of 68 per cent. on the preference capital. In addition, the latter has been compelled to modify the rights of the debenture holders, so the outlook is not very cheerful, fusion or no fusion.

Holders of part of the founders' shares of the Andre-Mendel drapery concern, D. H. Evans and Co., are anxious to sell them to the public without giving any particular reason for their action. A small portion of the company's capital is represented by 2,000 £1 founders' shares, and some three years ago 1,969 of them were formed into a company, holders being given sixty shares in the new company for each founder's share held. It now appears that 35,000 of these converted shares are being offered at 30s. apiece, and although Evans founders' yearly dividend has steadily increased until it has reached £10 10s. per share, we must not forget the very unfavourable trade conditions of the past summer. If the above level could be maintained the return on the shares offered would be about 7 per cent., but perhaps the vendors anticipate a falling off.

The Chilian Government is credited with issuing 20,000,000 pesos of bonds, bearing 6 per cent. interest and redeemable in three years. A large sum of money is to be devoted to the construction of railways and other public works. It is believed that the customs duties on sugar will remain unaltered until the end of next year, presumably to provide the interest on the new debt.

A correspondent in Edinburgh, than whom no one is better acquainted with the fact, writes to say that he is amused at our reference to the figure to which the Royal Bank of Scotland has reduced its Consols, and adds he would have expected so shrewd an observer to note that 85⅞ was fixed merely because it measured the limit to which the whole of the surplus profits would go. We quite agree, this ought not to have been overlooked, nor yet the fact that the present figure is only a step in the stage of recession. That is to say, the Bank will pursue this policy, and will be wise in so doing. To get the investment down to a 3 per cent. basis ought to be the aim of every bank. Another point raised by the correspondent is the decrease in the deposits, and it is well worth noting, because the present tendency necessarily must be for deposits of banks to shrink. The decline in the deposits of Scotch banks alone last year was upwards of £800,000, and as long as securities continue to fall in price this diminution must go on. Lower deposit figures, consequently, do not imply decline in prosperity, but merely that the lending power of banks is contracted by the decline in prices. They cannot make such large advances with Consols under 90 as they could when they stood above 110. Deposits are affected by advances to a much larger extent than the purblic supposes, hence the diminution in their total.

Few people can afford the time to read the War Commission Blue Books, and perhaps fewer still to buy them. But all, we trust, would like to get a clear idea of the facts, and a vivid conception of the criminal ignorance and indifference of the Government. The more welcome, therefore, is Mr. W. T. Stead's Christmas annual. "How Britain goes to war." You can buy it at any discount booksellers for 9d., and it is an altogether praiseworthy production. Mr. Stead has no living rival as a boiler-down—vivid, rapid, accurate and full, this shilling annual is a book to be bought, studied and cherished. But why is Kynochs overlooked?

We regret, and many people in the City will keenly share the feeling, to announce the death of Mr. Alfred Louis Cohen. It is some years now since his familiar figure has been seen in the haunts of business, but for many a day Mr. Alfred Cohen was well known as a member of the firm of Louis Cohen and Sons, one of the largest and most respected houses on the Stock Exchange, and for some time he was one of the managers of that institution, a man trusted and respected, of good counsel and shrewd practical wisdom. He died of cancer, at the comparatively early age of 65.

TRADE AND PRODUCE.

Wheat.—The markets show a slightly firmer undertone owing, it is said, to the colder weather and stronger American cables, but business remains as dull as ever, and the cables have had no sustained influence. Prices for spot parcels have kept fairly steady throughout the week, futures have fluctuated within narrow limits, and show practically no change from last week's prices. Farmers' deliveries last week were 55,276 qrs., which sold at 26s. 6d. per qr., as compared with 50,771 qrs. the week before at 26s. 9d. per qr., and the highest price for the English best grain remains at about 33s. per qr., while foreign is rather firmer. Our imports last week were considerably less than in the previous one, being 437,780 qrs. against 601,393, and Dornbusch estimates the quantity on passage as 1,680,000 qrs. of wheat and flour to the United Kingdom, against 1,720,000 last week. American markets have shown more excitement, various influences, such as light receipts in the North-West, heavy South-Western movements, and the manœuvres of the Armour party, all causing considerable fluctuations, the inducement being bullish on the whole. Bradstreet estimates the quantities in sight east of the Rockies at 56,857,000 bushels, against 56,113,000 last week, and 77,288,000 a year ago.

Wool.—The position of Colonial wool at the close of the sales caused some disappointment to the brokers. Merinos, in view of the short supply, were expected to maintain their high prices, and though the last days of the sale saw some improvement, medium and inferior sorts ruled 5 per cent. below September prices. Crossbreds suffered more, in the coarse grades dropping as much as 15 per cent., and in medium sorts from 5 to 7½ per cent., only the finest qualities maintaining their high rates. 80,000 bales out of an available 84,500 were sold, 42,000 bales being taken by the home trade, and 38,000, by the Continent, the latter houses as usual absorbing the greater part of the business. It cannot be said that the local markets show much sign of making up now that the sales are over, and the depression seems to be gaining strength. Prices as yet have not been fixed at any new level, but the tendency is already in favour of the buyers, and business grows more difficult in all branches of the trade. Raw material is not wanted, merchants being able to cover their needs under old contracts fixed at values lower than the present ones. Manufactured goods are in greater request for next spring, but at unprofitable rates.

Linen.—No new development has appeared, and business tends to decrease rather than otherwise. The same cry of no profits is still heard, and manufacturers will not buy yarn at present high rates until they can obtain a corresponding rate for cloth. They declare that demand from retailers is almost stagnant, and therefore can stand off until raw materials fall. Prices for these are supposed to have reached their highest limits at last, and slightly easier tendencies have been occasionally shown, but not as a rule. Comparing Russian flax prices with those current in September, they show a rise of from £5 to £10 per ton, while Irish flax reached its highest point so far this season at a sale last week when one lot of exceptional quality sold at 10s. 6d. per stone. Cross-channel trade in bleached and finished linens remains very dull, but exports show a slight all-round improvement.

Cotton.—In spite of the wild excitement raging on the New York market nearly all the week, business at Liverpool has been restricted to comparatively narrow limits, though prices have risen. One reason for this is that the receipts of American this season exceed those of last by 132,000 bales, a proof, as Sir Jacob Behrens and Sons point out, of the healthy European demand. The position is, however, far from strong since much of this cotton is undoubtedly coming forward against c.i.f. contracts placed some months ago, when prices were much lower than those now ruling. Therefore it is quite possible we may have a burst of speculation on this side before many days are past, for interior stocks are smaller than they were a year ago. Egyptians are quieter, and prices down ⅛d. per lb. since last week. For yarns the demand continued on a fair scale, until prices went up in sympathy with the rise in raw cotton, and caused manufacturers to limit their purchases to their immediate requirements. Spinners, however, are well engaged, and can afford to wait before accepting offers which would still further trench upon their already small margins. India wants yarn, but has not yet made up its mind to pay full rates, and the export trade has been confined to the nearer continental markets. Foreign spinners also happen to be well engaged, and enquiries are therefore coming forward for English yarns, which have not been exported for years, and if only prompt delivery could be assured a good business would be done. But unfortunately, with raw material so erratic in its value, promptness is a thing difficult to attain. In cloth likewise the further rise has had an injurious effect, and put a stop to business, which last week was almost completed. Yet even now is India inquiring and if prices could only be adjusted a fair business might be done both with Bombay and Calcutta, for stocks there are evidently becoming depleted, a sign of this being the demand for prompt delivery. China shows no change, but the Straits and smaller Eastern markets are getting anxious to buy.

New York began the week by putting futures down a few points on Monday under pressure of sales to liquidate. But the bulls in anticipation of a Government report favourable to their tactics soon rallied the market, and the fun became fast and furious, both Tuesday and Wednesday seeing sharp advances in quotations. On Thursday the Government Bureau issued its long-expected report, which estimated this season's crop to be 9,962,039 bales, or nearly a million bales below the previous lowest estimate. These figures produced a scence of unparalleled excitement, and prices jumped up with a rapidity almost unprecedented. The position which the big bull interest most favoured was March, the quotations for which at one time showed an advance of between 69 and 74 points on the day, though every other month rose sharply. Later a reaction set in, when sales to take profits began to take effect. The bears then turned round and declared the Government had underestimated the crop as it did two years ago when the figures were about a million bales too low. Moreover they argued a bull market is liable at any moment to become top-heavy, and that a sharp reaction must set in after so sharp a rise. So far there is no sign of this taking place, and the general impression is that the bulls have got the situation well under control.

Yesterday dealings in American at Liverpool were still restricted, but the spot quotation none the less was put up forty points, closing at 6.84d. middling and 7.08d. M.F. Futures were unsettled and irregular, December leaving off at 6.70d., while 6.65d. was asked for Dec.-Jan., 6.60d. to 6.61d. for Jan.-Feb., 6.59d. Feb.-March, and 6.57d. March-April, later positions ranging from 6.55d. April-May down to 6.49d. July-August. Egyptians recovered the ⅛d. they lost earlier in the week, and closed at 7 11-16d. brown fair and 8¾d. F.G. fair.

Coal.—With the sudden cold snap the demand for house coals has naturally increased, and larger quantities are being sent to the different markets. A rise in prices has became inevitable, and as a rule 1s. per ton has been put upon all coals delivered to the public. Other descriptions, except gas, are not doing so well, steams are at the slackest time of the year, trade at the ports has been interfered with by the stormy weather, and prices for prompt delivery have consequently fallen. Welsh coal owners are fully employed for the time being upon Admiralty contracts, and sales to Russia, Japan, Spain, and France, but there is a slackness in some districts which seems gaining ground.

Copper.—Bears have been doing their best to bring the market down this week, but have been firmly resisted, and the bulls have triumphed as the influences in the market have been mostly in their favour. An unconfirmed rumour of the closing of the Montana mines frightened bears into covering, and they were made still more nervous by the serious shrinkage in stocks and good deliveries. The market, however, closed quiet last night, with spot at £55 2s. 6d. and three months at £54 12s. 6d.

Tin.—A sharp decline cabled from the East was followed by a sudden drop here, and the market started the week with 25s. loss. Chinese movements in the East causing a rise in prices at Singapore and Penang, had a good effect in London, and values have been hardening again all the week. On Wednesday business at Penang was reported at 122 c.i.f., but last night's closing prices here were only 2s. 6d. better than Thursday, the market having relapsed into a quiet state, with cash at £119 5s. and three months at £220 13s.

Iron and Steel.—This week has been another dull one on the Glasgow market, the volume of business done being small. Consumers refuse to buy more than sufficient to meet their immediate wants, while speculators are shy of touching warrants all because of the rumours about American dumping. But this, we think, is only the apparent reason since nearly every one of the finished iron and steel trades find it difficult to book orders, the only exception being the locomotive builders. These are fairly busy with South African contracts, and the North British Locomotive Union is reported to have secured further orders from the Cape and Egyptian Governments. Business in the north of England is slack also, but this is not unusual at this time of the year, as the present month is always regarded as the slackest of the twelve. Prices of pig-iron moved slightly down during the week, and other quotations were decidedly feeble. Moreover, the general impression is that trade in the early part of the year is not likely to be good, and the prices for prompt delivery are therefore higher than for forward. Except steel all branches of the manufactured iron and steel trades are dull, while the position of the shipbuilding yards is more gloomy even than it was. At Barrow the signs of depression in the hematite pig-iron trade were more acute this week than ever, and the output has been reduced still further, only 24 furnaces being now in blast compared with 35 in the same week of 1902. The steel trade keeps quiet, and most of the works, with the exception of the rail mills, are working short time. Neither is the future very hopeful, though it is expected that better trade will come in the new year, when the shipbuilding yards manage to secure a contract or two. At present they are as slack as every one else.

Tea.—The tone of the auctions was again listless this week. Indian offerings were small, 34,520 packages, but bidding was not stimulated thereby, and prices at the close of the sales were easier, averaging 7.34d. per package, against 7.64d. last week, and 7.44d. a year ago. Ceylon was no better, lower prices prevailing in nearly all descriptions except the commonest, and the average obtained for the week was 7.67d. against 7.75d. the week before, and 7.59d. a year ago. No Javas were put up for sale, and very little was done in China teas. Messrs. McMeekin publish some interesting notes on the tea trade for November, and suggest that the policy of mantaining artificial prices may not prove in the end to be the wiser one. In view of the approaching heavy Ceylon arrivals and the possibility of Budget alterations, it might have been better to have given a little encouragement to buyers and distributors.

Sugar.—Storage room at Hamburg being still scarce, there were further realisations of December sugar this week, about 6,000 tons being tendered here. Yet in spite of this the market was fairly steady, and on balance, prices for summer deliveries were about the same as last week, though December temporarily lost a fraction. There is no pressure on the part of the factories to sell either present or next crop sugars as although statistics are likely to remain unfavourable for some time to come, holders do not believe that a liberal supply can or will be grown at present prices. Visible supplies, however, are bigger than ever, notwithstanding the reduction of 1,200,000 tons in production, since, owing

to the failure of the Eastern trade, the bad fruit crops and the general agricultural and industrial distress, the consumer for the time being has left the market in the lurch. Never mind, these years of retrograde trade have been seen before, and have always been followed by years of expansion, so why should the same thing not happen again? Besides, the market hopes for much from the Sugar Convention. All the same, as Mr. Czarnikow points out, speculation on consumption is quite as risky just now as speculation on reduced sowings and the only safety of the markets is the present moderate range of prices provided it continues until the root contracts are settled. In France the tendency is to turn factories into distilleries as alcohol pays better than sugar, and if this movement becomes general, a reduction in sugar beets is certain, even though 28 francs could be got for the following crop. But this price is equal to about 11s. 4½d. f.o.b., while granulated for that delivery cannot be sold at 11s. f.o.b. Hamburg. The weather of late has been unfavourable for keeping roots, though it is too early yet to tell whether any damage has been done to the crops. Moreover, no further changes in the statistics will be attempted until the factories issue their final figures in about a fortnight's time, and even then it is not thought the results will affect prices to any extent since the crop is too far advanced. Towards the end of this week trade with consumers was rather better both in English and foreign refined, a fair quantity of old landed sugars being sold at moderate prices, parity 9s. 10½d. to 10s., and new granulated at 10s. 1½d., while refiners bought 88 per cent. at 8s. 3d., and 75 per cent. at 6s. 9d. In the States the market is unsettled by the uncertainty of the fate of the Cuban Reciprocity Bill, though the general impression is that it will be passed. Meanwhile trade is apathetic, and the few sales that have taken place went through at previous rates. Stocks are down to 100,000 tons, the meltings this week being 26,000 tons against 23,000 landed at the three ports.

MINING RETURNS.

Aladdin's Lamp (Roseda'e Mine).—850 tons crushed, 142 oz.

Brilliant and St. George.—Crushed 2,419 tons, 1,715 oz.; cyanide, £3,460.

Brilliant Central.—Crushed 3,220 tons for 2,933 oz.; cyanide, £2,252.

Brilliant Gold.—643 tons of stone, 709 oz.

British Broken Hill Proprietary.—4,510 tons crude ore produced 811 tons concentrates, containing 462 tons lead and 22,708 oz. silver.

Broken Hill Proprietary.—Refinery products—fine silver, 467,253 oz.; soft lead, 5,075 tons; antimonial lead, 60 tons.

Champion Reef Gold.—14,726 tons of stone, 15,327 oz.; 20,176 tons of tailings (cyanide process), 2,709 oz.; total 18,036 oz.

Chinese Engineering.—Coal, 15,000 tons; sales, 17,500 tons; consumption, 1,300 tons.

Day Dawn P.C. Gold.—Cyanide, 1,210 tons of tailings treated, value £770.

Dolcoath.—Tons crushed, 8,338; black tin sold, 132 tons; slimes, 4 tons.

Dundee (Natal) Coal.—Output, 7,520 tons.

Fremantle Smelter.—Shipped 177 tons lead bullion, 4,000 oz. gold and 11,000 oz. silver.

Glencoe (Natal) Collieries.—Output, 6,654 tons.

Great Eastern Collieries.—Output of coal, 14,600 tons.

Inverell Diamond Fields.—26 loads washed for 86 carats of diamonds and 833 lb. of tin.

Kalgurli Gold.—Crushed 4,535 tons, 4,196 oz.

Mount Usher.—325 tons of tailings by cyanide, 30 oz. bullion, worth £3 19s. per oz.

Mysore West and Mysore-Wynaad.—903 oz. from 2,216 tons of ore crushed.

Natal Navigation Collieries.—Output, 15,763 tons.

Natal Steam Coal.—Output, 3,400 tons.

New Options.—Victory Mine: 300 tons, 38 oz.; Lady Jane Mine: 30 oz.; Crescent cyanide plant: 10 oz. bullion.

New Queen Gold.—258 tons, 258 oz.

Ooregum Gold.—11,769 tons of stone, 5,976 oz.; 10,238 tons of tailings (cyanide process), 1,034 oz.; total, 7,010 oz.

Smelting and Refining of Australia.—Dore bullion containing 586 oz. gold, and 19,300 oz. silver; also 145 tons copper matte, containing 92 oz. gold, 10,875 oz. silver, and 77 tons copper.

Tronoh Mines.—130 tons of tin.

Mr. Francis Shipton of the London staff has been appointed secretary of the Standard Bank of South Africa, Limited.

Yokohama Specie Bank, Limited.—Mr. Yuki Yamakawa, who is a Director of the Bank, has been appointed Manager of their London branch in place of the late Mr. Y. Nakai.

At a meeting of the Extraordinary Court of Directors of the Scottish Widows' Fund and Life Assurance Society, held this day, Mr. Henry Cook, W.S., was appointed law agent in succession to Mr. J. Auldjo Jamieson, W.S., who retires from that office on 31st instant, and Mr. J. G. C. Cheyne, assistant secretary of the Society, was appointed secretary in succession to Mr. J. J. P. Anderson, who retires at same date. Mr. A. D. Lindsay Turnbull, C.A., actuary of the Commercial Union Assurance Co., Limited, succeeds Mr. Cheyne as assistant secretary.

The *World's Work* for the month is decidedly interesting. It deals more with men and less with machinery. "A Talk with John Burns" could never be dull, "The Amazing Story of Sam Parks" is a lively article on a "labour" leader of quite another sort. Lady Jeune has a vigorous paper on "Women Who Work," and the whole magazine is less ponderous in appearance than usual.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and November 28, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Nov. 28, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Nov. 29, 1902.
Balances, April 1:	£	£	£
Bank of England	—	5,887,524	8,080,383
Bank of Ireland	—	749,603	486,564
		6,637,127	8,566,947
Revenue.			
Customs	34,640,000	22,501,000	22,765,000
Excise	32,700,000	21,057,000	21,714,000
Estate, &c., Duties	13,300,000	8,461,000	9,249,000
Stamps	8,400,000	5,007,000	5,318,000
Land Tax and House Duty	2,600,000	580,000	600,000
Property and Income Tax	30,500,000	8,654,000	10,021,000
Post Office	15,300,000	8,970,000	8,730,000
Telegraph Service	3,800,000	2,560,000	2,495,000
Crown Lands	445,000	340,000	340,000
Receipts from Suez Canal Shares and Sundry Loans	935,000	580,274	579,184
Miscellaneous	1,650,000	1,023,876	1,238,890
*Revenue	144,270,000	79,734,150	83,050,074
Total, including balance		86,371,277	91,617,021
Other Receipts.			
Repayment of Advances for Bullion, &c.		220,000	389,058
Under Telegraph Acts, 1892 to 1899		410,000	630,000
Under Uganda Railway Acts, 1896 to 1902		53,000	160,000
Under Naval Works Acts, 1895 to 1903		1,219,000	2,718,000
Under Military Works Acts, 1897 to 1901		1,050,000	1,650,000
Under Land Registry (New Buildings) Act, 1900		4,000	5,000
Under Pacific Cable Act, 1901		—	1,130,445
Under Public Buildings Expenses Act, 1903		44,000	—
By Issue of Consols under the Loan Act, 1902		—	29,828,183
By Issue of Exchequer Bonds under the Supplemental War Loan Act, 1900		6,962,272	—
Transvaal and Orange River Colony—Repayment of sum voted as a temporary advance		3,000,000	—
Temporary Advances, deficiency		3,000,000	6,700,000
Temporary Advances, ways and means (including £8,500,000 Treasury Bills in 1903-4, and £7,500,000 in 1902-3)		12,500,000	12,250,000
Total		114,833,549	147,077,707
*Revenue as above	144,270,000	79,734,150	83,050,074
Payments to Local Taxation Accounts:—			
Customs	219,000	124,822	133,030
Excise	5,333,000	3,279,387	3,326,767
Estate, &c., Duties	4,110,000	2,694,633	2,743,799
Total	9,662,000	6,098,842	6,203,596
Total Revenue, including Payments to Local Taxation Accounts	153,932,000	85,832,992	89,253,670

Expenditure and Other Issues.

Treasury, December 1, 1903.

Established 1824.

CLERICAL, MEDICAL AND GENERAL

LIFE ASSURANCE SOCIETY.

Assets nearly 4 MILLIONS Sterling.

The Results of the 1902 Valuation showed—

1.—INCREASED RESERVES.

2.—INCREASED PROFITS.

THE SURPLUS DIVIDED WAS £597,415.

Chief Office:

15, ST. JAMES'S SQUARE, LONDON, S.W.

W. J. H WHITTALL, Actuary and Secretary.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

There was a rush for short credits in the beginning of the week because the Government was taking up £2,000,000 of the market balances by its new issue of Treasury bills, and loans accordingly rose to 4 and 4½ per cent. both on Saturday and Monday last. The India Council, too, got 4 per cent. for any renewals it might have to grant, as against 3¾ for three weeks the rate quoted now. Later in the week the credit market became better supplied, especially after Consol pay day, and the Bank return revealed the reason why. It appears that £2,503,000 of market money was paid back by the Bank the other day against Consols taken up. Much of this money had, gossip says, been obtained from the market outside by a very simple operation on the Bank's part. It sold Consols for cash and bought the stock for the account. The release of such a large sum sensibly affected both day and seven day rates in the latter half of the week. Whereas money cost 3¾ and 4 per cent. on Monday and Tuesday, it only commanded 3½ and often not more than 3¼ per cent. on seven day loan from the middle of the week onwards. This morning, in fact, 3¼ per cent. was the best seven day rate bankers could secure, and call money, which had sometimes been 4 per cent. or more in the beginning of the week, fell to 2½ and even 2 per cent. This great decline took place in spite of large repayments to the Bank. These were so heavy to-day that the market has only a little left to clear off on Monday.

Discount rates have been comparatively steady with fluctuations of a mere 1-16 or so till near the end of the week. We may call the quotation 3⅞ to 4 per cent. as a general rule for all dates of bank bills up to six months, which were sometimes taken at 3 13-16 per cent. Very short paper was quoted at 3 15-16 to 4 per cent., but full three months' paper rarely commanded the round figure. Business, in fact, is quite quiet and money would be cheap all round both for loans and discounts were it not for the recurring demands of the Treasury. This week it took up £2,000,000, and next week the final instalment of £4,500,000 becomes payable on the Transvaal guaranteed loan. We may therefore expect to find the comparative cheapness of credits now noticeable much less in evidence next week, and there is no real solid ease in the market at any time. Brokers to-day quoted rates all round about 1-16 per cent. weaker, and keen traders gave the quotation for six months' remitted paper as low as 3 11-16 per cent. Very short bills were done at 3 15-16 per cent., and the rate for full three months' paper was often 1-16 under 3⅞ per cent.

The Bank return, apart from the repayment of money to the market, showed nothing unusual. Altogether the market required £4,464,000 to help it over the end of the month, so that it had to borrow at the Bank £1,961,000 on other securities, and of the entire sum produced by this borrowing and the Bank's repayments £2,532,000 remained at the credit of other deposits while the Government balances absorbed £955,000, and £1,044,000 was swept off the reserve, chiefly by the end of the month currency demands.

Bullion demands have been quiet. The £500,000 odd in from South Africa at the beginning of the week was taken for the United States, but no draft was made upon the Bank. It, however, lost £325,000 in its working week ended on Wednesday, most of it withdrawn for export to Egypt, and there is more to go. Our visible stock of gold is already excessively attenuated, and nobody seems to care. The inquiry for bars, however, has somewhat lessened in the open market, so that the price which has been 78s. per oz. all week closes to-night at 77s. 11¾d. Whatever supply there may be will none the less be swept up by the foreigner.

The only call of importance in the coming week is the instalment on Tuesday on the Transvaal loan, nominally £4,500,000, the amount involved being about £3,000,000, and against this about £1,000,000 will be released on the following day in connection with the Pretoria Pietersburg Railway debenture repayment.

SILVER.

The market for bars has had to rely for support almost entirely upon the local requirements as except for a few trifling orders on bazaar account India held back. Prices gradually dwindled under very little selling pressure to 26⅛d. per oz. for immediate delivery and 25 13-16d. per oz. for future metal, but at these figures the Continent bought to a moderate extent, and as India was also tempted to come in, a recovery to 26 7-16d. and 26 3-16d. per oz. was brought about. The rally, however, was short-lived, as American holders threw out the metal freely, while all outside demand ceased as suddenly as it began, and the closing figures were 25¾d. and 25⅜d. per oz., or losses of ¾d. and 13-16d. per oz. respectively. Tenders for the Rs.60,00,000 of drafts offered by the India Council this week amounted to Rs.4,09,00,000, all in bills, and applications at 1s. 4 1-32d. per rupee received about 14 per cent. Another Rs.60,00,000 will be offered next Wednesday.

Stock Market Notes and Comments.

There is nothing to say about Stock markets this week beyond what will be found in succeeding pages. It has been a quiet week, but the "boomlet," which apparently took renewed hold of the Kaffir Circus at the beginning of the week, has again failed to come to anything substantial, in spite of the pretty steady support from Paris. We are glad that this is so, because it indicates indifference on the part of the outside public. The more it keeps away from markets, the better shall we be able to see what is really behind the still inflated prices. If a rise occurs next week, it should give many people further opportunities to sell.

We hear from various credible sources that the banks are busy working up Consols to something over 90, against the day when the balance-sheets must be struck, but are reluctant to believe any such story. If our banks are really playing this game, they are contributing to aggravate the mischief hid beneath the surface of markets. No doubt a comparatively small amount of buying dropping in upon markets day after day will have the desired effect, because there was a considerable "bear" account open, but the essential weakness will only be the more completely laid bare when the "bears" are squeezed in, and as for the morality of this kind of proceeding, or the prudence of it from the bankers' point of view, the less said the better.

Home Railway stocks continue sickly, and the Stock Exchange is not at all comfortable over the large demands for additional capital some of these companies are making. It is well understood that other similar demands must follow, and when these are added to the requirements of our municipalities it is felt that no health or elasticity can return to the investment market for many a day to come. No one, therefore, need be in a hurry to buy any of the new issues of our railways, for the probability is that prices for their debenture and preference stocks will continue to drag, and may even decline for quite a long time yet. Our liveliest market is still that for Argentine Railways, and prices there mount as if the millennium had arrived in South America, and no bad harvests or Government extravagances were ever again to be encountered. We repeat the hint given last week, that buyers who see comfortable profits on their investments in these securities would do no harm to secure at least a substantial portion thereof. They should not wait until the present stream of speculative buying slackens off, because when a market pushed ahead, as the Argentine Railway market has been, begins to dip back, it very soon in these times becomes reluctant to load up with the stock the public wants to sell.

The Week's Stock Markets.

Stock markets during the past week seem to have been swayed to an unusual extent by the diverse stories current concerning the position of affairs between Russia and Japan. At first the rumours were of a decidedly doleful character, but these soon gave place to cheerful talk, and the optimism became so pronounced that before the week expired we were treated to details of a settlement said to have been arrived at between the contending powers. The public, however, displayed not the slightest interest in anything, and whether prices moved up or down professional dealing, both here and from the Continent, was solely responsible. Consols usually led the advance when one occurred, and there has been another big blaze in the Argentine Railway market, but Yankees could not settle down to a pronounced tendency, and nobody wants to buy Home Railway stocks, in face of the constantly shrinking traffics.

Last Saturday was contango day in Consols and the price made up ⅞ better than at the previous settlement, which was well, because money could not often be obtained under 4½ per cent., and not infrequently the charge was 4¾ per cent. Prices dipped slightly at the start, but when Count Lamsdorff made a pacific statement regarding Far Eastern affairs they went ahead in fine style, and soon

recovered the quarterly dividend of 5/8 deducted on Tuesday. There was a slight pause after this effort, but quotations looked steady at the end at 88 13-16 to 88 15-16 xd. for money and 89 1-16 to 89 3-16 xd. for the January account. In some quarters it is stated that the joint stock banks are assisting the upward movement, in order to have quotations as near 90 as possible when balance-sheets are made up on December 31, and there is probability in the story. Not much was done in Transvaal scrip, which closed 1/8 easier at 2 discount, but War Loan stock gained 5/8 at 97½ xd. Childers 2½ per cent. also rose 5/8, and all Indian Sterling loans put on about ½. Amongst Home County and Corporation stocks, Bristol 3½ per cent. advanced 2, Metropolitan 3½ per cent. and Edinburgh 3½ per cent. each 1½, Liverpool 3½ per cent. advanced 1, and London County 3 per cent. rose ½. On the other hand, Leeds 5 per cent. receded 2, and Bradford 3 per cent. 1. Colonial issues were better when they moved at all, which was not often, and Cape 3 per cent., New South Wales 4 per cent., and Ceylon 4 per cent. rose 1, and Trinidad 4 per cent. put on 2.

Japanese bonds have naturally attracted a good deal of attention in the Foreign bond market, and fluctuations in prices have been fairly wide. The rather depressing news received on Monday concerning the Far Eastern position sent quotations sharply back, but when the fears passed away "bears" rushed to cover, and a quick recovery ensued. Ther was slight hesitation again before the end, and prices close without much change. Chinese loans moved irregularly, the Imperial Railway loan falling back after a good rise, and the gold bonds of 1895 leaving off 1 higher. A good deal of attention has been devoted to Brazilian and Argentine securities, with Paris inclined to play, buying of the former being stimulated by news of a good coffee crop. Prices all finish higher, although no movement exceeded 1. Chilians advanced here and there, on the reputed sale of two battleships, subsequently confirmed, our Government being the purchaser. Uruguays were always firm, and a rapid dise towards the last leaves the 3½ per cent. issue 2¾ higher, and the 5 per cent. 2½ up. In the European division Russians kept very steady, and after moderate fluctuation Spanish "sealed" bonds leave off ¾ down. Egyptian Unified continue to recede, but Portuguese, German and Turkish Unified all show fair improvement.

The Home Railway market has been in a state of more or less suspended animation all week, as far as the majority of stocks were concerned, and most of them show moderate declines at the end. North-Eastern and steam Underground lines attracted a good deal of notice, but outside these three the interest displayed was small. A meeting of employees of the first named company was held last Sunday, and although no information of what transpired leaked out, dealers grew very nervous on Tuesday. The price opened at 139½, and was quickly hammered down to 137¼, but a large portion of the loss was recovered, and it finished the day at 138½. Another ½, however, has been lost since making the decline on the week 2. Metropolitan was sought after by speculators eager for a "turn," who asserted that this and the District would benefit greatly by passengers being frightened away from the "tubes" by the latest fire on the Paris Metropolitan. The final quotation was well below the best, as the advance caused a certain amount of profit taking, but in spite of this the net gain was 1. Districts improved even more, closing 3 up, but in this case the movement was helped by the market being bare of stock. City and South London finished 2½ lower, for the reason given above. Great Western, Lancashire and Yorkshire, North-Western, and South-Western ordinary and preferred all lost 1, together with Midland preferred, the deferred of the last named being 1½ lower. South-Eastern ordinary and preferred also dropped 1, but the deferred was only ½ down, and Great Eastern dropped as much. Scotch stocks were inclined to be weak, Caledonian deferred dropping ¾, and North British issues ½ and ¾.

Yankee Railroad shares were at first disposed to weaken, owing to bear pressure in Wall Street, and liquidation

caused by the stringency of money there. The return of the Associated Banks was not liked, as it showed loans still very largely in excess of deposits, and cash reserves were down to the lowest point touched at the corresponding period of any year since 1899. Engagements of gold, however, put a better face on matters, and the "bulls" took sufficient heart to push quotations up substantially enough to bring about a demand to cover. Both the Continent and our market was said to be buying, and this helped the advance, but more likely the inquiry was the result of manipulation by New York operators. Attention has been given in turn to "Granger" and "Coaler" lines, and the efforts seemed for a time likely to meet with considerable success. Just as this market, however, prepared itself for a little "boom," a douche of cold water was administered by the overnight prices reported on Thursday morning, and prices dwindled. Wall Street propped coal lines promptly, and in spite of the set back our list still shows a number of substantial gains. Louisville rose as much as 3 on dividend estimates. Atchison issues were 2¾ and 2 higher, Baltimore ordinary and Milwaukee rose 3, Southern preferred 1½, Denver preferred advanced 2, Norfolk common 3, Reading common and South Pacific put on 1½, and Union Pacific common 3¾.

Canadian Railway securities hung in the balance for a time, as neither market nor public showed any inclination to deal pending the publication of the October figures. These proved poor, the Canadian Pacific having saved no more than $38,000 out of a gross increase of $361,000, and the Grand Trunk showing a gross increase of £50,000 and a net of £2,700. The shares of the first-named company were also depressed by liquidation in New York, which was ascribed to Berlin, but was more probably due to the report of a new issue of stock being imminent. A rally was promptly brought about, but did not last long after the report took the more definite shape of an assertion that the company is preparing to offer 4 per cent. for an amount currently believed to be £3,000,000 at 106 per cent., and that this was in process of being underwritten for a commission of 2 per cent. These terms are regarded as much too high, and the price closed with a gain of ¼ only. Grand Trunk stocks, too, recovered on "bear" covering, and the prophets are once more at work predicting a good statement for the year, notwithstanding the recurring disappointment of the monthly figures. The ordinary and guaranteed issues hardly moved, but the seconds and thirds lost ½ each. Another forecast—that of the figures for the last nine days of November—proved wide of the mark, as the increase was only £4,567, against estimates varying from £5,000 to £15,000, and the publication made the market weak at the close. A number of Indian Railway issues have met with a fair amount of attention, and many of them have been marked up ½ to 1 or even more.

Speculation in Argentine Railway issues continues rampant especially in Buenos Ayres and Rosario ordinary and deferred and Buenos Ayres and Pacific ordinary. The first-named was 1½ higher on the week at 90½, and the "bulls" are busy taking it up to "par." Pacific ordinary rose 3 and Buenos Ayres Great Southern, in which there has also been considerable activity, put on 4. Argentine Great Western preferred also advanced 3, Cordoba and Rosario preference 3, and the first debenture stock 2, while the other two debenture stocks of this company gained 6 and 5. Villa Maria and Rufino preference shares improved 6. A good deal of business was done in Entre Rios preference and the price gained 5, but in other directions dealings were on a more moderate scale. Antofagasta ordinary, preferred and deferred stocks all rose 1, Central Uruguay of Monte Video 1, and La Guaira and Caracas debenture stock 1, but Aranco first mortgage fell 2.

Apart from further severe slumps in Waterworks stocks nothing sensational happened in the Miscellaneous markets. New River new stock gave way another 25 on more adverse decisions by the Arbitration Court. Kent receded 5. Chelsea 5 per cent. preference dropped 4, the 4½ per cent. 1, and the debentures 3. Then West Middlesex ordinary receded 2½, and the debentures 1. Grand Junction "A" lost 2 and the "B" stock 1. Gas Light stock was bought at first but subsequently came on offer and closes 1 lower at 87. London and India Docks stocks were not affected by the publication of the company's proposed scheme as an alternative to the Government proposals, the deferred merely retaining an early rise of 1. Oil shares were firm, on good reports as to the condition of markets at Baku, and fractions were added here and there. Very little was done in Meat shares, and

Catering securities may be called steady, in the absence of business. Coats ordinary and preference shares were rather dull, but most Textile securities were as before. Hudson's Bays rose sharply, and close 3 higher. American Brewery shares continue to be advanced, but home concerns attract no support. Sweetmeats declined a little on another traffic decrease. The annual report is dealt with elsewhere.

The only thing to mention about Stock markets to-night is that to-morrow will be a Stock Exchange holiday. Very little was going on, but prices were tolerably steady, and everybody was disposed to be cheerful. The Johannesburg loan is said to be exciting little interest here, but good subscriptions are coming in from abroad. Other new investments offered to the public are meetng with little attention.

MINING NOTES AND NEWS.

We cannot say we have been truly happier this past week than a week ago. Every possible effort has been made to hoist quotations, but, for some reason or other, the blessed figures have hardly budged. In the early part of the week it was declared that Russia and Japan were scowling at each other with a darker, more threatening scowl, and nerves in London shivered in consequence. This helped greatly to paralyse all energies, punters and others growling that under the circumstances it was of no use attempting to put quotations higher; they might as well be left to look after themselves. Reported strikes on the Jupiter and Simmer West mine utterly failed to stimulate outside business. Nor did the market enthuse when told the joyful news that the main reef has been struck in the No. 4 borehole, of the Welgedacht at a depth of 2,842 ft., for the public are absolutely indifferent to good seasonable news of this kind, and it is difficult to say what they do want. It is true borehole strikes are not profits and dividends, and, perhaps, may never be, but is it not better to have a borehole strike than nothing at all? We may, on the strength of it, be able to buy some Welgedachts and sell them to the other fellow at a higher figure, and that is whence our "profits" will come. Nor does this exhaust the week's joyful news, for has not the Geldenhuis Estate Company declared an interim dividend of 30 per cent.? What is better still, perhaps, Sir Arthur Lawley has been haranguing in Johannesburg, at a feast, and to his fellow banqueters vividly described the beautiful visions he saw. One of those was the condition of the mining industry, which he eloquently described as a "tremendous issue," not to one person, but to the whole world. Development depends entirely upon the solution of the labour problem, and if the Legislative Council becomes satisfied that it is essential to the interests of the country, and in accordance with the wishes of a majority of the people, legislation authorising the importation of aliens will be introduced, but no legislation will be passed which will not ensure the certain repatriation of indentured labour. Even these moving sentiments have not made us jubilant or even moderately cheerful, and we are merely as satisfied as we can be that prices do not fall. Russia and Japan, we hear, are not glaring at each other with their accustomed ferocity, and our suspense is lightened accordingly, but we can never foresee what changes of mood and attitude these alleged deadly foes may suddenly assume, and we must hope for the best. At any rate things are looking brighter, or should be.

Latest advices from the Jupiter state that at a depth of 3,907 ft. in the cross-cut of the Catlin shaft, from which a borehole was sunk, the south reef was struck at a depth of 90 ft., a width of 4 in., assaying 17 oz. 3 dwts. per ton, and 2 ft. 4 in. assaying 9 dwts. per ton. Further reefs were struck in the borehole at 117 ft., a width of 6 ft., and at 119 ft. a width of 5 ft. 2 in., the assay values being poor. Boring is being continued and it is estimated that the South reef will be struck in the shaft at a depth of 4,150 ft. Expectations have not been exactly fulfilled as regards the depth of striking the reef, but, as in the case of the Robinson Central Deep, the assays are phenomenally high, and are not likely to be uniform. The capital of the company is £600,000, and it is intended to equip the mine with a mill of 200 stamps.

On Saturday last was issued the minority report of the Labour Commission, signed by Messrs. Quinn and Whiteside. These gentlemen express their opinions that there is sufficient labour in Central and Southern Africa for present requirements, although an effort will be required to obtain it; that the present so-called shortage is due to temporary and preventible causes; that there is sufficient labour in the above territories for future requirements; and that in many ways the supply of native labour can be supplemented or superseded by white labour. The report adds:— "There is a fundamental difference between our conclusions and those of the majority. The latter accept without question, and as a whole, the evidence of the Chamber of Mines, while we, after close scrutiny, find ourselves unable to do so." According to the *Times* correspondent, "the chief object of the report is to invalidate the evidence of the Chamber of Mines, the policy of which is said to be directed to the perpetration of a system of labour by an inferior race, obtained by the importation of Asiatics. This is opposed to the growth of a large British working population."

The two commissioners estimate the number of natives required for agricultural purposes at 55,000, as against 77,000 given in the majority report. They find that the evidence regarding the requirements of the mining industry is conflicting, giving as an example that, whereas the Chamber of Mines states that twenty natives per stamp are required on producing mines, other evidence points to ten or twelve as sufficient. The Chamber refers to the Rand Mines as being of so low a grade, compared with other countries that only by the agency of cheap coloured labour can they be profitably worked. Other evidence goes to prove that in other countries mines are worked with less than half the number of labourers, and with greater economy. The Chamber considers there is no prospect of materially lessening the requirements of the mines by improvements in methods and machinery or by the more extended use of white labour. Other evidence distinctly thought this possible. A large portion of the report is devoted to quotations to prove that the evidence given by the Chamber of Mines conflicted with the recorded opinions of some witnesses before the Commission was appointed, of witnesses in the same employment since 1897, and of a few independent witnesses. After a long reference to the report issued in November, 1902, by three mine managers appointed to investigate Mr. Cresswell's experiment with white unskilled labour in the Village Main Reef Mines, which indicated that the use of white labour in certain branches might be profitably introduced in mines, the Commissioners are "most reluctantly forced to the conclusion that, finding it unreliable in such particulars, as without professional knowledge we were able to test, the evidence of the Chamber of Mines must be regarded as untrustworthy." On the strength of other evidence, therefore, they consider eleven natives per stamp a fair estimate. They place the actual legitimate requirements of the Rand Mines at 75,000 natives, and the total needs of the Transvaal at 259,950, as against 403,328 estimated by the majority report. The temporary and preventible causes are explained to mean the war, the reduction of wages, and the unsatisfactory state of some mine compounds, while the Commissioners advocate, as an assistance to the labour supply, the abolition of Government locations and the enforcement of the Squatters' Law. With regard to their third finding, they explain that the mineral wealth of the Transvaal should be worked in the interests of the people of the Transvaal, to whom it belongs, and this would be best secured by regulating the development of the country by a combined supply of white and African labour. "It is in no one's interests that the necessary labour should be obtained without effort." Surely this is common sense. But just because it is it cannot serve the ends of the bosses who live by "booms" on the share market.

Reuter's agency understands that Mr. F. Perry, chairman of the Witwatersrand Native Labour Association, who arrived in England a week ago from South Africa, is leaving for China by the next mail, and will return to South Africa in April next. During his visit to China he will study on the spot the various questions connected with the emigration of Asiatics to the Transvaal. He will first visit Hong Kong and then probably proceed to the Chinese ports. The same agency says it is also informed that there is no truth in the statement that the first batch of Chinese will be on the Rand in February next. No arrangements have been concluded at present for the recruiting or shipping of Celestials.

The *Financial News* says it is reported that labour for the Rand Mines is to be made available from Belgium, France, and Germany; that a scheme is afoot, sanctioned by the French and Belgian Governments, to transport a large number of the unemployed miners in these countries to the Cape for the next three years, the Governments stipulating not only that homes should be found for the miners and their families while in Africa, but also that their return passage money shall be assured at the end of that time. The syndicate is stated to be about to propose to some of the leading mines that they should lease to it the whole of the mines for the coming three years, either at a fixed rental or on a royalty on all the ore taken out. We reproduce this rumour for what it is worth.

Manipulators in the West Australian market have relaxed their efforts, being desirous, probably, of taking a rest from their labours whilst they see circumstances are unfavourable, and the public in no mood to join in the game of speculation. So instead of prices marching upwards in stately procession most of them have come to a dead halt, whilst others have retreated a fraction or so, ready, at a moment's notice, to ascend higher on the usual prod from below. Meanwhile there is an interesting contest proceeding between the Kalgurli and the Associated. It is a pretty quarrel—not the first of its kind in this market—as to which mine will get the extension of the Northern-Blocks-Oroya ore chute. Opinion inclines to the belief that the Associated will be the favoured one, but the present uncertainty gives a good excuse for gambling in these particular stocks, and they have been the only shares that have attracted any attention this week. The Kalgurli report has been issued, but it makes no reference to this matter. On the whole Westralian prices have weakened.

In the midst of this general sluggishness West Africans, like the eccentrics they are, have taken it into their heads to advance, the majority of the shares closing higher on the week. This is not the result of any special news, for there has been an absence of such of any description, but it is one of those inconsequential events observed now and then in Throgmorton Street.

Several miscellaneous shares have strengthened, such as Mysores amongst Indians, one or two copper shares, with Tintos, Strattons and Broken Hill Props.

Stratton's Independence.—It was but a few months ago the directors of this company issued their annual report to the end of June, 1902, this week they have hurried up to such a tune that we now have the accounts to the end of June, 1903. Why this reform? At the recent annual meeting, readers will recall, the shareholders roused themselves to stormy opposition, and there may be some connection between their attitude and this unusual celerity on the part of the directors. Twelve months has brought about a great change, for the net proceeds of the sales of ore, after allowing for freight and treatment, have fallen from £312,026 to £221,483, and as receipts from other sources also show a slight shrinkage, the net profit on the actual working is only £48,157 against £129,355. There was a falling off both in the ore production and in the value per ton, but this has been offset by an appreciable reduction in expenses. After allowing for interest and transfer fees and deducting London office expenses, the net credit is £49,885, which compares with £125,035, and this small profit has to be charged with the income-tax liability of £13,298. The directors, it will be remembered, refused to pay a dividend out of last year's large credit, but subsequently had to submit to the clamours of the shareholders by distributing 1s. per share in August last, which reduced the credit from £97,400 to £47,399. Adding to this the present net profit of £36,587, the available total is £83,986. Benefiting from their recent experience, the directors now recommend a dividend of 6d. per share, which will require £25,000, bringing the total amount distributed since the incorporation of the company to £829,172. What the shareholders principally objected to was the lending of £89,831 to the market, and the directors now intimate that this sum has been called in and placed on deposit in the bank, the company being in a strong position financially. A considerable further sum has been provided from the cash reserve in pushing the company's case against the late Mr. Stratton's Estate. "As the preparations have proceeded," says the report, "new developments and openings in our favour have become apparent. To these Mr. Hammond and our lawyers and technical advisers are giving their earnest attention, and no effort is being spared to press on the matter. According to the latest advices received our case is considered a strong one, and we anticipate a successful issue. The shareholders' patience, however, must be exercised, as some further time will be required before the final stages can be reached." It is added that the report of Mr. John Hays Hammond has been unavoidably delayed, but he has promised to send a statement bringing up the position of the mine to the month of December.

Henderson's Transvaal Estates.—Shareholders are likely to be greatly disappointed with the report and accounts of this South African company for the twelve months to the end of June. As this company depends chiefly upon market operations for its income and profits, and the market has been depressed throughout that period, nothing was to be expected but an appreciably diminished income. This time the profit on shares sold was only £52,813, and the net profit, £57,474, the latter comparing with £127,952, out of which the directors paid a dividend of 7½ per cent. Adding the sum of £16,267 brought in, the total credit is £73,742, which is carried forward, no dividend being paid this time. The sum lent to the market is down in the balance-sheet at £137,246, reduced from £335,976. Cash has diminished from £68,131 to £21,974, so that the aggregate of these sums is only £159,220, compared with £404,107. A part of this has evidently gone to increase the stocks and shares, whatever they may be, an asset that has swollen from £84,545 to £269,468. Then an additional £39,909 has been lent to Henderson's Consolidated, increasing that subsidiary's indebtedness to £266,763. In the same company the parent's holding has increased from 1,991,864 to 1,992,200 shares, valued at £1,245,125. The auditor reports that the shares and investments taken at cost were greatly exceeded by the market price at the end of June, and it would be interesting to know to what extent they have depreciated since. It might be mentioned that the balance of Henderson's Consolidated shares of 7,800 at the end of June, held by other people, has since been reduced to 2,800 shares, showing that outsiders are getting rid of them as quickly as possible.

Glen Deep.—This is one of the subsidiaries of the Rand Mines, Limited, and during the twelve months ending July 31, it was able to keep at work only 60 out of its battery of 100 stamps. These crushed 104,609 tons, the total yield from the mill and the tailings being 40,439 fine ounces, or nearly 8 dwts. per ton, yielding a total revenue of £169,300, an average of £1 14s. 4d. per ton. This shows an increase of 3s. 6d. per ton over the preceding year. Working costs absorbed £128,360, or £1 4s. 6d. per ton, a few pence more than in 1902. Thus the working profit was £40,939, but, as usual, no provision has been made for depreciation. After deducting £5,825 for interest, £35,114 is carried to the appropriation account. The latter is credited with £81,569, representing the retransference of capital expenditure in excess of working capital, and debited with the old loss of £60,304, £2,764 for Government taxes, £52,714 spent on capital account, and one or two smaller sums, leaving a credit of £35,114 to be taken to the balance-sheet. The parent company has advanced £72,100, there is an overdraft of £3,507, £9,135 is owing to sundry creditors, and £2,267 is the amount due to the Government for tax on profits, against which cash totals a paltry £169, with £84 on deposit, and £153 in the National Bank of South Africa. Gold consigned is valued at £14,975, and debtors owe £1,419. The interest charged by the generous parent is 7 per cent.

East Rand Mining Estates.—The report and accounts issued this week cover a period of only nine months, and are brought down to June 30. Since its formation the principal work carried out by the company consists of boreholing. No 1 borehole was started on the farm Grootvlei in September of last year, and the drill encountered the Van Ryn reef at a depth of 3,412 ft., the thickness of which was 21 in. and the assay value 1 oz. 1½ dwts. Dr. Hatch, the well-known geologist, says he regards the result as satisfactory, whilst the directors look upon the thickness of the

reef and the depth at which it has been struck as favourable factors. No. 2 borehole was started on May 19 last, and has now reached a depth of 2,045 ft. On the farm Palmietkuil three boreholes have been put down. No. 1 was stopped at a depth of 1,040 ft., Dr. Hatch being of opinion it was too far to the east to encounter the reef. The second borehole was continued to a depth of 3,000 ft., and was then suspended, whilst the third borehole has reached a depth of 1,350 ft. The results of the boring operations on this farm are being awaited with the greatest interest, says the report, "as they will tend to throw considerable light on the subject of the reef formation in this neighbourhood, and the trend of the Van Ryn reef to the east of the Geduld and Grootvlei areas." Meanwhile during the nine months the company received £3,057 from interest, £853 from farm revenue, and £269 from transfer fees, but the expenses exceeded the total by £3,193, which is reduced to £2,128 after deducting the credit brought in. As large a sum as £92,000 is lent out by the company, and it retains £5,937 in cash, debtors owing £2,585. Creditors appear for £8,445, and contingent liabilities on shares amount to £25,416. Shares in other companies are valued at cost at £37,695, the auditors remarking that they are unable to verify this figure.

Queensland Mining in 1903.—A comparative statement of the yield of gold in Queensland during the nine months ending September 30, 1902 and 1903, has been issued by the Under-Secretary for Mines. The yield of gold for the first nine months of 1902 was 601,549 crude ounces, equal to 441,670 fine ounces, of a value of £1,876,196, whilst for the nine months of the current year the output was 661,990 crude ounces, or 478,628 oz. of fine gold, valued at £2,033,174, an increase of 60,441 crude ounces, and 36,958 fine ounces, and of £156,978 in value, so the Colony exhibits undoubted signs of progress. Dividends for the nine months of 1902 amounted to £609,745, and for the same period of this year, to £700,158, an advance of £90,413. The Charters Towers mills returned a total of 303,905 oz. of gold for the latter period, and £319,250 was distributed in dividends, an increase of £28,296. In spite of it all, however, there is little or no market for Queensland mine shares, which do not attract the gamblers like Kaffirs.

Consolidated African Copper Trust.—This company was formed in February of last year, with the large nominal capital of £600,000, of which £474,500 has been issued. Some 527½ mining claims were taken over, situated in various districts in Rhodesia, together with two coal grants and a copper grant in the Victoria district, and the right to peg 1,000 mining claims and two coal areas north of the Zambesi River. In so short a time, therefore, revenue from actual mining work has not been possible, and may not be possible for many a year to come, seeing the vast amount of development work still to be done. The first report and accounts have been issued from the date of formation to the end of June, the accounts consisting of a balance-sheet only. The administration outgo in London and South Africa totalled £4,639, whilst £3,638 came into the company's coffers from transfer and other fees, leaving a balance of expenditure of £1,000. At present the major portion of the company's funds is lent out to the market, to the extent of £65,000, so that it may be said the company is comfortably off for liquid resources, not having had time as yet to spend them.

Kinta Tin Mines.—In the twelve months to the end of June a total production of 2,812.49 piculs, or 167½ tons of clean ore dressed ready for market, is the record of the year's work. The net sum realised from the sale of ore was £12,183, whilst rents from monitors brought in £5,026. After allowing for outgo, including 25 per cent. written off preliminary expenses, about four per cent. off property account, 10 per cent. off buildings, and 50 per cent. off tools and plants, the net profit is £6,076. Two dividends of 1s. per share each, have been paid, absorbing £6,000, leaving only £76 to be carried forward. This is running it somewhat fine, as the company's financial position is not too strong, the available assets just about balancing the current liabilities. The latter include a loan of £2,500 from the bank, which, it is stated, has since been paid off. It is important to note that the general manager estimates the life of the propery at the present rate of working at about 20 to 25 years.

Grand Champion (Manicaland).—This is a company that can boast of possessing some 430 claims in Rhodesia, and already the reefs in them, or supposed to be in them, have been christened by some twenty-six striking names, so progress of a sort has been made. It has not come to gold winning yet, but it may do in the by and bye, if shareholders are patient enough to wait. The report—a brief one—covers the year to the end of June, from which we learn that operations were commenced on the Grand Reef and Champion claims—modest appellations these—in April last. The work on the former, however, has been confined merely to clearing out, unwatering, and re-timbering the old shafts, whilst on the latter three shafts have been sunk on old workings, which have not yet been bottomed. Some shares were sold, bringing in a profit of £3,428, and an income of £994 was derived from interest on loans and deposits, the net profit on the year being £750. As £13,381 was brought in a credit of £14,131 has accumulated. The company is in a comfortable financial position.

Revue (Manicaland) Gold Mining Company.—Only development and prospecting work was done by this company in the twelve months to the end of last June, the gross revenue being something like a record, viz., 13s. 6d. from transfer fees. So another heavy loss has to be faced, this time of £3.839, and adding this to the old one of £2,438, there is now an accumulated debit in the balance-sheet of £6,277. Moreover, the company is in a deplorable position financially, for against current liabilities of close on £30,000, the only fingerable assets are cash, £959, and sundry debtors, £277. The issued capital is £185,400, out of an authorised capital of £250,000, so the directors may attempt to sell some of the reserve shares, or may advise reconstruction. At the Revue Reef work has been confined to the 650 ft. adit, but the directors "regret to state that the results compare somewhat unfavourably with those reached at the upper levels."

Salisbury and District Merchants and Development Company.—We learn from the report of the directors for the year to February 28 that "the conditions of trade in Salisbury and Rhodesia generally have not improved since the cessation of hostilities, as might reasonably have been expected. The war in the South was in progress during three months of the period," but the directors are pleased to inform the shareholders—they're easily pleased, it seems—"that, notwithstanding the adverse conditions prevailing during the year, only a small debit balance is shown by the accounts. The gross profit on trading was £2,005, and the profit on the sale of stands, £4,418, and after deducting outgo and provision for depreciation, the net credit is £2,593. As a loss of £3,073 was brought in, the debit is reduced to £480. Liquid assets only slightly exceed the current indebtedness, so the company is not in too comfortable a position.

Kalgurli Gold Mines.—In our mining notes last week we drew attention to the strength recently exhibited by the shares of this company on the market, and this past week the report and accounts to the end of July have been issued. It was the general anticipation that these would be of a satisfactory character, and so they prove to be, for an excellent record is presented. The total amount of ore treated was 45,127 tons, for an extraction of 44,261 oz., compared with 22,060 tons and 24,842 oz. in the previous year. This gold realised the substantial sum of £170,381, additional revenue being £496 from interest and discount, and £108 from registration fees. After deducting expenditure and large sums written off for mine development and depreciation there remains a net profit of £67,451, out of which £60,000 has been distributed in dividends, working out at 50 per cent. In respect of the current financial year, two interim dividends have been declared at the old rate, the monthly output showing gradual increases. It is reported that the developments at the 1,000 ft. and 1,050 levels continue most satisfactory, whilst the general manager estimates that at the end of September last there was approximately sufficient ore opened up to supply the treatment plant for five years. The directors have under consideration the question of increasing the crushing power. There is no fault to find with the company's financial position, for liabilities total some £10,180, against loans amounting to £16,500, gold in transit £19,946, debtors £1,609, and cash £2,158. The shareholders will be pleased to see that the directors have succeeded in cutting down working costs.

Merton's Reward Gold Mining Company.—This West Australian company issues its first report and accounts for the period ending June 30. During the year 2,678 tons of ore were treated, yielding 3,314 oz. of gold bullion, the proceeds totalling £13,253, an additional sum of £431 being received from interest on deposits. The profit and loss account is debited with £23,637, written off mine development, with ten per cent. allowed for depreciation on plant, and, in addition, the whole of the formation expenses, amounting to £1,751, has likewise been wiped out. Consequently a debit of £24,329 is carried to the balance-sheet. Liabilities are moderate, and the company possesses plenty of cash. The report of the general manager states that a vein of quartz, 12 in. wide, and worth 13 dwts., was intersected by the 300 ft. west cross-cut, and the prospects here are described as "decidedly encouraging." It is added that "a large amount of rich ore has been opened up."

Mysore Reef and General Exploration Company.—As this company was formed as recently as July, 1902, the present report and accounts to September 30 cover a period of a little over fourteen months. The directors have acquired prospecting rights over a portion of the Egyptian Mines Exploration Company's area in Egypt, and already a shaft has been sunk to a depth of 410 ft., and some development work done, the reefs showing in places high assay values. Accordingly the directors have come to the opinion that a company should be formed, with a substantial working capital, to acquire and work the Um Rus mine. The Indian property has been taken over, and a sum of £605 received for water rent, etc., and out of this £172 has been paid in charges. No profit and loss account is yet issued. The company has £23,673 in cash.

Ouro Preto Gold Mines of Brazil.—There was an increase in the quantity of mineral dealt with during the past year, 75,809 tons being crushed, compared with 67,792 tons, the sales of gold bringing in £95,583, rents £216, interest £178, and transfer fees £4, leaving the small profit of £3,141 on working account. A balance of £6,473 was brought in, and after allowing for depreciation, debenture interest, preference dividends, income-tax, reserve allocation, and a dividend of 6d. on the ordinary shares, a credit of £1,218 is carried forward.

St. John del Rey Mining Company.—In the first six months of this company's financial year, from March to August, 77,666 tons were raised, and 72,088 tons crushed, the yield from which realised £142,195, the total recovery being 39s. 3¾d. per ton. Deducting duties, charges, working costs, London expenses, etc., the profit remaining is £32,924. Out of this £13,000 has been transferred to suspense capital account towards the cost of new works. Debenture interest took £4,253, a sixpenny dividend £14,282, and income tax £1,300, a credit of £756 being carried forward, after including the amount brought in No accounts are issued.

North White Feather Gold Mines.—The directors have been in no mad hurry to issue the report and accounts to the end of last March. During the twelve months they managed to win

enough gold to realise £14,462, the gross revenue being returned at £14,836, and the net profit at the modest figure of £286. Instead of dividing the latter amongst the shareholders, and thus making their fortunes at a stroke, the directors have employed it in the reduction of mine development. The company was in penurious circumstances at the close of the financial year, for its floating debts amounted to £3,921, its available resources consisting of £20 in cash, £40 owing to it, and some bullion valued at £1,153. The quantity treated was 4,609 tons, yielding 3,115 oz. over the plates, with 5,602 tons treated by cyanide for a recovery of 906 oz. It is doing much better now, however, so it may be able to keep its head above water.

New Zealand Crown Mines Company.—This company has in recent years been enjoying a fair amount of prosperity, and has had another excellent year to August 31, when it recovered enough bullion to realise the sum of £80,463, interest and dividends on investments bringing in £977, and leaving a net profit of £21,540, depreciation being allowed for to the extent of 10 per cent. The sum brought in was £10,203, making an available balance of £31,743, out of which a dividend of 1s. 6d. per share, the same as in the previous year, is recommended. This will absorb £15,000, and after deducting the directors' percentage of profits—£750—there remains a balance of £15,992 to be carried forward. An excellent balance-sheet is issued, and prospects still look hopeful.

Abbontiakoon Block I.—Mr. W. R. Feldtmann has written a lengthy report on the property of this Jungle company. So far only one gold bearing deposit is known to exist on the property, and it is described as a banket reef of the same type as the main reef series of the Rand, though there is nothing whatever in such a fact to excite enthusiasm. The average of a number of samples taken is 20 dwts. to the ton, or 16 dwts. of fine gold. "Taking the reef," says the report, "over the maximum length at present exposed of about 1,000 ft., it may be expected, if it maintains its size and value, to yield for every 100 ft. of depth, about 25,000 tons of ore. The value of this, calculated on the values of No. 1 level south, and No. 2 level north drives (on which the length is calculated) works out at 17.8 dwts., or somewhat below the grade of the existing ore reserves as a whole. For a year's sinkage this would correspond to over 60,000 tons of mill dirt, and would call for crushing plant equivalent to a 40 or 50-stamp mill, even in the improbable event of the length of pay ore not being of greater extent than is exposed by existing workings." Mr. Feldtmann anticipates no difficulties in the metallurgical treatment of the ore, and he gives advice as to the best plant to employ. Having regard to the exceptionally consistent run of widths and values so far exposed, the absence of faults and to the favourable conditions generally, he classes the mine, "as a very safe and profitable venture." Perhaps we shall have a Jungle boom now? Perhaps.

Egypt and Sudan Mining Syndicate.—A circular issued by the directors states that the financial year of the Syndicate ended September 30, and it is hoped to issue the report and accounts early in January. Meanwhile they desire to announce that the operations on the two concessions over which prospecting licences are held are being actively proceeded with, and that the prospects of the Sudan concession continue of a most promising nature. The annual report is to be accompanied by a voluminous report by Mr. Arthur Lleweilyn, one of the company's engineers, on his inspection of the Sudan concessions. Negotiations are proceeding with the Sudan Government for a mining lease over an area to include the Om Nabardi mine, and for a renewal of the prospecting licence over the remainder of the property (some 22,000 square miles in extent) from September 1, 1904. The directors contemplate, as soon as these negotiations have been concluded, the formation of a strong company to acquire from the Syndicate the whole of its rights attaching to the Sudan concession, and it is proposed to launch the company early in the new year. The managers of the Syndicate are Messrs. John Taylor and Sons.

Australasian Gold Mining Company.—This is another company still in the toddling stage, unable to present a profit and loss account, the total expenditure during the year ending June 30 being £5,710, and the receipts from sales of gold and transfer fees £2,986, showing a balance of outgo over income of £2,724, which is capitalised. Operations have been directed chiefly to the development of the eastern reef at the 950 ft. level. The results have not been uniformly satisfactory, for although at times the reef has presented an encouraging appearance, yet if crushed as a whole, it would have averaged only a few pennyweights of gold to the ton. The cross-cut at the 950 ft. level was extended to the eastern boundary,w ith the object of intersecting another reef, but without success, so prospects look somewhat uncertain. Current liabilities are nothing to speak of, whilst cash at the end of June amounted only to £1,476.

Lomagunda Development Company.—In the twelve months to the end of June the directors of this Rhodesian Company made a profit of £15,675 on the realisation of shares and debentures. They have likewise credited the profit and loss account with £4,484, representing the premium on 2,518 shares issued during the year. Interest on loans, stocks, and debentures yielded a total of £3,387, and transfer fees produced £177. After allowing for outgo and depreciation the profit is £19,260, increased to £55,338 by the addition of the sum brought in. An interim dividend of 20 per cent. absorbed £44,070, and the percentage of the directors' profits, £3,422, leaving £7,846 to be carried forward. Loans in the balance-sheet total £43,421, cash amounts to £6,059, sundry debtors owe £3,315, whilst shares and debentures are valued at cost at £175,947, floating liabilities being £7,571. The report says the market value of the above shares and debentures at the end of the financial year was £661,407, and they consist for the most part of holdings in the Ayrshire Gold Mine and Lomagunda Railway Company, and the Consolidated African Copper Trust.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Peninsular and Oriental Steam Navigation Company.

The final dividend and bonus declared by this great shipping company for the year ended September 30 last came as a surprise to shareholders and market operators alike. After the rather gloomy tone of the interim statement issued in June it was not expected that the company would maintain the 13 per cent. paid for the previous twelve months, and the deferred stock was allowed to fall to the neighbourhood of 200. Happily for proprietors, however, the directors are again in a position to add a 3 per cent. bonus to the regular 10 per cent. dividend, and the announcement was followed by a 25 point rise in the company's stock. The condition of the freight market has been notoriously and universally unfavourable during the past year, and it is a little remarkable perhaps that the receipts under this head have shrunk by only £66,000 to £1,771,244. As a matter of fact the deficiency would have been considerably larger but for certain exceptional earnings especially in the directon of transport work. Indian trade was good in bulk, but rates proved extremely low, and the heavy fall in the silver exchange greatly interfered with the trade between India, China, and Japan. On the other hand, the China-Japan line running from London did quite as well as last year. Australian business marked a further decline owing, it is said, to the effect of the prolonged drought. Passenger returns dropped £51,600 to £167,308, and this the directors ascribe to the reduction of fares, the removal of the 10 per cent. surtax imposed at the time when coal rose to an exceptional figure, and to the advantage accorded to the public by the extension of time for return tickets to a period of two years. There has been, however, a slight falling off in the receipts from the high point reached two years ago, which is almost entirely due to diminished traffic with the Australian colonies, and the hope is indulged that the recovery of a certain measure of prosperity in these colonies since the drought ceased will tend to a favourable reaction, so far as shipping interests in general are concerned. The African transport work in which several of the company's ships were almost continuously engaged for upwards of two years happily came to a close some months ago so far as this company was concerned by the discharge of the four vessels which were still employed in this way when the interim report was issued. More recently the directors tendered for and secured at sufficiently low rates, the regular Indian transport work, which begins in October and ends in March, and four boats are now under charter to the Government for this employment. Including a slightly larger sum brought forward, Government contract services £337,049, and interest and discount £69,113, the revenue from all sources was £3,103,456, or only £109,592 less than in 1901-2, a deficiency that is almost set straight by a saving of £91,961 in the coal bill, due in great measure to low freights. Altogether navigation cost £1,204,885, a drop of about £96,000 compared with the previous year, other big items being provisions £298,680, Suez Canal dues £278,778, general administration at home and abroad £197,116, and ships' repairs, stores, and general maintenance £227,573. Allowance for depreciation of fleet is £320,346, and the directors place £250,000 to reserve, making it £1,250,000. In connection with this allocation it is observed that the company has been the sole insurer of its fleet for half a century, with profitable results. But the cost of the large vessels of the *Moldavia* type is beyond the amount, not merely of the average, but of the highest risk borne hitherto by the company, and the question naturally suggested itself whether it would be desirable to make a special provision towards this risk or to insure a portion of the same outside the company. After mature consideration it was decided to continue the insurance on the lines hitherto adopted, and strengthen the reserve accordingly. Debenture interest having been met with £49,262, the sum remaining is £219,997, from which interim dividends took £69,600. As already announced it is now proposed to pay the balance of the preferred dividend, and a final dividend of 6⅔ per cent. on the deferred stock, together with a bonus of 3 per cent., making, on the latter, 13 per cent. for the year, and leaving £11,197 to be carried forward. Various additions have been made to the fleet during the year, and three vessels were sold, leaving the tonnage, including one ship building, at 351,433 tons. After deducting depreciation these are valued at £3,319,551, or about £9 8s. 11d. per ton, against £8 16s. 1d. last year, and £9 9s. 8d. in 1900-01, but in considering the past year we must not forget that in addition to the depreciation allowance, £250,000 was placed to reserve. As already mentioned that fund now stands at £1,250,000, and there is a depreciation account of £250,000, or £1,500,000 in all, and the position is one of great strength. The company's floating debts amount to £427,162, against bills receivable, cash, and investments, an item we should like to see segregated, £2,152,185. The company has got its new charter, our heaven blessed Government naturally stipulating that it shall ever remain a British concern "in name and in reality."

The Rock Island Company.

This "holding" company, as the American phrase is, must not be confounded with the Chicago, Rock Island, and Pacific Railway Company, for it is merely a new finance corporation, modelled upon others similar, and whose object is to gather into one control a more or less extensive mileage of railway now worked by

separate corporations. This Rock Island company, for example, has bought enough of the Chicago, Rock Island, and Pacific Railway Company's stock to give it the mastery over that big line, and has added thereto the Choctaw, Oklahoma, and Gulf Railroad, the Chicago, Rock Island, and Texas Railway, the Chicago, Rock Island, and Mexico Railway, the Chicago, Rock Island, and El Paso Railway, and the Choctaw, Oklahoma, and Texas Railroad companies. In the aggregate these various corporations work 7,123 miles of line, the Rock Island and Pacific Company alone possessing 5,579 miles of single line, besides 283½ miles of double line, and 1,046 miles of sidings. This railway alone possesses any double track, and one may say that about 7,000 miles are mere single tracks, upon the greater part of which an enormous amount of additional capital must be spent in the course of the next twenty years, if they are to keep pace with the growth of population and business. At the date of the first annual report of this Rock Island controlling company, June 30 last, nearly 600 miles additional were in course of construction and these also are single tracks. Coming to the revenue, it appears that this Rock Island Company altogether obtained $2,166,000 from dividends on its stock in the Rock Island Company, and $8,290 from other sources connected therewith. After paying three quarterly dividends upon its preferred stock it had $503,000 left. The other accounts of the Rock Island and Pacific Company's dependent lines and all the auxiliary companies named above are lumped together, and we only get summary figures, which show a net revenue of $7,495,592, after meeting taxes, rentals, and interest upon the bonded debt. Out of dividends paid by the Rock Island and Pacific road the share in which collected by the Rock Island Company is mentioned above, $1,134,190 went to the public in dividends on the Pacific road's stock, and at the end of the year there was a surplus of $4,947,527, out of which $2,104,544 was spent on additions and improvements. A number of statistics and details of the character of the traffic are given, together with the balance-sheet of the Rock Island system, but they possess at present comparatively little interest for people here.

Bengal Nagpur Railway Company.

This company's report for the six months ended June 30 states that within this period debentures amounting to £1,234,400 bearing interest at 4 per cent. became due, and were renewed at the rate of 3¾ per cent. at a discount of ½ per cent. This discount amounting to £6,172 was met from premiums received on previous issues of debentures. The directors, moreover, were obliged to borrow £335,224 from the Secretary of State, making the total capital raised £16,894,564. Mean mileage worked was 134.68 miles in excess of the corresponding period, owing to the opening of extensions, and the gross earnings improved Rs.4,82,770 to Rs.83,26,840. On the other hand, however, the expenditure rose Rs.6,48,774 to Rs.42,43,261, leaving the net earnings smaller by Rs.1,66,004 at Rs.40,83,579, the ratio of outgo to income being over 5 per cent. higher at 50.96 per cent. Passenger traffic fell off 100,007 in numbers, and Rs.65,192 in revenue, the decrease extending to all classes except the first, but goods traffic gave Rs.5,34,477 more, as the result of handling an additional 96,925 tons. Increases occurred in coal, cotton, myrabolams (a dye), grain and pulse, and some other food grains, metals, kerosene oil, til, provisions, railway materials, salt, sugar, and mola, against declines in rice, wheat, linseed and rape, and mustard seeds. The advance in the working expenses is partly incident to the increase in mileage, but is more particularly due to heavy charges for maintenance and renewals of permanent way, repairs of stations, bridges, and buildings on the old line, and repairs to rolling stock. After an adjustment of outstandings, the net earnings were Rs.40,19,781 against Rs.42,49,583, and as guaranteed interest was Rs.2,58,179 higher at Rs.43,43,593, there was an excess of interest over earnings of Rs.3,23,812, against a balance of net earnings of Rs.1,64,169, at the end of June, 1902. Under the contract with the Secretary of State surplus profits depend on the net earnings for a whole year exceeding the guaranteed interest for the same period.

H. H. The Nizam's Guaranteed State Railways.

Again this railway reports an increase in gross earnings, the total revenue for the six months ended June 30 being Rs.26,57,801, or Rs.2,28,672 more than in the corresponding period of 1902. Working expenses, however, were up Rs.1,29,805 to Rs.10,97,225, so that the ratio of outgo to income was 41.28 per cent. against 39.82 per cent., and the net revenue shows an expansion of Rs.98,867 at Rs.15,60,576. These figures refer to the broad gauge system, and we find that the coaching traffic increased Rs.15,488 chiefly owing to passengers returning from the Delhi Durbar. Goods rose Rs.1,79,137, due largely to the import of food grains on account of the partial failure of the rice crop and the export of oil seeds. A serious accident occurred at the Singareni colliery resulting in decrease in the coal traffic of Rs.37,065. The effect will be felt even more severely in the current half year, revenue from this source being already Rs.1,50,397 lower. At 1s. 4 1-16d. per rupee the net earnings realised £104,445, and after deducting £5,952 payable to the Government of India on account of the Bezwada extension, the balance remaining is £98,492. Sum required to meet the guarantee of the Nizam's Government on the stock and debentures is £85,000, and the surplus of £13,492 is divisible in equal proportions between the Government and the company. Revenue of the metre gauge system, the Hyderabad Godavery line, was Rs.61,077 less than in the corresponding half of 1902 at Rs.13,28,747, and as expenses were reduced only Rs.15,349 to Rs.6,24,842, the net earnings are down Rs.45,728 to Rs.7,03,905, and the percentage of working expenses to total revenue was nearly 1 per cent. higher at 47.02 per cent. A heavy decline of Rs.74,262 occurred in the coaching traffic, entirely attributable to the prevalence of plague, but goods were up Rs.65,891 mainly from increased carriage of cotton and linseed. Net earnings of this system were also converted at 1s. 4 1-16d. per rupee, and realised £47,110, and as the sum required to meet debenture interest and sinking fund is £40,500, there is a surplus of £6,610 to be divided in equal proportions between the Government and the company. From the two systems therefore the company receives £10,051, and proposes to add it to reserve, making it £47,617.

Barsi Light Railway.

This undertaking had an unfortunate experience during the year to June 30 last. Barsi Town was visited by a severe outbreak of plague, which lasted for six months, from October, 1902, to March, 1903, completely dislocating all business, and naturally seriously affecting the company's traffic. Goods handled fell off 21,354 tons, meaning a shrinkage in revenue of Rs.54,691, while passengers and sundry receipts declined Rs.6,082, bringing the total decline to Rs.60,774 at Rs.1,07,905. All this decrease, however, was not due to the plague, the partial failure of the cotton crop being also responsible. Against the decline in revenue there was a saving of Rs.22,060 in expenditure, at Rs.76,666, so that the net revenue of Rs.31,239 shows a drop of Rs.38,713, the ratio of outlay to income being increased no less than 12.52 per cent. to 71.05 per cent. After deducting Indian income-tax, the net revenue is Rs.31,239, or £2,028 at 1s. 4d. per rupee, and to this is added £20 on account of adjustment of exchange, making £2,048. Interest on loan draws off £275, and £1,773 is left, a sum which does little more than provide the interim dividend of 2 per cent. The directors, however, pay a final dividend of a similar amount, making 4 per cent. in all, or 1 per cent. less, the money being found by reducing the amount carried forward from £1,614 to £388. Up to date traffic receipts show a slight improvement over the corresponding period of last year, and although there has been a slight recrudescence of the plague, the latest reports from the agents were to the effect that it had not assumed epidemic proportions, and latterly showed a considerable reduction in the number of deaths.

North Western of Uruguay Railway Company.

This company's gross revenue for the twelve months ended June 30 was £48,656, the largest yet earned, and £10,604 more than for the preceding year. The increase in traffic was spread over all branches, with the live stock business distinctly satisfactory, the number of cattle carried being 57,900, against 33,600 in 1901-2. It is anticipated that the improvement will continue. Expenses rose £7,299 to £40,395, accounted for by increased coal consumption and a larger amount spent on the permanent way, 508 tons of new steel rails and 12,690 hardwood sleepers having been put down against 365 tons of rails and 7,600 sleepers last year. This work must continue somewhat faster than hitherto, owing to the increasing weight and amount of traffic now carried. To the balance of net revenue £8,260, are added balance brought forward £478, interest on 4 per cent. bonds £10,723, and guarantee £13,997, making £33,459 in all. Interest on first and second debenture stock absorbs £25,676, and income tax £346, and after placing £1,000 to locomotive renewal account, and allowing £250 for depreciation of stores, the disposable sum is £6,188. The directors propose a dividend of 1 per cent. on the first preference stock from this, carrying forward £354, but all funds are required for the purposes of the undertaking, so this dividend must again be paid in second debenture stock.

Alabama Great Southern Railway Co., Limited.

All classes of traffic showed an increase during the year ended June 30, the passenger train earnings being $116,344 higher at $848,197, and the freight revenue $262,364 up at $2,749,818, but receipts from rents fell off by over $7,700, so that the gross income of $2,749,818 was $262,364 better. Working expenses, too, were substantially heavier at $2,064,802, or 75.09 per cent. of the receipts, compared with $1,774,210, or 71.33 per cent., owing chiefly to heavier wages and the higher price of fuel and materials, and the net earnings consequently showed a decrease of $28,228 at $685,016. Converted into sterling this yielded £140,950, or £5,808 less, and with income from investments and miscellaneous sources gave a total of £143,515, of which interest on bonds and debentures and other deductions absorbed £65,094. Adding in £130,215 brought forward, and £53 received as premiums on sales of Cincinnati, New Orleans, and Texas Pacific Railway preferred stock, there was a sum available of £208,690, and a dividend on the "A" preference shares of 10 per cent. was again paid, leaving £144,533 to be carried forward.

Salvador Railway.

This company did fairly well, as things go, in the year to June 30, the gross income, including subsidy of £24,000, having expanded by about £10,000 to £76,041. The report tells us that the increase is due to a larger haul of coffee, and marked improvement in local traffics. Working expenses were £33,694 against £29,921, the ratio to total income being .89 per cent. lower at 44.31 per cent. Net receipts were still insufficient to meet the service of both classes of debentures and all other outgoings, but the deficit was reduced from £5,904 to £893. Total debit is now £17,762. Every effort is being made to develop traffic from all possible sources, and in pursuance of this policy the share and debenture holders authorised the issue of the remaining £87,000 of prior lien debentures, with the object of providing funds, among other things for acquiring the warehousing and lighterage busi-

ness at Acajutla which was carried on with great profit by a local company. It was also thought advisable to have a substantial interest in the local pier company with the view to being able ultimately to issue through bills of lading to shippers and to perform the three services—railway, lighterage, and pier—under an inclusive charge. So 2,026 fully-paid shares out of 10,000 have been purchased, and upon them two quarterly dividends of 1½ per cent., or 3 per cent. in all, have been received, which at the price of acquisition works out at about 8 per cent. per annum. The warehousing and lighterage business has been extended and improved, and as the coming coffee crop is estimated to be equal in quantity to the last, satisfactory receipts are looked for. The company has maintained excellent relations with the Government.

Robinson Scuth African Banking Company.

This undertaking has been reorganised during the year to September 30 owing to the capital being in excess of requirements, and it has now a capital of £1,500,000 compared with £3,000,000. The deferred shares have been got rid of, and the ordinary are of £1 denomination instead of £4. Business for the past twelve months turned out very well, and the directors are able to report a net profit of £165,470, compared with £146,265 in the previous year, and £46,772 in 1900-1, so that the recovery from the war paralysis has been quite remarkable. Adding £27,933 brought forward, the total available is £193,403, and the directors first add £40,000 to capital reserve, being the estimated proportion of profits made between September 30, 1902, and December 11 of the same year, the latter the date of incorporation of the new company. Capital reserve now stands at £56,362. In April last an interim dividend of 1s. per share was paid, and it is now proposed to distribute another 6d., making 7½ per cent. in all, with £10,000 to general reserve, and £30,903 carried forward. A further substantial advance to £2,699,809 has taken place in the deposit, current, and other accounts, but the deposits with bankers and loans on securities at short notice are down more than £1,000,000 to £1,723,982. Investments are £483,480 lower, at £764,727, and these changes may be said to reflect the reduction of capital. Bills discounted and advances stand at £1,199,640, against £586,860, bills of exchange amount to £312,686, and cash in hand, with bankers, and at branches has risen over £100,000 to £329,393. In addition there is native gold in transit valued at £60,169, and the total of the balance-sheet is £4,551,151 against £5,242,768.

Bank of Montreal.

It was hardly to be expected that this bank would continue indefinitely to add to its profits in the fashion of the two half years of 1902, and for the six months to October 31 the net profits in spite of the larger capital employed were only £9,722 up at £188,457, compared with increases of £43,630 and £32,469 in the two previous periods. Including the very much larger balance of £148,933 brought in and £85,484 from premiums received on new stock, the amount available was £422,874, of which £205,479 was transferred to "rest" account, and £140,548 was absorbed by the payment of the customary dividend of 5 per cent., leaving £76,847 to be carried forward. This addition brings the "rest" or reserve account up to £2,054,795, against a capital of £2,871,280, compared with the corresponding period of last year. Notes in circulation show a small increase of £7,340, at £2,327,097, and deposits not bearing interest have risen by £405,824 to £4,845,065, but those bearing interest have fallen by £1,928,520 to £11,886,482. On the other hand gold and silver coin is less by £67,117 at £675,229, Government demand notes are slightly lower at £862,585, and amounts due by agencies or other banks and call and short loans in Great Britain and the United States are £2,629,828 down at £4,959,956, investments, notes, and cheques of other banks have been reduced by £307,880 to £1,812,620, and current loans and discounts are £1,762,925 up at £15,329,821.

Imperial Bank of Persia.

During the year ended September 20 this bank earned a gross profit of £97,125 at a total cost of £43,301, leaving a net revenue of £53,824. To this is added £3,451 brought in, making £57,275, of which £4,000 is due to the Persian Government, and income-tax absorbs £2,283. An interim dividend of 3s. per share has been already paid, and the directors now propose a final distribution of 4s. per share, making 7s. in all, with an immense advance to £15,991 in the sum carried forward. The balance-sheet aggregated £1,507,202 on September 20, and about half this sum was represented by capital £650,000, and reserve £100,000, the latter receiving no addition for the period under review. Notes in circulation amount to £346,808, and deposits, most of them in Persia, come to £225,439, while bills payable, endorsements, etc., stand at £148,963. On the credit side cash in hand at bankers and in transit totals £285,669, bullion £74,636, and money at call and short notice in London £373,192, these items aggregating £733,497. Investments, valued at market prices on September 20 last, reach £138,379, a sum of £3,489 has been loaned to the Persian Government, bills discounted, loans, advances, etc., amount to £490,607, and bills receivable to £118,658.

Wolverhampton and Dudley Breweries.

For a reason known only to themselves, the directors of this company increased the ordinary dividend to 12½ per cent. for the year to September 30, 1902, and as there was not the slightest justification for the step, it is but natural to find the return back again to the old rate of 10 per cent. for the twelve months recently expired. Net profits were almost precisely the same, being £39,058 against £39,027, and after providing all charges, together with mortgage, loan and debenture interest, the sum available is £104 less. Preference dividend takes £4,500, and the ordinary shareholders have already had an interim dividend at the rate of 8 per cent. per annum. They will now get a final 6 per cent., making 10 per cent. in all, and as the carry forward is reduced from £2,789 to £1,209, it is possible to add £12,000, or £4,000 more, to capital reserve. We congratulate the directors on this rather tardy display of common-sense, because their company's finances are not of the kind to admit of liberties. This capital reserve will now amount to £75,000, by no means too large a sum when it is considered that additions to properties proceed apace, and that the board's idea of adequate depreciation is something in the neighbourhood of 10s. per cent. per annum. The increase in properties in the year was £14,270, and as the company has no resources to meet such outlay, it is accomplished by borrowing, mortgages and loans being over £10,000 higher at £45,902. As usual trading accounts are adverse, and of assets totalling £494,787, about the odd hundreds consist of cash.

Bentley's Yorkshire Breweries, Limited.

Business during the year ended September 30 showed a distinct improvement compared with the previous twelve months, when the company suffered from the effects of a serious fire, and it was also moderately better than in 1901. Trading profits rose £12,311 to £97,514, and as rents receivable produced a trifle more at £26,751, the total income came £124,265, or £12,350 more. General charges on the other hand only increased by £2,009 to £37,571, and repairs, depreciation, etc., cost much about the same as a year ago at £16,418, while directors' fees, etc., and rents payable absorbed about £500 less so that net profits were £10,816 up at £54,760. Including the balance brought in the amount available was £56,697, or £10,583 more, and after meeting the preference dividend, the ordinary shares received 4 per cent. against 1½ per cent., and £4,000 was transferred to reserve, leaving £2,310 to be carried forward. Nothing was added to reserve a year ago, and the remarks of the directors would lead us to suppose that the same would have happened this time but for the loss of several of the company's licences at the last Brewster Sessions. The amount now added is claimed to be more than sufficient to meet such loss, but that statement we take leave to doubt, as even with it included, the total reserve only comes to £32,000 against a property account of £1,008,600, while debentures, debenture stock, and loans on properties continue to creep up, and now amount to £648,185. Trading balances continue in favour of the company, £37,811 being due to sundry creditors, and £93,148 owing by sundry debtors, and cash is £6,700 higher at £7,497.

Milwaukee and Chicago Breweries.

In May last the reorganisation of this company's capital was taken in hand, the amount being reduced by £679,500 to £852,500. The order of the Court having been given quite recently, it is somewhat inconvenient to hold the annual meeting at the usual date, and the directors propose to postpone the gathering for about a month. In the meantime they are pleased to inform shareholders that the sales in the year just passed have increased 58,944 barrels over the previous twelve months. This means that the £10 shares get a dividend of 5s. 6d., and the £1 shares of 6 6-10d. per share, representing the old preference and ordinary shares respectively.

New York Breweries.

This company's profits for the year ended August 31 were much the same as on the preceding twelve months, the total being some £500 less at £61,428. Repairs and renewals, £12,179, and depreciation, £4,375, were rather in excess of the previous year's allowances, and after meeting these charges, together with legal expenses and New York management fees, the net balance is £42,565, a drop of £1,785. Deducting debenture interest, London charges, etc., and adding £5,011 brought forward, the disposable sum is £22,285 against £28,411, and as the dividend on the unified stock will again be 3 per cent., the allocation to reserve is reduced £4,000 to £8,000, and the balance carried forward to £2,885. Reserve will now be £20,000 against goodwill and properties valued at £647,372, and the directors must go on building up the fund. In other directions the accounts seem fairly satisfactory, providing the big item of £117,489, representing customers' current accounts, loans, bills receivable, etc., is all serene, because floating debts are only £18,861, and cash amounts to £16,894.

Power Gas Corporation.

This undertaking did not do quite so well in the year to September 30 last as in the previous 13½ months, the profit being only £11,674, against £14,968. The decline seems a little strange in view of the language indulged in by the directors, the report announcing that new contracts of considerable value have been secured for the installation of power-gas plant both in this country and abroad, and also contracts for the extension of existing installations under the Corporation's patents. We are also told that satisfactory progress has been made with the contract for the gas generating and distributing plant for the South Staffordshire Mond Gas Company's first central station which, it is expected, will be completed during next year. All this is very nice, but unfortunately there is now a much bigger capital to be considered, a lot of money having been spent on the extension and remodelling of the works at Stockton-on-Tees, so that the ordinary share dividend is reduced 1 per cent. to 5 per cent., and the deferred holders get nothing against 4 per cent. A sum of £2,000 is written off preliminary expenses and the balance forward is raised from £1,408

to £1,694. It should again be noted that no allowance is made for depreciation of properties.

Pan de Azucar Nitrate Co., Limited.

Although this company was formed in 1901, its quota of production under the combination did not begin to run until April 1 of this year, and the iodine plant was started in the beginning of June. The production of nitrate actually commenced in January, but in the report for the twelve months ended June 30 the profits of £8,037 shown are for the last three months only. Including £5 from transfer fees, the amount available was £8,042, out of which London office expenses, debenture interest, and other charges were met, and £249 was transferred to the statutory reserve, leaving £4,733 to be carried forward. Capital expenditure to date comes to £75,278, but £1,250 has been written off for wear and tear of plant and machinery. Stocks and stores, including calcide and iodine in course of manufacture, are valued at £131,429, and with another £4,957 spent on tools, furniture, etc., the issued share and debenture capital is so fully employed that the company has been forced to rely very largely on credit. In addition to £36,139 due on bills payable, and to sundry creditors, there is an overdraft at the bankers of £10,487, against which £8,708, was owing by sundry debtors, £5,760 had been lent to the Nitrate Railways Company, and bills receivable came to £9,312. Cash in hand consisted of a trifle of £70 only. Preliminary and debenture issue expenses are carried at £7,242, so that there is a lot of dead weight to get rid of before the company can hope to show a clean balance-sheet.

Santa Elena Nitrate Co., Limited.

The favourable conditions produced by the nitrate combination have helped this company appreciably during the year ended June 30, but even so its record is not a cheerful one. Gross profits, including £34 from interest on deposit, transfer fees, etc., amounted to £3,685, and the directors by ignoring the question of depreciation, and by waiving two-thirds of their fees, contrive to show a net balance of £3,083. From this is deducted the debit of £102 brought in, and after paying two dividends of 1s. each, or 2 per cent. for the year, £824 was carried forward. The property is valued at £106,930, a very high figure for a company which cannot earn more than £3,700 a year, and there is no vestige of a reserve fund, unless the items of £440 for forfeited shares and £717 for exchange suspense account can be so regarded. In other respects, however, the company is fairly well off, as trading accounts about balance, while stocks of iodine in London are valued at £892, and cash amounts to £3,102.

Fourth City Mutual Benefit Building Society.

A further issue of 500 investing shares was offered by the directors of this society in April last, and 218 were taken up, producing £13,748, against which £9,458 was withdrawn, leaving a balance to the credit of this account of £221,535, compared with £216,857 a year ago. Deposits also increased by over £7,000 during the year ended September 30 to £64,905, raising the balance to £267,340. The management appears to exercise great care in the employment of the funds entrusted to it, and by lending £106,720 increased the total outstanding on mortgages to £502,839, of which £247,082 is in sums of less than £500, £85,077 in loans of between £500 and £1,000, and £134,746 in amounts between £1,000 and £3,000. Of the balance £3,446 is represented by the present value of three properties which have been in the society's possession upwards of twelve months, and on which the net income last year was £198, and £4,787 is on seven mortgages taken over within the twelve months. After transferring £1,000 to reserve, against £500 a year ago, the net profit was £13,662, compared with £12,677, and having paid 4 per cent. per annum for the six months to March 31, it is now proposed to pay interest at the rate of 5½ per cent. per annum for the second half-year, on all investing shares issued prior to January, 1901, and at the rate of 4 per cent. per annum on those issued since that date.

Allegemeine Elektricitats-Gesellschaft.

This great electrical undertaking, builder of machinery, and so forth, did well in its year ended June 30 last, and was able to distribute 8 per cent. upon a share capital of 60,000,000 marks, or say, £3,000,000, and after giving a bonus of 120,000 marks to the management, 240,000 marks to the staff, and the like sum to the pensions and maintenance funds, 224,385 marks were left to be carried forward. Its balance-sheet appears to be strong, for it has a reserve fund of 23,235,000 marks, which is not much short of the amount due by it on 4 and 4½ per cent. obligations, viz., 28,445,000 marks. One of the most interesting points about it is the disclosure it makes of the means frankly adopted by companies of this description in Germany to extend their hold upon their industry or outlets. This is done by investments in other companies, some of which are doubtless offshoots of the big undertaking. It has invested, for instance, 21,466,000 marks in the capital of eight other companies, besides 12,282,000 marks in the capital of the Bank for Electrical Undertakings or Electro Bank of Zurich. The total profits of the year came to 5,624,385 marks.

Cavendish Mortgage Company.

This small concern issues its second annual statement, the period covered being the year to August 31 last. During that time revenue from all sources was £6,332, compared with £7,610 in the previous fourteen months, so that income showed a slight decline. Interest and general charges differ but slightly, and after writing off £193 from preliminary expenses account, and providing £142 for sinking fund on short leaseholds, the net balance is £3,583. To it is added the sum of £1,005 brought forward, making £4,588, and the directors again propose a dividend of 5 per cent., with a small improvement to £1,316 in the amount carried to next account. At present the reserve fund stands at £426, and when opportunity offers the company's interests will be served if it is gradually increased. Balance-sheet items show very small movement. Issued capital remains at £65,440, and deposits at interest are rather more than £1,000 up at £25,926. On the assets side advances on mortgage have increased from £64,780 to £65,472, freehold properties held are a trifle up at £4,031, and leaseholds show an advance of £100 at £20,736. Sundry creditors are trifling, but debtors are less and cash comes to £2,709.

NEXT WEEK'S MEETINGS.

Monday, December 7.

Condensed Egg Syndicate.—Winchester House, noon.
Ivanhoe South Extended Gold Mining Estates.—Salisbury House, noon.
Robinson South African Banking.—1, Bank Buildings, noon.
Richard Hornsby.—Cannon Street Hotel, 3 p.m.
Willoughby's Consolidated.—Salisbury House, noon.

Tuesday, December 8.

Alabama Great Southern Railway.—Cannon Street Hotel, 1 p.m.
Bengal Nagpur Railway.—Gresham House, 12.30 p.m.
Dorman Long.—Middlesbrough-on-Tees, 12.30 p.m.
East Rand Mining and Estates.—Winchester House, noon.
Great Eastern London and Suburban Trams.—Winchester House, noon.
London and Western Australian Exploration.—Winchester House, noon.
Lea Bridge, Leyton and Walthamstow Trams.—Winchester House, 12.30 p.m.
Lanston Monotype Corporation.—Cannon Street Hotel, 2.30 p.m.
Mashonaland Consolidated.—Cannon Street Hotel, noon.

Wednesday, December 9.

Australasian Gold Mining.—6, Queen Street Place, 12.30 p.m.
Grand Junction Canal.—21, Surrey Street, W.C., 2 p.m.
Grand Junction Waterworks.—65, South Moolton Street.
General Ceylon Tea Estates.—Cannon Street Hotel, noon.
New York Breweries.—Winchester House, 12.30 p.m.
North Alabama Assets.—Threadneedle House, noon.
Otto's Kopje Diamond Mines.—Cannon Street Hotel, noon.
Stratton's Independence.—Cannon Street Hotel, 12.30 p.m.
Southern Punjab Railway.—70, Cornhill, 3 p.m.

Thursday, December 10.

Aron Electricity Meter.—Winchester House, 3 p.m.
Bentley's Yorkshire Breweries.—Woodlesford, near Leeds, 11.30 a.m.
Barsi Light Railways.—Winchester House, noon.
California Oil Fields.—Winchester House, 2 p.m.
Henderson's Transvaal Estates.—Cannon Street Hotel, noon.
Imperial Bank of Persia.—Cannon Street Hotel, noon.
Lomagunda Development.—Winchester House, noon.
London Scottish and American Trust.—Cannon Street Hotel, 11.30 a.m.
New Lydenburg Minera's Exploring.—Winchester ouse, 12.30 p.m.
Pahang Corporation.—Winchester House, 12.30 p.m.
Tolima Mining.—Salisbury House, noon.
Wolverhampton and Dudley Breweries.—Wolverhampton, noon.

Friday, December 11.

Lyceum Theatre.—Winchester House, 11.30 a.m.
Lloyd Copper.—Winchester House, noon.
Menzies United Gold Mines.—Winchester House, noon.
Peninsular and Oriental Steam Navigation.—122, Leadenhall Street, 1 p.m.
Santa Fe Land—River Plate House, 11 a.m.
Sweetmeat Automatic Delivery.—Winchester House, noon.

The Newnes Magazines.—A voluminous mass of reading matter is to be found in the Christmas numbers of the Newnes magazines, *Strand*, *Sunday Strand*, *Wide World*, and *Captain*, the first-named being the most bulky. Helène Vacaresco's sketch of her meeting with the German Emperor is pleasant reading, and will be specially appreciated by that large section of the public which is always curious as to the private life of royalties. Besides a number of short articles by well-known authors, there is an illustrated article, "The English House of the Future," in which some distinguished architects give utterance to their views on the future of English architecture. Rudolph de Cordova contributes a good paper on "Father Christmas." Readers with philanthropic leanings will enjoy "Derelicts" (*Sunday Strand*), an account of the work at Medland Hall, and W. Granville Greenwood's "Century of Sunday School Work." This number concludes Mrs. L. T. Meade's story, "Roland Trevor's Secret." Mr. E. Leslie Williams writes in the *Wide World* of "The First Wireless Newspaper," an interesting account with photographic illustrations of the first newspaper which receives its news by wireless telegraphy. The *Captain* has all its usual attractions, and is really a capital boys' paper. "Poor Dear Harry," by Guy N. Pocock, is delightfully amusing.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Oct. 23, $11,398; increase, $916. Aggregate from January 1, $513,376; increase, $20,006.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Oct. 31, Rs. 44,701; increase, Rs. 7,528. Aggregate from July 1, Rs. 6,21,269; increase, Rs. 49,924.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Oct. 31 Rs. 11,585; increase, Rs. 5,575. Aggregate from July 1, Rs. 1,56,175; increase, Rs. 41,739.

Bengal Central Railway.—Traffic receipts for week ending Nov. 7, Rs. 45,659; increase, Rs. 20,933. Aggregate from July 1, Rs. 648,126; increase, Rs. 128,226.

Canadian Northern Railway.—Traffic receipts for week ended November 21, $84,600; increase, $25,200. Total, from July 1, $1,359,100; increase, $506,500.

Lucknow Bareilly Railway.—Traffic receipts for week ended Oct. 31, Rs. 19,589; increase, Rs. 746. Aggregate from July 1, Rs. 3,58,712; decrease, Rs. 19,804.

Quebec Central Railway.—Traffic receipts for the 3rd week of November, $10,446; decrease, $3,167. Aggregate from January 1, $620,136; increase, $12,292.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Oct. 31, Rs. 19,971; increase, Rs. 3,271. Aggregate from July 1, Rs. 1,88,442; increase, Rs. 3,932.

Salvador Railway.—Traffic receipts for week ended Nov. 28, $19,250; increase, $8,000.

Sun Insurance.—Interim dividend of 4s. 6d. per share.

The Mint, Birmingham.—Interim dividend at the rate of 5 per cent. per annum on ordinary shares for six months ended Sept. 30.

Western Telegraph.—Interim dividend, payable on Dec. 21, of 3s. per share, or at the rate of 6 per cent. per annum, for quarter ended Sept. 30.

COMPANY MEETING.

BOWDEN BRAKE.

The third annual general meeting of the Bowden Brake Co., Limited, was held on Monday, November 30, at Holborn Viaduct Hotel, under the presidency of Mr. James R. Nisbet.

The Secretary having read the notice convening the meeting and the report of the auditor,

The Chairman said: I think I may rise once more and speak to you in terms of congratulation upon the success which has attended the efforts of your directors in the past year. You will observe from the balance-sheet that the profits of the business have been well maintained; in fact, they slightly exceed those of last year. But while these have been good, yet I have no hesitation in saying that they should have been better, and for this reason—everyone who has lived in England at least this year will agree with me that the weather has been of the worst possible description, and that no class of traders are likely to suffer more than cycle dealers in respect of unpropitious weather. I do not put that forward as any particular excuse, but I do say that we might have reasonably hoped for better things if the weather had been better. On that point some may say, "But look at the other large cycle concerns; they have done well despite the bad weather." So they have, but not quite despite the bad weather, for those who have an intimate knowledge of their affairs and of the affairs of the cycling world generally know that their increasing prosperity is more to be accounted for by the fact that the economies of production are beginning to assert themselves and the greater volume of trade is flowing to the larger companies; the smaller men are gradually disappearing. Besides this, the export trade has largely increased with our English companies, and, taken altogether, none of these companies can put their finger on the weather as we may do and say that it accounts for any depreciation in their returns. They have had the good set-off of greater trade from the disappearance of smaller competitors and from the increase of export business, chiefly to the colonies. But while they enjoy these particular privileges, we do not; we are more dependent upon home trade, for this is an English company, pure and simple, although we have a little colonial business. We are more dependent upon the general state of things rather than the conditions of trade. Now, if you come to the net result, you will see that we tell you in our report that, "With a view to further establishing the company's products in public favour and extending the scope of business, the directors, during the season under review, largely increased the expenditure on advertising and augmented the number of their representatives." We think that has been a very wise policy, and we think it is a policy that must be pursued in future. We have put out an article which is pre-eminently suited for the purpose for which it is intended. We have also taken care to associate with that article our name, and we are taking greater care now to make that name, as it were, a household word wherever cyclists go. We are pushing the name "Bowden" for all we are worth, and this year, as we have indicated, we not only advertised ourselves in the technical Press, but also largely in general newspapers, weekly periodicals and monthly magazines. What is the result? The public continue their demand. They have, to begin with, a good article; they have along with it a good name, and they ask for it everywhere. For a long time the public demanded our goods of the trade and the trade had to supply them. Our brake became such a specific article of public demand that it paid some gentlemen who look for small profits and quick returns to use us as a means of advertisement by cutting prices. This year we took the bull by the horns and we have produced what is now known as the Bowden Brake Company's price maintenance scheme—a scheme of very far-reaching import to the whole trade—and the result is that the factoring trade, who are our more immediate customers, and the retail trade who are our secondary customers, are now united in supporting us. We have the public in our favour and the trade is supporting us, and with these two important factors which bear upon the question of good results I think we need have no fear of the future. If you turn to the balance-sheet on the asset side you will find cash and bills amounting to £25,000 odd. For the sake of any one who has any doubt on the subject I may mention that the bills amount to only a few hundred pounds. Licenses, patents and goodwill, which stood at £22,000 when the company was formed, are reduced on this sheet to £15,000, but they will be further reduced by the proposals we make to you to-day to £12,500. We have cut down that asset to that extent after two years and nine months' trading, and if we write it off at the rate of £2,500 a year it will be totally extinguished in five years. The total amount placed to reserve, with the addition of the £8,000 which we now propose, amounts to £20,000, and, although during the two years and nine months of our existence we have distributed 99½ per cent. in profits to you, we shall still have liquid assets, after distributing what we propose to do to-day, amounting to £51,748, as against your capital of £40,061. That is a very good and very satisfactory advance. Last year you had only £41,000 left in tangible or liquid assets after making the distribution; but this year, although we maintain our distribution and write off £1,500 for loss on investments, through the depreciation which has taken place in Consols, we have increased your liquid assets by over £10,000. You will observe that in the auditors' report he makes a proviso; he agrees with everything, "subject to provision being made for depreciation of investments. We have adopted his suggestion, and depreciated the investments by £1,500. With these observations I beg to move the adoption of the report and accounts.

Mr. E. M. Bowden seconded the motion.

The motion was then put and carried unanimously.

Mr. John E. Young, the retiring director, having been re-elected, and Mr. Allvey re-appointed auditor, a vote of thanks to the Chairman and directors concluded the proceedings.

The Investors' Review.

Union Pacific Railroad Company.

The sixth annual report of this company, in its reorganised shape, for the year ended June 30 last, states that there was an increase of $3,575,000, or 7·53 per cent., in the gross earnings, bringing the total up to $51,075,000. Working expenses, however, went up $3,150,000, or 13 per cent., and taxes also increased $37,571, so that the actual increase in net income was barely $387,000. Said net income, however, was $22,328,000, and adding in interest on Oregon Short Line and Oregon Railroad and Navigation Companies bonds held and dividends on Northern Securities stock owned, and on the stocks of the Oregon Short Line and Oregon Railroad Navigation Company also owned, together with rentals, etc., the entire disposable balance was $26,976,000, or $454,000 more than last year. From this fixed charges took away $11,676,000, a decrease of $313,000, leaving $15,300,000 for other purposes. Out of this balance, $8,333,000 was devoted to meet the 4 per cent. dividends paid on both the company's own preferred and common stocks, and to paying 4 per cent. on the small fragment of Oregon Railroad and Navigation preferred stock held by the public. Deducting that amount $6,943,000 was left to carry forward, an increase of $628,000 on the preceding year. This is surely a magnificent result, for the free balance thus brought out would have been sufficient to give fully another 6 per cent. to the common stockholders of the company, and still leave something over. No wonder, then, that the American press devoted to railroad interests, and especially the New York *Chronicle* draws attention to the remarkable contrast between the prosperity exhibited in the company's balance-sheet and the weakness of its stocks.

Is there no key to this apparently contradictory state of affairs? Can the company be really as prosperous as it seems? It may be, but there is nothing in the accounts to enable a definite opinion to be given on the point, although a good deal may be found there calculated to explain why its preferred and common stocks should be so weak. During the past year, for instance, it added £943,000 to its stock issues, making the total, common and preferred together, upwards of £42,000,000, and in the same time the bonded debt was increased by £6,200,000, so that the total capitalisation of the company in stock and bonds is now upwards of £108,000,000, a quite formidable figure, and with an indefinite future increase looming ahead. It is the rapid increase in share capital and debt that accounts for the weakness in the company's lower securities. Out of last year's income $2,000,000 was spent on betterments, etc., but that was a mere drop in the ocean, for the company is not only spending freely out of capital on its own line, but undertaking heavy obligations on behalf of the Southern Pacific Company, to which concern it has advanced $15,396,000, money repayable on demand, and mostly borrowed by the Union Pacific Company at its own risk. It has also entered into large financial transactions in connection with the Oregon lines and the Northern Pacific Company. One operation, for instance, was the exchange of $82,491,000 of Oregon Short Line 4 per cent. participating twenty-five year gold bonds, to pay for an equivalent amount of Northern Securities capital stock acquired by it. These bonds were sold to the Union Pacific Railroad Company at 90 per cent. of their face value, for the purpose of retiring the entire issue of Oregon Short Line Northern Pacific purchase money certificates, amounting to $61,000,000, and in discharge of other indebtedness of the Oregon Short Line Company. On this transaction the "discount" was $8,249,000, and that has been written off profit and loss. No less than $31,000,000 of these participating bonds of the Short Line Company were sold by the Union Pacific to its shareholders as a first start, and then another $5,000,000, but it still has $46,491,000 in its Treasury, to be marketed, no doubt, one of these days. All this may be excellent business in the future, but it implies a constant demand for fresh money, and also the continued pushing back of the preferred and common stock by increased bonded indebtedness. That indebtedness, for instance, now amounts to nearly £57,000,000, or $284,226,000 gross, sundry offsets of credit, in the shape of bonds purchased, bringing the figure down to about £56,000,000. The Union Pacific Company sold $10,000,000 face value of its 5 per cent. collateral notes during the year—these mature on February 1, 1905—lending most of the money to the Southern Pacific Company. With all this, progress in earnings is unquestionably remarkable, and ought to guarantee moderate dividends on the lower stocks for many years to come. Going back to the year ended June 30, 1898, we find the gross income larger by $18,443,000, while the expenses and taxes have gone up only $9,167,000. During the last five years, however, about £10,000,000 has been spent out of capital in improving the property of the Union Pacific road proper, and its dependent Oregon Short Line and Railroad and Navigation Companies. Similar capital expenditure will have to continue at a great pace for many years, and therefore both the preferred and common stocks of the Union Pacific must for long remain in the category of speculative securities. The company, however, still has a valuable asset in its

lands, and some portion of its bonded debt will be annually redeemed by the proceeds of land sales. Perhaps we should again point out that the mileage is practically all single line, much of it still very far from being in first-class condition. The total length of road possessed by the three companies embraced in the Union Pacific system was 6,105 miles on June 30 last, an increase of 175 miles in the twelve months, and of this barely 79 miles was doubled tracked. To be sure, there were 1,505 miles of sidings, but these would not help much were a real doubling of the line to be undertaken.

Our Foreign Trade in November.

The figures for the past month do not look so good on the surface as they have done for some time back, especially so far as the exports go. Imports amounted to £48,724,000, an increase of £3,606,000, or nearly 8 per cent., upon the total for November, 1902. Exports, on the other hand at £23,038,000 show a decrease of £1,610,000, or about 6½ per cent. Re-exports of foreign and colonial merchandise have also fallen off by £525,000, or nearly 10 per cent., to a total of £4,805,000. These figures have given a grand opportunity to the anti-British, yellow Press to raise another hypocritical howl about the enormous excess of our imports. They talk for all the world as if we borrowed the money abroad in order to pay for these imports, and as if the same phenomena had not, to our immense profit, been visible for the last two generations in greater or less magnitude. As a matter of fact, there is nothing to be specially alarmed at in last month's figures, but we shall postpone any detailed examination of the account until the whole year can be dealt with. Totals of both imports and exports up to date, as our summary tables show, have been indicative of remarkable prosperity, a prosperity in which we should rejoice to the full, were it not that some portion of it is undoubtedly forced, the product of war expenditure, steady borrowing by customers, and post-war extravagance. Speaking of this last, the figures for the past month remind us that our exports to South Africa are now showing striking symptoms of decline. As has frequently been pointed out in these columns, there was a tremendous volume of goods despatched to that quarter of the world when the war ended, in the belief that unbounded prosperity was immediately to ensue. Unbounded misery really hangs over that miserable region, and now that Cape and Natal loans and British Government guaranteed borrowings for the Transvaal have been about exhausted, we must expect to see a great decline in the demands from South Africa for every description of British manufactures. To no small extent the trade with our Australian colonies has been governed by the same malign influence, and in proportion as these settlements are unable to find a market created by borrowed money in South Africa, or

† Not included under following heads

themselves to raise loans in London, it is to be expected that, for some years at least, our exports thither will show contraction. Even Canada may trade less extravagantly should its big railway companies be compelled to slacken their outlay of capital raised in this country. Canada, however, is a strong and expansive country at present, and we do not look for any dangerous shrinkage in that quarter.

For the eleven months, it will be seen that our exports of merchandise fall short of our imports to the amount of £161,240,000. This is a great figure, and represents, in the main, the product of the most profitable foreign commerce the world has ever seen. Great, however, though it be, it is less by £4,624,000 than the excess of 1902, and by over £3,600,000 than the total for 1901. Even on this ground, therefore, the imaginary decadence bewailed by the irresponsible mob who seek the ruin of England, shows diminution, without help from retaliation, preferential tariffs, or anything of that hate-engendering kind. And when we look into last month's details, it is found that no inconsiderable part in the increase in imports is in food stuffs, an inevitable consequence of the disastrous harvest year recently concluded. Wheat and wheat flour, oats and Indian corn all came to hand last month in quantities much heavier than for the same month last year, and the price of wheat has risen, though that of other cereals has remained advantageous. Price, indeed, enters considerably into the less superficially favourable composition of the bill in all direction, and helps to swell it out. We have paid more not only for wheat, but for preserved meat, nitrate of soda, raw

	Eleven Months ended November 30.			Inc. (+) or Dec. (–) as compared with 1902.
	1901.	1902.	1903.	
	£	£	£	£
Imports	505,838,431	508,394,409	525,027,734	+ 16,633,325
Exports	341,076,571	342,524,427	363,787,285	+ 21,262,858
Excess value of imports over exports	164,761,860	165,869,982	161,240,449	+ 4,629,533

and refined sugar, tea and wood, at the same time that export prices have not always risen in the same proportion. Our export trade, furthermore, has been dislocated not merely by the diminished requirements of South Africa, largely of the speculative kind all through, but by the distressing effect of gambling in raw cotton, a form of injury to trade from which no amount of protection would save us. It is, however, cheering to see that some of our foreign customers, against whom the wrath of the Birmingham war besotted clique and De Beers manipulators of British politics is directed, continue to support us in a manner that helps to obliterate the bad effects of over trading with parts of the empire. In the matter of

textile machinery, for instance, European countries took about £26,000 more last month than in November, 1902, thus compensating in part for the decline in the United States and South African demand. South America, too, all of which would be badly hit by us under a protective system, has increased its orders. We exported rather more new shipping also last month, all of it to foreign countries, and Europe maintains its demand for woollen and worsted tissues with fair regularity, as well as for linen goods, although in this last class of article France and Germany did less in the month just closed than in November a year ago. The whole of the one month's changes, however, are mere accidents, which might be produced by delays in the arrival of ships. May we note with apprehension the steady and remarkable increase in the supply of reels of paper manufactured abroad? The total for the past month was 123,614 cwt., against 80,824 cwt. in November, 1902, and the increase came chiefly from Spain and the United States. Can it be true that our yellow Press is supplying cheap corruption to the public mind by means of this imported paper?

Economic and Financial Notes and Correspondence

President Roosevelt's Message to Congress.

It is to be hoped that Mr. Roosevelt's latest message to Congress is a purely spontaneous and personal effort on his and the Federal Government's part. If it is not, but has been drawn up to suit the present temper of the nation, then the principles governing the political life of the United States, particularly in foreign affairs are deteriorating more rapidly than we in Europe thought. For the whole tone of the message, where it deals with questions other than those strictly domestic, is one of blatant jingo imperialism of the type so assiduously cultivated in recent years by our ex-Colonial Secretary. Starting with Panama, the President strenuously denies the charges of American complicity in the recent revolution, which he declares was the natural outcome of Colombia's misrule and incapacity. But would Panama have revolted had the States not coveted the Isthmus for their ditch? Mr. Roosevelt assures Congress that it would, the Colombian Government's refusal to sanction the Canal treaty being only the last straw. Really, he asks the world to believe too much. For in his next breath he proceeds to show the great advantages that will accrue to the States from the revolution, and on this ground tries to justify the indecent haste with which he and his Government have recognised the new state.

Of the Alaskan award and the Venezuelan arbitration, President Roosevelt naturally speaks well, but when he goes on to deal with the navy another blast of imperialism is let out. He begins with a quotation from President Munroe's message in 1824, when Congress was told that "the navy is the arm from which our Government will derive most aid in support of its rights." Mr. Roosevelt then congratulates Congress upon its praiseworthy desire to build up a strong navy, but points out that this great work must not be "let up," for to stand still means to go back. More money, therefore, must be wasted on ships, and a naval base created in the Philippines—it has already been selected—for not only is such necessary in time of peace, but in war would be indispensable, and its lack ruin. The army, too, must be strengthened and drilled to a higher state of efficiency, and for this manœuvring grounds should be purchased in various parts of the country, so Congress is asked to vote further credits. Really the State might be one of those effete and worn out European nations they have always affected to despise. What need have the Americans to run in the mad race for huge armaments and standing armies that has crippled and nearly ruined all the great Powers of Europe? If these are the real sentiments of the nation, then, indeed, is it degenerate. In bygone days the foreign policy of the States was no interference by foreign states in North America, but non-intervention in the affairs of nations outside, while over-sea expansion was a thing abhorred. Now the madness for land and empire, that madness which is sucking out the strength of the Old World, appears to have also seized the greatest nation in the New.

In home affairs, the most important parts of the message are those dealing with trusts and capital and labour. The former are to be supervised by a new department, that of Commerce and Labour, which, with its attendant bureau, is to act the part of watch-dog over the doings of the great corporations and trade unions. But we imagine both will find a way of evading its vigilance. In addition to this supervision, the department has a lot of other duties thrust upon it, such as strengthening domestic and foreign markets, perfecting transportation, building up the mercantile marine, keeping out undesirable immigrants, and generally bringing together on common grounds those necessary partners in industrial progress—capital and labour. How all these duties are to be performed, Mr. Roosevelt does not tell Congress, so it is to be supposed that it will have to legislate as best it can after a commission or two has reported upon the different heads. Still the great pow-wow is there, which is the main thing, with a presidential campaign so near. The corporations, lest the new department should scare them, are told that if they are honest they need fear nothing, as its energies are to be directed only against those wicked combinations whose managers refuse to recognise their obligation to deal squarely with their shareholders, their competitors, and the public. But we thought such did not exist in the States. In domestic, as in foreign affairs, the message is disappointing, only an election address ought never to be too closely scrutinised. We, at least, cannot throw stones.

United States Finance.

A few significant facts emerge from the mass of words composing the report of Mr. Shaw, Secretary of the United States Treasury, to Congress. The first of these is the fine round total of the federal revenue. In the fiscal year ended June 30 last, this amounted to $694,621,000, an increase of $10,295,000 on the preceding year. Expenditure, however, at $640,323,000, went up $47,285,000, yet there was a surplus of $54,298,000, or nearly £11,000,000 on the year, and this fine result evidently encourages the administration to further deeds of extravagance. In the current year the revenue is estimated at $674,768,000, and the surplus is reduced to $14,000,000, or less than £3,000,000, by the enlarged outgoings. But even that does not satisfy the ravening demands of republican militarism, for it is estimated for the fiscal year 1905 that on an anticipated revenue of $704,472,000 there will be a deficit of $23,002,000, owing to the further growth of the expenditure, which is taken for that year at $727,474,000. The figures are altogether prodigious, and totally without warrant in any necessities of the country. Such a rapid increase in the devouring rapacity of the Treasury merely indicates that the resources of the people are being consumed by republican corruption and by the spirit of imperialism fostered so recklessly by Mr. Roosevelt and his supporters. A great pacific republic—at least presumably pacific—is spending nearly as much money as the British Government, and behind its outgoings are the budgets of all the States composing the Union. It may be long before a revolt against this conscienceless waste breaks out, but when it does come it will go perilously near shattering the federation in pieces.

Meantime, however, all is wealth, and the Treasury is able to boast of the steady increase in its gold reserve, which since 1890 has more than doubled until, on June 30 last, it stood at $388,686,000. Gold continues to accumulate, so that on October 1 the total in hand under all heads amounted to $654,812,000, but a large part of this is represented by gold and silver certificates in circulation as paper money. Mr. Shaw has a great deal to say that is sweet about the monetary system, but into that we cannot now enter. Only one fact need be mentioned. He boasts that the silver stored in the vaults of the Treasury amounts at present to "nearly 500 car loads of 30 tons each, and that it would cost $100,000 to recount it, but it is added that this mass of bullion is worth less than half its coinage value, and yet it is all redeemable at a gold valuation by the Government. A rough calculation puts the loss on this asset alone at quite £20,000,000, and

nothing more need be said to indicate how far from perfect the currency system is. Trade, it may be added, was splendid last year, and for the first time in the country's history the imports "passed the billion dollar line." They amounted to 1,026 million dollars, while the exports came to 1,420 million dollars. Exports thus exceeded imports in value by nearly £79,000,000, and we expect to hear cries of alarm arising from all parts of the country at this dangerous shrinkage in the margin between the two sides of the account. Perhaps, though, the American people are filled with ecstatic delight at the effect of the transfer of so much British shipping to the American flag. Actually last year the percentage of exports and imports carried by American vessels increased by 9.1 per cent. over the previous figure. How much is lost on the flag business Mr. Shaw does not say.

The Distressed Ebbw Vale Company.

When we see the chairman or other potentate of a joint-stock company joining in the howls of the Chamberlainites, and wailing for protection to save a business from ruin at the hands of that wicked foreigner out of whom we have made so many thousands of millions, we take a look at the history and figures of that company. Mr. Joseph Brailsford, the chairman of the Ebbw Vale Company, must therefore thank himself if we have one or two unpleasant questions to ask him with regard to his last two balance-sheets. The memory of the man in the street is as short as Mr. Balfour's or Mr. Chamberlain's, and the past history of the Ebbw Vale is probably as unfamiliar to the multitudes who have read Mr. Brailsford's wails as the domestic history of Persia. So it may be expedient to remind people that this Ebbw Vale Company has been about forty years in existence, and, with brief exceptions, during the whole of that time it has been more or less of a derelict. It had plenty of assets and plenty of business, of a sort, on the average, but it was capitalised to a grossly dishonest excess at the start, and, in spite of borrowings, re-shapings, writings down and other expedients, cruel enough to the shareholder, it has never really become a solid and prosperous company, never could become that. It is not reliably prosperous now, in spite of the glowing exhibit of the balance-sheet for the year ended March 31 last, and the eloquent recital of its wonderful prosperity by Mr. Brailsford at the annual shareholders' meeting. No doubt a profit of £124,048 was brought out, and compared most brilliantly with one of £6,245 in the preceding year, but much of it appears to have been of the usual transitory description, and the balance-sheet, anyway, is a thoroughly bad one. It foots up to £2,379,526, and we should say the entire property is not really worth one-half of that sum. Cost of property, in land, buildings, works, plant, etc., is continually added to, £32,965 having been expended out of capital account during the year under review. This brought the total property account up to £1,928,017, and we are persuaded it would be overvalued if the £1,000,000 were knocked off. No wonder, then, that the company is perpetually tumbling back into the slough of misery, and that dividends on the shares are few and far between.

Waterlogged and paper-smothered, however, though it be, no genuine effort has been made to bring real values and capital account into accord. The amount written off for depreciation in the last two years has only been £44,057, while capital outlay on properties alone has in the same period been written up nearly £60,000. That cannot be prudent finance, and the accounts in other respects are very far from clear or restful to the mind. What, for instance, has become of the capital sunk in the West Somerset Mineral Railway? That derelict concern—for we believe it has now ceased to run any trains—cost the company in the past year £6,317, and in the previous year £6,288 for annuity charges. How much capital was sunk upon the line, and does it still figure in full in the capital account? Has one shilling ever been cancelled out of profits, or by any means? There is an improvement in the past year in the floating indebtedness of the company, which has fallen from £186,686 to £110,192. Sundry debtors are also down from £173,337 to £159,049, but the stock of rails in hand has increased upward of £7,000, and stocks in hand were, on March 31 last, £170,551, against £163,119 the year before. Cash and bills in hand both years were under £1,000, and cash at bankers at the close of the past fiscal year was only £2,826, in spite of a "profit" of £124,000. At best, however, the show is mean. How can a company thus overloaded by capital, thus neglecting to write down the value of its rapidly diminishing assets hope to maintain competition against the better equipped foreigner? What amount of royalties does the company have to pay on its minerals, and why are these wrapped up in working expenses so as not to be revealed to anybody? "The royalties on minerals from freeholds and copyholds," says a note in the profit and loss account, "are charged against cost of production, and taken credit for as an earning from the property." Is that straightforward? Why cannot these figures be set forth so that the shareholders may know what the handicap against the company is in this direction? Are the stocks in hand really worth the amount set forth in the balance-sheet? There is no independent valuation, and the auditors, Messrs. Alfred Tongue and Co., are careful to state that the total is taken into the balance-sheet as certified by the Works Committee of the board below cost. We may have a few more questions to ask when Mr. Brailsford has adequately dealt with these, and, meanwhile, we think he should first put his own house in order, before imitating the man of Birmingham in cursing the "foreigner." What a pitifully mean and cowardly spirit that "line" betrays.

Elysee Palace Hotel.

The directors of this imposing-looking Parisian hotel have suddenly become wonderfully solicitous for the welfare of the ordinary shareholders, and the incident seems a little strange. As is well known, the capital of the company consists in part of 3,000 deferred shares of £1 each, entitled to certain special rights and privileges, including half the profits of each year, after paying 6 per cent. per annum on the ordinary shares, and a moiety of the surplus assets in a winding up, when the ordinary shares have been repaid. Now the directors say that the existence of these deferred shares is inimical to the interests of the ordinary shareholders, and for some time past they have been considering the possibility of securing their extinction, which seems kind. Terms have been provisionally arranged for the cancellation of the deferred shares, by substituting for them 36,000 ordinary shares, and a Bill is about to be introduced into Parliament for confirming the arrangement. Maybe everything is as the directors tell us, but philanthropy is so rare nowadays in the company business that one desires to examine a little closely into deals of this sort. The first thing observed is that owing to an increase in the ordinary share capital during the year, and the necessity of commencing a debenture stock redemption fund with £625, the ordinary dividend is reduced ½ per cent., to 6½ per cent., meaning that the deferred holders receive only £1,250, against £2,192 in the preceding year. Not only so, but a new item appears in the accounts, being the cost of underwriting £250,000 debenture stock and other expenses connected with it, this debt having been created during the year to replace mortgage loans bearing various rates of interest. Total cost of carrying out the issue came to the tidy sum of £26,702, and clearly an asset of such character cannot appear in the balance-sheet indefinitely. Therefore, it must be written off, and £2,000 is the minimum sum that should be annually set aside until the item is completely extinguished. Evidently the directors recognise this, but profits show no signs of rapid expansion, and it seems beyond doubt that yearly appropriations for debenture redemption and debenture issue expenses reduction, together with the increase in ordinary capital to its full amount must still further curtail the dividend on the ordinary shares. Should it fall to 6 per cent., or below, the deferred shares as existing will receive nothing, whereas if they are converted into ordinary on the suggested very generous terms, a return of some sort is permanently assured, or, at least, so long as ordinary dividends can be paid. Even a 4 per cent. distribution would give them more than the amount received for the period under

review, and the return may one of these days find that level, because the question of reserves cannot be for ever ignored. Freehold site, building, etc., are valued in the balance-sheet at £606,495, and as the issued share and debenture capital considerably exceeds that sum, it is only with a smile that the directors' reference to the deferred shareholders being entitled to half the surplus assets, after repayment of the ordinary capital, can be contemplated. We should not care to bid much for the surplus, and it is clear as day that the deferred holders are sacrificing nothing in that direction. Depend upon it we should have heard nothing of this conversion had the ordinary dividend been on the up grade instead of the down, because as things are the deferred holders have everything to gain, while their chance of loss is not worth considering. Before passing to the result of operations, it may be observed that the undertaking is in a very poverty-stricken condition. creditors being £22,136 against debtors £4,039, and although there is cash £25,328, most of it will be swallowed up in dividend and interest payments. Trading profits are returned at £40,357, or £1,214 more than for the previous year, in each case after allowing £11,928 for maintenance and upkeep. Interest was slightly higher at £19,153, and as increases occurred under general charges, salaries, and directors' and trustees' remuneration the net balance is only £623 up, at £18,152. A year ago 7 per cent. was paid on the ordinary shares, but owing to the increase in capital the return is now only 6½ per cent., giving the deferred shares £1,250 against £2,192. A sum of £625 having been set aside to debenture redemption fund, the balance carried forward is raised from £6,798 to £6,825.

Chinese Labour for Rhodesia.

They seem determined to have it, as we said a fortnight ago, and the controllers of the mining industry will never rest content until they see an army of Celestials pouring into the country. Thus are the insane lured to their destruction. A week ago a public meeting was held in Salisbury at which resolutions were passed asking the Government to take steps for the introduction of Chinese, and on the self-same day Dr. Sauer was orating on the subject at the meeting of the Consolidated African Copper Trust. So the rumblings of the agitation have commenced and they will certainly swell until they become as deafening as the clamours of the Rand mine bosses themselves. The percentage of local natives working on the mines in Rhodesia, said the magniloquent doctor, is so ludicrously small that it is almost useless taking account of the number. Those they had secured and with whom they had made shift had come mostly either from Portuguese territory or from across the Zambesi. Since the resumption of active mining in the Transvaal the supply from the former place had steadily diminished, as the higher wages and other attractions of the Transvaal mines, together with the prohibition of the Portuguese Government as far as Rhodesia was concerned, had seriously curtailed the already too short supply of labour in the country. In fact, the deficiency had reached such a point that some of the principal mines had had to suspend milling operations. After having made efforts in every possible direction, everybody connected with Rhodesia had been driven to the conclusion that the introduction of Asiatic labour was the only solution of the difficulty. The cry that Africa should be made a white man's country was, on the face of it, nonsense, as it was impossible to make it such, having regard to the eighty million blacks in Africa and less than two million whites. Such are the specious arguments which these men advance to support their pleas, relying on the stupidity of the English people to prevent detection of the mocking insincerity. "The white man would only retain his predominant position in the future by remaining the predominant and governing caste and not by levelling himself down to the aborigines of the country." What noble sentiments! And what particular white man does Dr. Sauer mean? The mine boss? For all the others are to become beggars or starve. They're to have no governing power of any sort if the mine potentates can have their way. Rhodesia in no sense requires Chinese labour, could not use the coolies if it got them. The clamour up there is therefore an impudent fraud, hollow and dishonourable, indulged in at the bidding of the De Beers swarm so as to facilitate the introduction of Chinese on the Rand. That object gained, another war will follow, in which Africans of all hues may unite against the capitalists.

New Zealand Loan and Mercantile Agency Company.

This is one of the many Colonial loan and agency companies that serve little useful purpose by remaining alive, but must go on existing through sheer inability to perform the happy despatch. All kinds of expedients have been resorted to in an effort to keep the New Zealand Loan Company on its legs, but the wonderful capital juggles indulged in by successive boards of directors as a means to ultimate salvation have only served to make a confused position worse confounded. As for the losses they have entailed on the trusting public they are now past reckoning. During the past year the directors have been engaged in the task of undoing a certain brilliant financial operation perpetrated in 1897. No one will thank us for raking up a dark history, and we shall refrain, but it is necessary to recall that when in 1897 the company was undergoing one of its violent and disaster-laden reconstructions, some of its stocks were so drastically dealt with that afterwards they either had no existence at all or the value they were supposed to represent escaped the naked eye. To compensate the holders of these stocks for their immense sacrifices it was arranged to issue 10,000 preference shares of the nominal value of £1 each, entitled to a non-cumulative preferential dividend of £4 per share and 60 per cent. of any other net profits each year available for division. Then as regards capital, these preference shares were entitled to a preferential payment of £10 per share, and the right to four-fifths of any further assets which might be available for distribution in a winding up, including any amount which might be produced by the calling up of the uncalled ordinary share capital. Owing to the large number of interests into which these preference shares had to be divided, they were issued to certain trustees, who created against them 1,000,000 in trustees' certificates, and the value of all the preferential dividends and rights can be judged from the fact that if a holder of these certificates was particularly plausible and brazen, he could occasionally dispose of them at prices ranging from 6d. to 1s. 3d. Having allowed this bale of paper to float about for some years, meanwhile they carefully considered the matter, the directors came to the conclusion that the business of the company was being dreadfully damaged by the existence of such "securities," because—let the news go forth to all the world—it was keeping the ordinary shareholders out of a dividend! To cut a long story short, certificate holders were called together on July 14 and by a big majority agreed to accept the board's offer of 2s. for each slip of paper. The scheme, it seems, involved an application to the Court for the protection of the trustees of these preference shares, but technical difficulties arose, and it will be necessary to promote a bill in Parliament to give effect to the proposal. The next item of intelligence that we encounter in the report is the fact that the re-organisation of the New Zealand Land Association has been completed during the year, and for the first time shareholders are favoured with a statement of accounts of the agency's child. With certain items the parent's own balance-sheet has made us familiar, and we did not have to learn that the share capital of this land company was £195,966, and the outstanding debenture stock £356,692, nor that most of its cash had been lent with childish simplicity to the extravagant creator. It comes as a pleasant surprise, though, to find the concern possessing £73,968 in Exchequer bonds, and that it is free of floating debt. Properties in New Zealand and Australia are valued at £226,146, and live stock at £50,306, while £58,843 is due on sales of land. The profit and loss account, however, affords the most instructive study. We find that in the year to March 31 the company received a revenue of £8,056, which cost £8,227 to earn, and that after crediting £639 brought forward, and deducting £14,268 for debenture interest, there is an adverse balance of £13,800. Now what we want to know is whether the

Agency Company includes this unearned debenture interest in its own profits, because presently we believe it intends to re-absorb the land company, and then this debit, together with anything more that may be incurred, must be faced. It is another illustration of the utter confusion in which the company lives, and no wonder the shareholders constantly cry—"more light." The Agency's own figures afford the usual melancholy study. Its total revenue for the twelve months ended June 30 was £226,286, or £1,256 less than in the preceding year, while total charges were a trifle higher at £120,771. Land and income tax draw away £4,465, and after meeting prior lien and second debenture stock interest with £100,057, there is the startling sum of £392 to be placed to the credit of third debenture stockholders, making their total balance £1,631. A big increase has occurred in the company's floating liabilities, current accounts being up from £160,517 to £171,305, while bills payable have increased £44,269 to £143,787, and £35,302 more at £143,516 was owing to the Land Association. We are glad, however, to find the company possessed of £100,313 Exchequer bonds, which it did not have a year ago, and this without any diminution in its cash holding, which indeed is higher at £242,817. Advances on wool and produce on hand have risen £57,000 to £488,322, secured loans and advances are a little higher at £1,094,393, and properties and stock come to £211,346 against £230,840. The company's offices, wool stores, and premises have been increased by a small sum to £259,677, whereas they should be substantially written down, merchandise, stationery and stamps show a reduction of £25,696 to £129,537, and the amount lent on current accounts is down from £477,722 to £414,127. Of course everything will be all serene now that the drought has broken up, and it is hoped that a succession of good seasons may be looked for, but we fear the measure of Colonial prosperity necessary to set straight the affairs of this company is beyond the meditative capacity of men's minds.

India Rubber, Gutta Percha and Telegraph Works Company.

The directors of this fine old company have an excellent record to place before their shareholders for the year to September 30, notwithstanding that trade depression and ever increasing competition led to a falling off in general business. From the report we learn that the cable to connect San Francisco with the Sandwich Islands, referred to last year, was laid for the Commercial Pacific Cable Company by the steamer *Silvertown* on January 1, and that the *Dacia* and the *Buccaneer* have been employed in cable repairing work. Evidently these contracts brought in good profits, as revenue rose sharply and shows an advance over the preceding twelve months of £32,371 at £196,096. General expenses were up about £8,000 only, and the board could easily have made a big dividend display had it been so minded. But as will be seen from the subjoined table, the allowance for depreciation is increased no less than £26,690, and we are glad that the necessity of writing down such rapidly wasting assets as ships is now recognised. A year ago reference was made in these columns to the danger of leaving the inevitable depreciation unprovided for. This important allocation having been made, the net balance is about £3,000 smaller than in 1901-2, but it is still more than sufficient to provide the regular 10 per cent. dividend, and the balance carried forward is increased from £62,361 to £66,930.

	Years ended September 30.			
	1900.	1901.	1902.	1903.
	£	£	£	£
Trading profit	167,764	155,236	163,725	196,096
General expenses ...	64,179	62,346	67,991	76,055
Income tax, directors' fees, etc.	7,140	6,191	6,720	7,322
Depreciation	17,206	18,642	19,460	46,150
Debenture interest ...	12,000	12,000	12,000	12,000
Net balance	67,239	56,057	57,554	54,569
Brought forward	31,511	48,750	54,807	62,361
Total available ...	98,750	104,807	112,361	116,930
Dividend (10 per cent.) ...	50,000	50,000	50,000	50,000
Carried forward	48,750	54,807	62,361	66,930

In consequence probably of the completion of the Commercial Pacific Cable Company's contract the stock-in-trade and expenditure on account of unfinished work shows a reduction of £326,652 to £500,555, and on the other side of the balance-sheet sundry creditors are £303,788 lower at £140,603. Cash, stock, debts, etc., at Persan and agencies amount to £258,603, against £231,497, and cash with bankers and in hand is a trifle higher at £36,099, but debtors and bills receivable have fallen £11,796 to £98,034. Properties, plant, etc., including steamships, are valued at £553,662, or £10,627 more, and the reserve fund stands at £450,000. The company holds a considerable interest in the popular Palmer Tyre Company, and as we pointed out when dealing with that company's report a short time back, the undertaking is now being conducted on very cautious and prudent lines. Altogether a very satisfactory display, and although competition may become increasingly severe, this concern should have little difficulty in holding its own.

The New Dock Scheme.

The following criticism of the Dock Companies' scheme for the improvement of London's port is well worth consideration, since the writer is one of the best mercantile authorities in the City upon docks and dock charges. That landing charges must be imposed is generally admitted since the present revenue of the Port is small, and it is therefore only a question upon what scale they shall be based. With regard to the Dock Companies having a voice in the control of the port, this we fear must be put up with unless Greater London is prepared to buy them out, which in the present state of general post-war impoverishment, it cannot well afford to do. Were we blessed with the government of a benevolent despot the matter would be simple. A stroke of the pen and a ukase could be issued expropriating the companies and handing over their docks and buildings to the County Council. But alas! when we wipe out vested interests we pay the pound of flesh they ask with blood as well. Though the companies may have to come in, this is no reason why the Corporation or the Thames Conservancy should be given places on the Port Authority, however constituted, and the ratepayers should concentrate their energies to prevent the Government giving in to Turtle.

To the Editor of The Investors' Review.

Sir,—The qualified approval of the new Port of London scheme in your last issue is more than it deserves, for as a matter of fact it is quite impracticable. Its basis is a landing charge on goods equal to what is charged in Liverpool. The charge there averages 1s. 2d. per ton, a burden which London trade cannot bear. Liverpool, compared with London, is not a competitive port; for we have here to compete with the great continental ports of Hamburg, Antwerp, Amsterdam, and Bremen, etc., where the charges are already something like half those of London. We have also to compete for our goods with Southampton, the various south-eastern railway ports, Hull and Grimsby. Such port charges as those of Liverpool, would deprive London at a blow of the great re-export trade in produce still left to us, and would drive the home distributive trade to the outports. Why should the merchants of London consent to see their trade driven away for the good of the Dock Company? You may depend that they will do no such thing.

Then, in round figures the toll which the Dock Company propose to levy on lighters is 1d. per ton, and that on four million tons would come to £18,000 to be levied on the public and private wharfingers of London. They also will never consent to have such an added burden for the benefit of the London and India Docks.

Port landing dues averaging 1s. 2d. per ton on the eighteen million tons of oversea and coastwise trade of London would mean an annual and entirely fresh charge of over one million sterling, or, with the new lighter charge, say £1,020,000. Of this the docks would get say, one-third, or £340,000 a year; truly a fine haul for the shareholders, whose dividends, as we all know, are of a vanishing character. It is true that they have been raised, against the protest of the Royal Commission, by an extra

charge of 6d. per ton on shipping, the old rate being only 1s., while it is now 1s. 6d. On 2,000,000 tons this is a haul of £100,000 a year. The Dock Company now propose if they get their way, to go back to their old and proper charge. They may well do so, as their net gain (deducting this from the new landing charges, etc.), would be £240,000 a year. This would pay 4 per cent. on the proposed new outlay of £2,000,000 by the docks, and still add an extra 1 per cent. on the ordinary share capital of £16,000,000.

The proposed new expenditure on docks is quite insufficient, also, for the Royal Commission estimated that £4,000,000 was required to put them in a proper condition. The Dock Company also forget that the proposal of the Royal Commission, accepted by the London County Council, was that £2,500,000 for deepening the river should be supplied by the ratepayers. The deepening of the Thames is much more important for London than the provision of new and wider streets. London lives by its river, and to bring it up to date is a truly municipal concern—as well as an all important national consideration.

The scheme of the Government was based on the report of a very strong Royal Commission, which was again founded on an immense mass of mercantile and shipping evidence. In its broad lines the Bill follows the scheme laid before the Commission by the London Chamber of Commerce, which before its inception consulted, through a joint committee, all the leading London trading associations. The Board of Trade deserves every credit for acting so promptly as it has done, and for following so closely the trend of mercantile opinion. The opponents of the Bill are those old re-actionaries the City Corporation, backed up by its off-shoot—the Thames Conservancy. It is to be hoped, therefore, that the Investors' Review, for once in its life, is not about to turn Tory, and to support the forces of re-action, as embodied in the Guildhall. That the Bill is not perfect may be granted, but its blots may be removed by small amendments without affecting its principle. For instance, the objection of bankers to the proposal that the conversion should be in cash, may readily be met by accepting the recommendation of the Commission, that it should be in bonds. London shipowners and merchants have no love for the Dock Company, but they wish to do it full justice and to give it a fair price for its undertaking. They will never, however, submit to the new scheme it has promulgated.

I am, sir,

Yours faithfully,

Merchant.

The Italian Budget.

Italy is to be congratulated on the improving condition of its finances, and on the admirable budget statement of Signor Luzzatti, the Finance Minister. The year 1902-3, he said, closed with a credit balance of 69,713,000 lire, and in the current year a surplus of upwards of 6,000,000 lire is expected, which will be increased in the succeeding year to one of 7,220,000 lire. Everything, he added, went to show that the estimated surplus would be greatly exceeded, because the revenue is growing so satisfactorily. What this means to Italy is made clear by other figures. On June 30, 1902, the Treasury deficit amounted to 320,820,000 lire. This was reduced on June 30 last to 273,227,000 lire, and the Treasury bonds outstanding have been reduced from 300,000,000 lire to 192,000,000 lire. So well is the Treasury provided with means, that it has not required to apply to the note issuing banks for any advance, will not even need help from them in paying the debt coupons due next January, a state of affairs, Signor Luzzatti adds, unknown since the foundation of the Italian kingdom. The Minister goes on to indicate the willingness of Italy to enter into lower tariff engagements with other countries, for which purpose certain import taxes will be reduced or repealed. He also indicated that the conversion of the 4½ per cent stock into 3½ per cent. stock will be proceeded with at once, involving a saving of perhaps 6,000,000 lire annually in the budget. At present the 5 per cents. are not to be converted, partly because they are held abroad, but he is confident that France, Germany, and Great Britain will assist Italy in this operation when the time for it arrives. If it can be carried out on the lines anticipated, it will save 40,000,000 lire per annum, or about £800,000. We hope circumstances will permit this great financial operation to be carried out at no distant date. Italy is doing so well that her administration deserves every encouragement from foreign creditors, from everybody.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Canadian Pacific Railway Company.

Applications are invited for an issue of £2,803,000 sterling perpetual 4 per cent. consolidated debenture stock of the above company, identical in all respects with that already existing. Of this amount £1,417,500 is required to meet the cost of the Atlantic steamship line acquired some time ago, consisting of fifteen vessels and their appurtenancies, and the balance of £1,385,500 goes to pay for 471 miles of additional lines constructed and acquired pursuant to authority given by the shareholders. The price of issue is 106 per cent., payable in instalments of 10 per cent. on application, 16 per cent. on allotment, January 4, and four of 20 per cent. each on February 8, March 7, April 6 and May 9, but payment may be made in full on any Thursday after allotment, under discount at the rate of 3 per cent. per annum. A full six months' interest will be paid on July 1, but even with this reduction the stock, although a good enough security, seems dear in the present conditions of the money market, and the underwriters who got 2 per cent. for their risk may expect to receive a proportion of their guaranteed amounts. Comparison with the price of the existing stock is misleading because that contains nearly £2 of accrued interest. Everything allowed for, however, the new stock may be about 25s. per cent. cheaper than the old.

Canadian Transit Co., Limited.

This company has been formed, under the Canadian Joint Stock Acts, to take part in the transportation of grain and other products between the Great Lakes and Montreal, and to acquire a fleet of vessels for this purpose. The share capital is £200,000 ($1,000,000) in £1 ($5) shares, of which 165,000 have been issued, with £135,000 5 per cent. first mortgage debenture gold bonds, to the New Canadian Co., Limited, under a contract for the supply of the fleet and for the provision of £25,000 working capital, and the whole amount is offered for subscription by that company. Twelve vessels, of a carrying capacity of 60,000 to 70,000 bushels each, are to be supplied, four of which are to have sufficient extra power to tow two other vessels of 70,000 bushels capacity, and with these working for seven months in the year, at two round trips per month, it is estimated that a net profit of £49,382 can be earned. Interest on bonds will require £6,750, and general expenses in Canada and Great Britain and directors' fees are put down at £2,500, leaving £40,132 available for depreciation, dividend, etc. Opinions of the Canadian Minister of Marine and Fisheries, and of the Montreal agents of the Allan Lines of Royal Mail Steamships, are put forward in support of the scheme, but, these notwithstanding, the undertaking appears to be too speculative for home consumption, or it would have been brought over here.

Junin Nitrate and Railway Company.

This is a Chilian company, having its head office at Iquique, which is anxious to raise funds on this market by an issue of £150,000 5 per cent. first mortgage debentures at 98½. The authorised capital is £450,000, of

which £390,000 has been issued, and, in addition to a railway of about 80 miles between the Port of Junin and the nitrate grounds situated in certain districts in the Province of Tarapacá, the company owns three nitrate producing properties and three-fourths of the share capital the Recuerdo Nitrate Company, estimated to contain in all 13,300,000 quintals of nitrate. Profits for 1901 and 1902 amounted to £40,213 and £37,888, respectively, and for the first half of the current year they were £29,665, but with the new machinery at the Victoria oficina in full working order, it is estimated that a profit of over £80,000 per annum will be earned from the railway and nitrate production combined. Of the present issue, about £50,000 is to be applied to paying off a credit granted by one of the banks in Chili, and the balance will be used for the erection of the new works at the above mentioned oficina, for the improvement of machinery on the other properties, and, if opportunity arises, for the acquisition of new nitrate grounds. The debentures will be redeemed at par by annual sums of £15,000, commencing on January 1, 1906, or after 1908 the redemption may be accelerated, in which case the repayment will be at 103 per cent., and as they are secured by a first mortgage on the whole property, while the company has no power to create any charge ranking either prior to or pari passu with this issue, the offer seems to afford a good opportunity to investors.

Municipality of Port Elizabeth Waterworks Loan.

Applications will be received by the Standard Bank of South Africa, Limited, for an issue of £360,000 4 per cent. inscribed stock of the above municipality at the price of 97 per cent. The objects of the loan are to provide funds for the construction of certain contemplated works, for the provision of an unlimited supply of pure water, which will be brought by pipes from Sand, Palmiet and Bulk Rivers. At December 31 the Waterworks debt stood at £126,500, of which £80,000 has been redeemed under the consolidation scheme, and the entire debt of the town, exclusive of this issue, is only £264,000, while the official valuation of the property liable to rates within the area under the jurisdiction of the municipality has risen from £956,026 in 1864, and £2,072,583 in 1890, to £5,376,755 in 1903, and the principal assets, so far as waterworks are concerned, consist of the existing waterworks, valued at £452,221. Port Elizabeth is a progressive port, and one likely to do well in any circumstances, so that the security offered seems fairly good.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

R. K. Chester.—Both the companies you inquire about are, I think, respectable concerns. They have the advantage of small capitals, and financially their position is satisfactory. I doubt whether there can be much rise in value, at any rate for the present, as, generally, the outlook in that part of the world cannot be considered cheerful. If you can afford to wait I see no harm in your retaining these shares. Reports returned.

S. F. D.—(1) I hardly think you should consider this stock an investment. The company is earning very little more than its interest charges, and apparently the road is in such a condition that every penny has to be spent on it. To do this further charges are being created automatically, and I am inclined to think that the yield is not sufficient for the risk incurred.

(2) As a speculative purchase these shares are probably worth attention. As no doubt you are aware, the company depends on the success of one single industry. There are signs that this is likely to do fairly well, and the natural deduction is that this concern will benefit.

(3) No, hold on and make yourself as disagreeable as possible when promises of profit are not fulfilled.

F. E. D.—I am afraid there is little chance of much improvement in the value of the shares you inquire about. The Company is a thoroughly honest concern, but I do not think its prospects are very brilliant.

Passing Events.

The majority of the Transvaal Legislative Council, composed of mining magnates and their nominees and official dummies, is certain to advocate some form of indentured labour. Still, a pretence of discussing the report of the Labour Commission will doubtless be made, for Sir Arthur Lawley told the Council in his opening address that no legislation would be introduced until after its views had been heard, and the sanction of the Home Government obtained. Neither of these buffers is likely to safeguard the working men in South Africa unless we manage to have a change at the Colonial Office before the Council can scramble through its ready made law imposed by the bosses —from below. That no time is to be lost is shown by the fact that Sir George Farrer at the first sitting gave notice of a bill to introduce indentured labour. Meanwhile, not only on the Rand, but throughout South Africa the whites are growing more and more discontented with the abject servility of the Government to the mine magnates. The necessity for recruiting unskilled labour outside the country is non-existent, for if a fair wage were offered Kaffirs would readily come forward, and if the capitalists get leave to import Chinese civil war will be in sight. And for this we have spent three hundred millions, sacrificed thousands of lives, and brought misery and woe to countless homes.

Lewisham and Dulwich it appears contain a large number of electors who are "engaged in commercial occupations," to quote the census. In other words, they are city clerks, and to them we humbly offer this suggestion. Before they cast their votes in favour of the ex-raiding African millionaire or the gallant warrior of the Stock Exchange, let them ask their employers whether salaries will be automatically raised to cover the increased cost of living which must naturally follow the introduction of a protective tariff. It is a simple little point, and for this reason we fear the city clerks, far-sighted as they are known to be, may have overlooked it. Yet for the sake of their families, if not for themselves, they should seek this information before returning a man with the nebulous fiscal views of Dr. Rutherford Harris or a "progressive Balfourite," as Major Coates humorously describes himself.

Rumours of a treaty between Japan and Russia were thick this week, but as yet no official pronouncement has been made. It is to be hoped that some pacific arrangement will speedily be published since the Japanese Ministers are finding it more and more difficult to restrain the bloodthirsty feelings of the nation. The latest attack on them has come from the Lower House of the Diet, the jingo party in which, having seized the opportunity of the Imperial Speech to carry a motion censuring the delay in the Government's dealings with Russia. Such an attack means that the House of Representatives will be dissolved, and if the war party carry the polls the position will be very grave indeed. Yet we cling to the hope that the peace may be kept, and time is on the side of Japan with Russia internally falling more and more towards chaos.

We are accustomed to cryptic utterances from that peculiar patriot, the Cape Town correspondent of the *Times*, but a message of his dated December 10 contains some words which seem to pass the usual bounds of political mysticism. He has been yarning about Chinese labour like a very "boss," and at the end of his message says: "Meanwhile distress and insolvencies are having an educative effect. The people are very terrorised over the question. I believe that if a strict ballot could be taken the results would surprise those who are making the most noise." This, we presume, is meant to be nasty for lovers of Africa, but what are we asked to infer from it? Does the man mean to say that the absence of work for whites and blacks will incline them to favour the importation of Chinese to take away from them what chances of employment they may now have? If not, will he please explain? We do not want another South African war just yet.

We shall watch with much interest the outcome of an experiment in Indian agricultural banks. The Simla Government has passed a law authorising the creation of these banks within well defined limits, and their operation

in various parts of the country. They ought to succeed if the people who want to borrow—the overtaxed peasantry—have really any security left to offer. And in proportion as they succeed the duties of the tax collector should be, for a time at least, lightened. Even if the banks charged 10 per cent. on money lent it would often mean a saving of from 30 to 50 per cent. to the unhappy victim of the local usurer. We hope the experiment will be vigorously carried out, and that such success may attend the initial efforts as will encourage the extension of the system.

The latest news from Somaliland is that our native levies have revolted and gone to join the Mullah. The ungrateful brutes. Here we give them the chance to go out and pot their brothers in a civilised fashion, under a decent flag, and they deliberately throw it away. All right, when we smash the Mullah—as we hope to some day—they will get their just deserts, even though it cost a few millions more to make the job complete.

In spite of Turkey having accepted the Austro-Russian scheme of reforms, fighting still continues in Macedonia, and the dawn of peace seems as far off as ever. The new corps of gensdarmes is to be commanded by an Italian general, who to save the Sultan's face is to nominally enter the Turkish service.

Surely the hanging of the latest Mahdi was an unwarrantable act on the part of the Egyptian military authorities. If he was dangerous his power could have been crushed by imprisonment, but his death not only makes him a martyr, but also opens up a possibility of his resurrection—by pretenders.

"In the realm of intellect he stands among the sceptred immortals." Thus speaks the *Edinburgh Evening News* in reference to the late Mr. Herbert Spencer, and speaks the truth. Perhaps Mr. Spencer attempted too much; we, at least, have always felt that his efforts to deduce general laws of social evolution from the arbitrary and more or less empirical collections of facts about beliefs, habits, laws, and characteristics of the various races of mankind was in large measure a failure. But even in his short-comings Mr. Spencer was great, and the illuminating commonsense which pervades all his writings is always impressive, while his unshakable faith in human progress stamped him as morally one of the greatest of modern men, while the range and depth of his penetrating intellect lifted him to the highest pinnacle amongst thinkers. He passed away in the fulness of years, having been born at Derby on April 27, 1820, and has left a deeper mark upon human thought than any man of his time, not even excepting Darwin.

People interested in insurance here will perhaps be amused, perhaps frightened, by a curious intimation in the New York financial telegram to the *Times*, dated December 8. In a previous message of the 5th, the writer had described sundry influences which have effected the Wall Street gambling hell—an almost daily occurrence of fairly prominent commercial failures, shrinkage in railroad traffics, reduction in export grain rates, falling wages, including a "general revision" of wages by the Steel Corporation, and so forth. All these things tended to depress markets, but at the later date mentioned he comes forth with a "bull" point, viz., the market view that the life insurance companies and other large institutions will attempt to "hold the market," in order to present good reports at the end of the year. What would we think here if financial authorities told us that our insurance companies were entering into a plot to keep the market from shrinking, so as to facilitate balance-sheet cooking.

The *Daily News* was misled. It said, on what it described as "good authority," that the managers of the Stock Exchange "in response to special request"—yes, to be sure—recently wrote to Mr. Chamberlain asking him to visit the building and address its members. Nay, irresponsible to said members though the managers may be, they could hardly venture so far as that without consulting the Committee on General Purposes, though it might be a strong temptation to men worn out by the iteration of golden legends from Africa to vary its monotony by listening to the romances of Joseph. But what the managers laudably did was to restrain this natural desire and to courteously answer the request from Birmingham by intimating that if the great word spinner liked to try the acoustics of the building it would be at his service after business hours. That did not suit the gentleman at all at all; so the thing is "hoff," as his supporters would say.

We are sorry to note that the branch of the Robinson Bank at Randfontein has suffered a loss of £3,000, stolen by a gang of masked men who gagged the manager and his assistant. This robbery, following that of a train "held up," gives some indication of the social condition of the Transvaal, and may help us to estimate with what success "Milnerism" is restoring order and peace.

Is the fur really going to fly in this fight with the Australian shipping ring? The brokers are said to have a fighting fund of £250,000 in hand, so their profits must have been fine—unless the money partly represents confiscated rebates—and the battle should bring profit to the shippers, provided they are strong enough and loyal enough to disregard the temptation of a 10 per cent. rebate, by which they have hitherto been induced to stick to the "ring." All hangs upon this point. The two powerful shipowning companies, Messrs, Lund and Messrs. Thompson, are now putting one steamer a week upon the berths and accepting cargo at decidedly lower freights than ruled under the "ring." But the brokers are not behindhand in ships, and we hope soon to be able to announce "free passages and all found" to Australia for effete jingoes and other distressful beings. They would find "protection" there, and plenty of it.

If the story just published by the directors of the Midland Railway of Western Australia is an accurate presentation of the facts, the Government of that money wasting and semi-bankrupt colony is just now engaged in attempting a confiscation job of a particularly scandalous character. Not content with harassing the company on all sides ever since unfortunate English investors were misled into finding the money for the railway, the Government has introduced into the legislative assembly a Bill which the directors contend will deprive the company of all its rights, and enable the Government to buy out the undertaking on their own terms. Other measures have also been introduced adversely affecting the company's interests, and the board tried to get justice by bringing the matter before the Colonial Secretary. Downing Street, however, declined to interfere, and directors do well to lay the facts before the public. They should be resolutely kept in mind, so that the next time Western Australia comes to the London market for a loan it can be reminded that the display of honesty is the first essential to borrowing.

We hear that Croydon has managed to raise a loan of £200,000 in 4 per cent. bonds running for five years, the debt to be converted into 3 per cent. stock at the end of that time on terms which have not been officially disclosed. Some say 93, others 93½. Yarmouth has also raised a loan of £100,000 on the same basis, that is in five year convertible 4 per cent. bonds, obtaining the money from a northern bank. Thus gradually our municipalities are being taught that the days of 3 per cent. loans at a premium or 2½ per cent. stock near par are over, and there will now be many imitators of these two towns. War, glorious war—so cheap for ratepayers.

The directors of the Manchester and Liverpool District Bank are to be congratulated on their decision. All negotiations, the chairman announces in a circular, with a view to amalgamation with Lloyds Bank are at an end, and the District Bank retains its independence. Every credit handler in the City was delighted at the news, for there can be no disguising the fact that, without any reflection whatever upon Lloyds Bank, a feeling of dread was excited by the magnitude of the risks to be borne by one institution had the two banks been fused. From this point of view we may congratulate both banks, for already Lloyds has attained a magnitude in liabilities to the public such as no other English bank habitually supports, and which must involve continual anxiety. The diversity of the types of business done on such a gigantic scale must be almost beyond the grasp of any one board of directors, and quite beyond the permanent control of any single general

manager. Good will come of this abortive effort at further amalgamation. It will tend to check a fashion which had become dangerous. All the more honour to the District Bank's board in having had the courage to draw back in time.

Truth deserves much praise for the campaign it is waging against the advertisements of certain disgusting American quacks, which now appear in many of the magazines. Two of the offenders are Harmsworth's *London* and Pearson's *Royal*, and *Truth* suggests that a thumping tax, say of 100 to 300 per cent. should be placed on this obnoxious form of dumping. But if the public ceased to buy any magazine that inserted these quack puffs the proprietors would soon cease to put them in.

Poor Mr. Emile Garcke appears to be sadly frightened over the prospect of Mr. Robert Donald's accession to the editorial control of the *Daily Chronicle*, and has begun in good time to squeal in his own paper, *Electrical Investments*. We thought he was more of a man.

Notes on Books.

Adam Smith's Wealth of Nations. A new and condensed edition, with preface and introduction by Hector Macpherson. (Edinburgh and London: Oliphant, Anderson and Ferrier. Price 2s. net).—This book deserves a hearty welcome. We read a good deal of it in the train the other day, and found it more interesting than most of the current literature now pouring out from the press. It has been well done, reverently and carefully, as much as possible in the words of Adam Smith himself. Many people fight shy of the original book, because it seems overloaded with details, and what Mr. Macpherson has done has been to strip the redundant matter off, and give the arguments and principles of the author as a lucid and uninterrupted whole. One result of reading this excellent little book, though, will probably be to entice many a student of political economy to go back to the bigger work. Some, owing to stress of time, may be compelled to limit their knowledge of "The Wealth of Nations" to what is conveyed in Mr. Macpherson's pages, but others with some little leisure left will certainly be drawn on by them to read the book as a whole, and to revel in the quaint, old-world illustrations with which it is so carefully packed. There is something to us singularly fascinating in the glimpses it affords of that old world of leisure where men "sauntered", and did not crowd the work of a thousand hours into one week, or fly around at seventy miles an hour, as we do.

There is a most interesting interview with Mr. Edward Marston in the current number of the *Book Monthly*. Mr. Marston is the head of the famous publishing house of Sampson Low, Marston and Company, and the oldest of our great publishers, a man who has had his ups and downs, his sorrows and triumphs, and who has remained through all fortunes an honourable and distinguished citizen. The notes at the beginning of the number, "Personal and Particular," are always interesting, and the illustrations always give it an added attraction. In the December number, we note specially the portrait of Mr. Sampson Low, who died in his ninetieth year, and who would have been, as Mr. Marston says, 106 years old had he been alive to-day. An excellent and interesting portrait of the late Lord Rowton, taken from an admirable sketch published by the *Daily Chronicle*, a sculptured portrait of the late Mr. Whistler, and a striking one of the late Dr. Robert Chambers are amongst the other items of greatest interest. The usual contents of the book embracing all the publications of the month, and the books nearly ready are supplemented on this occasion by a description of "the 100 best books and more" for Christmas gifts. Altogether to many people the magazine is indispensable.

The Bank of Adelaide has recently opened branches at Balaklava, Blyth, Brinkworth, Gulnare, Halbury, Hoyleton, Koolunga, Mundoora, Owen, and Port Broughton, and the Western Australian Bank at Black Range, Burtville, Cuballing Pool, and Duketon.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

East Indian Railway.

During the six months ended June 30 11 miles were added to this company's already great system, making a total of 1,936 miles, in addition to which various other lines were worked, bringing the total to 2,199¼ miles. Gross receipts for the half-year were £2,510,507, or £30,597 more than in the corresponding period of 1902, and expenses fell £50,323 to £817,932, leaving the net earnings higher by £80,920 at £1,692,575. Ratio of expenditure to total income was 32.58 per cent., against 35.01 per cent. It is pleasant to learn that despite a larger quantity of goods handled the train mileage was 484,231 miles less, due to an improvement of about 12 per cent. in the train loads. Passenger mileage, however, could not be reduced, and an advance in this department of 309,307 miles brought the net saving to 174,924 miles. Earnings from coaching traffic show an increase of Rs.9,84,169, all classes contributing, the gain in first and second class being attributable to the exceptionally heavy traffic from Delhi on the dispersal of the Coronation assemblage, and that in the intermediate and third class to the more extended movements of pilgrims and marriage parties. There were also improvements in luggage, horses, carriages, and special trains, and it is stated that the opening of several new stations and the natural expansion of the traffic contributed to these results. As already mentioned, an increase occurred in the quantity of goods handled, but the receipts fell away Rs.5,81,576, the decline being practically due to a very large reduction in coal, with less important contractions in cotton, provisions, rice, and sugar. On the other hand wheat improved 6¾ lakhs and smaller gains were to be seen in grain, railway plant and seeds. The large drop in the coal revenue was attributable to the reduced rates in the new coal tariff brought into operation on August 17, 1902. A very heavy drop, no less than Rs.7,86,916, took place in the permanent way expenditure, only 29.20 miles against 62.47 miles being relaid, and we are glad to learn that progress in this matter is likely to be considerably greater in future. Locomotive charges increased a trifling amount, but carriage and wagon expenses were lower by the important sum of Rs.4,43,192, due to a smaller number of vehicles repaired and renewed. This was caused by the disturbance to ordinary operations on account of the transfer of the shops from Howrah to Lilloah, and the report tells us that the outlay in future half years is likely to be abnormally high in overtaking these arrears. The company is still very short of rolling stock, and it is good to hear that an additional 800 wagons are in course of shipment, and that the board has authorised the agent to apply for the sanction of the Government to the supply of a further 1,000 wagons, with 50 brake vans. Net earnings are returned at Rs.2,46,64,092, from which is deducted Rs.1,47,04,691, in respect of charges to meet the annuities, interest, and contribution to the provident institution, leaving a divisible surplus of Rs.99,59,401. After deducting income-tax the company's share is Rs.9,91,127, and realised £66,034, which enables the board to recommend a dividend of £1 0s. 6d. per cent. on the deferred annuity capital and class "D," in addition to the guaranteed interest of £2 per cent.

Bombay, Baroda and Central India Railway Company.

A recovery took place in this company's revenue during the six months ended June 30, the receipts from all sources being Rs.8,82,107 better than in the same period of last year at a total of Rs.97,83,465. At the same time expenditure rose Rs.5,34,294 to Rs.43,44,542, so that the net earnings are up Rs.3,47,813 to Rs.54,38,923, and the ratio of expenses to income shows an advance of 1.61 per cent. to 44.41 per cent. Intermediate and third-class passengers gave rather less revenue, but first and second improved, together with season tickets and parcels, luggage, etc., the total coaching income being Rs.74,488 higher at Rs.29,49,298. General goods and merchandise carried increased nearly 100,000 tons, cotton, oil seeds, and wheat and flour doing best, but there was a big decrease in food grains other than wheat, and a slight fall in the carriage of salt. On the expenditure side we find locomotive outlay up Rs.1,65,322 and traffic expenses Rs.1,28,732 higher, with smaller advances in maintenance, carriage and wagon outlay, general charges, and miscellaneous. Heavier expenditure on renewals of rolling stock was the main cause of the increased revenue outlay. After providing for interest on guaranteed capital stock and bonds, and on overdrawn capital balances, the amount of surplus profits divisible between the company and the Government is Rs.27,14,808, of which the company's share is Rs.13,57,404. Indian income-tax absorbs Rs.17,290, leaving Rs.13,40,114, compared with Rs.11,66,305, and Rs.12,10,000 has been withdrawn from India, realising £87,619. The directors propose a dividend of £1 3s. 6d., making £3 13s. 6d., with the guaranteed interest compared with £3 11s. per cent., but the payment will absorb £88,716, and the difference will be provided from undivided balance on hand, and further remittances expected from India. On the State lines the receipts fell away Rs.21,43,747 to Rs.1,28,23,103, with a decline of Rs.5,48,114 only to Rs.56,61,731 in the expenditure, so that the net earnings are Rs.15,95,633 smaller at Rs.71,61,372. They belong entirely to the Secretary of State. Coaching traffic showed an advance of Rs.1,84,509, so that all the falling off is in goods traffic, the decrease being no less than Rs.23,63,667. It can all be traced to the traffic in food grains, which declined Rs.22,19,226, in consequence of the abatement in the requirements of previous years from other districts for local

consumption. The recovery in local conditions, however, has not been sufficient to restore the full normal activity of the export trade, but this the directors say may be hoped for in the coming year, as the consequence of the beneficent rains of the recent monsoon. The directors again refer to the representations made to the Secretary of State in regard to his right of purchase of the company's line in 1905. They state that no reply has been received to these representations, which are understood to be under the consideration of the Government of India, and appeal to the proprietors to consider both their own and the company's interests by avoiding anything liked forced sales of their holdings. The directors have taken the opinion of counsel as to the proper interpretation to be placed on those clauses of the contract which govern the price to be paid by the Secretary of State, and which determine the basis of calculation of the annuity which the Secretary can require the company to accept in discharge of his purchase obligation. They feel that in a matter of such importance no time should be lost in obtaining from the highest Court a judicial interpretation of the clauses bearing on the question, and on October 30 last addressed the Secretary of State on the subject. As yet no reply has been received.

Madras Railway Company.

For the six months ended June 30 this undertaking earned a gross revenue of £582,927, or £28,832 more than in the opening half of 1902. Coaching traffic contributed £9,246 to the increase, passengers carried being up 148,668, with third-class doing best, while goods improved 7,096 tons, meaning an additional revenue of £22,875. A sharp rise occurred in grain and pulse, and raw cotton also did well, but coal and coke and dyes and tans fell away. Good crops, better rates, and an increasing diversion of the traffic towards Madras instead of Bombay account for the larger receipts under raw cotton, and the increased earnings under grain and pulse are mainly attributed to an exceptionally heavy export of rice to the company's stations in Malabar and Cochin from the North Arcot district, instead of from Burma. The decrease under coal and coke corresponds with reduced consumption of such fuel on the goldfields, owing to the introduction of electric power, and the drop in dyes and tans is due to bad crops of turmeric. Regarding the expenditure it will be remembered that twelve months ago the Government engineer expressed the opinion that the rate of renewals of iron rails was insufficient. It is no surprise, therefore, to find an increase in the cost of maintenance of £32,331, and although part of the advance is due to certain large credits for returned stores affecting last year's accounts, increasing demands for heavy rail replacements are in the main responsible. Fifty-five miles of road were relaid against 31 in the corresponding period, and omitting from consideration the special credits referred to, the cost of line maintained was £72 against £57. A decrease occurred in the locomotive department of £4,792, no actual replacement of engines taking place, and again the Government inspector observes that a larger programme of engine renewals as compared with repairs is necessary. The directors say that the subject is having close attention, and we are glad to hear it, because the English investor makes a very good thing out of finding the money for India's railways, and no niggardly policy in the matter of revenue expenditure must be permitted. Increases occurred in carriage and wagon and traffic expenses, and as the total outgo was £293,564, against £257,394, all the advance in gross income is swept away, and the net balance shows a reduction of £7,337 at £289,363. It gives a statistical return on the capital bearing interest of £5 1s. 1d. per cent. against £5 4s. 4d. per cent. last year, but this does not represent the return to the shareholders for two reasons, first, because any surplus over the guaranteed interest is divided in equal proportions with the Government, and secondly, the contract rate of exchange does not apply to such surplus. Dividends, therefore, will be at the guaranteed rates, the question of surplus remaining for subsequent consideration. In the report issued last June the board put before the shareholders its views on the subject of a fair valuation of the company's property, and now observes that the position is unaltered, the Secretary of State, in reply to the board's representations, having stated that he is not in a position to make any announcement as to the arrangements that will be made in 1907 should the Government decide to purchase the railway. The question can very well wait, because later on we may have a Secretary of State possessing at least a rudimentary knowledge of Indian financial matters. Meanwhile shareholders are reminded that the period on which the mean market value of the stock has to be calculated if the property is purchased in 1907 will begin to run from April 1 next. That means that proprietors must not depress the market by throwing out their holdings. In consequence of the rapid expansion of the company's system with its attendant additional labour, the board wishes to give a bonus to the staff, and proposes to take a couple of thousands from the company's funds, in addition to the grant authorised by the Government.

Burma Railways.

This company's report covers a complete year to June 30 last, and during that period the open mileage has increased 159 miles to a total of 1,337 miles, all extensions or branches under construction on July 1, 1902, having been opened for traffic. Negotiations are at present in progress with the Secretary of State concerning a further 237 miles, and a considerable capital expenditure is also being incurred on works which have been found necessary to bring the lines taken over by the company up to a standard commensurate with its traffic, and to increase its present carrying capacity. The outlay which will probably exceed £500,000 is intended to equip the line with additional rolling stock, to double certain sections, to strengthen the older types of girders and generally to improve the condition of the permanent way, to provide additional crossing stations and siding accommodation, and other works of a similar nature. Revenue for the past twelve months was Rs.1,29,20,295, or Rs.5,66,157 more than in the preceding year, nearly the whole of the advance being due to the passenger traffic. Goods earnings taken as a whole show no improvement. Traffic on the new lines opened was small, more time being required for its development. On the older portion of the system the business may be considered satisfactory, but in rice, the principal commodity carried, there was a falling off of about Rs.4,00,000. In explanation of this decrease it is stated that the rainfall was somewhat capricious in the districts served, resulting in the destruction of crops, and that the export trade was less favourable than in the previous season. Other decreases were not important, and against the big fall in rice fair increases occurred in timber, sugar, and certain dyes and tans. Expenditure went up Rs.6,07,727, advances occurring under every head, with the exception of special and miscellaneous charges. The additional open mileage is partly responsible, expenses always being high at first, but in addition the maintenance expenditure on the entire system has increased owing to the increasing age of the permanent way material and rolling stock, and to heavier repairs being required on the station buildings. Net earnings for the year were Rs.51,77,090, or Rs.41,568 less than in the previous year, and after adding Rs.5,872 for outstandings, the total available is Rs.51,82,962. Interest charges having been met, the balance divisible between the Government and the company is Rs.21,61,229, of which the company's share is Rs.4,32,246, or one-fifth. Deducting Indian income-tax and adding a small balance in India, the total is Rs.4,21,282, of which Rs.4,21,000 has been remitted to England, realising £28,121. This is not quite sufficient to pay the proposed additional dividend of £1 10s. per cent., making £4 per cent. for the year, so the balance carried forward is reduced from £9,431 to £7,552.

Great Indian Peninsula Railway Company.

For the six months ended June 30 this company's revenue was Rs.3,40,14,577, being an advance of Rs.22,14,917, compared with the opening half of 1902, while the expenditure increased Rs.11,08,791 to Rs.1,47,18,529, so that the net revenue is better by Rs.11,06,125, at Rs.1,92,96,048. Coaching receipts went up Rs.2,82,681, a large part of this being due to the Delhi Durbar and to traffic connected with the Somaliland expedition. Troops and police showed a drop of Rs.79,949, and third-class passengers gave rather less owing to a fresh outbreak of plague at up-country stations, and to the recovery of the country from famine, obviating the necessity of movements to relief camps and elsewhere. Under goods there was an advance of Rs.18,47,075, good crops, and favourable export rates causing smart increases in cotton, wheat, linseed and til seed. A heavy falling off occurred in rape and mustard seed traffic, notwithstanding that the area sown and the yield both in the United Provinces and in the Punjaub was considerably in excess of the previous season, the explanation being a contraction in the European demand. Grain and pulse gave Rs.3,00,197 less, owing to stocks depleted by the famine of 1899-1900 being replaced last year, since when the movement in all food grains has fallen to its normal level. The increased expenditure was fairly spread over all departments with the exception of general charges, and is accounted for mainly by the increased train mileage and the larger volume of traffic dealt with. Maintenance of way and works cost an extra Rs.3,54,801, special expenditure being incurred in the replacement of rails and extensive repairs to bridges; locomotive expenses rose Rs.3,19,262, carriage and wagon outlay Rs.1,46,278, traffic charges Rs.1,81,462, and special and miscellaneous expenditure Rs.1,07,253. Surplus profits are adjusted once a year only, and the net earnings for the twelve months ended June 30 come out at Rs.2,67,22,145. Of this the contract amount of Rs.2,00,00,000 is payable to the Secretary of State and interest charges absorbed Rs.2,54,818, leaving Rs.64,67,326 divisible between the Government and the company. The latter's share is Rs.3,23,366, and after deducting Indian income tax the balance remaining realised £21,065. To it is added £1,082 brought forward, making £22,147, and the directors propose a dividend of 17s. per cent., absorbing £21,887, and leaving £260 to be carried forward.

Indian Midland Railway Co., Limited.

This company's figures are included with those of the Great Indian Peninsula Railway, but a brief reference to them may be useful. In the opening half of 1903 the total revenue was Rs.58,15,830, or Rs.5,68,761 less than in the corresponding period of last year, so that the G.I.P. system brought all the extra traffic obtained by the combined lines. Working expenses dropped Rs.2,15,919 to Rs.25,16,582, and the net income is smaller by Rs.3,52,842, at Rs.32,99,248. Of the various branches of coaching traffic some showed improvement, and others decreases, the net result being an advance of Rs.1,01,,073, but public merchandise and military stores declined by the heavy sum of Rs.7,57,222, serious decreases taking place in cotton, grain and pulse, jawar and bajra and other grains, rape and mustard seeds, and sugar unrefined. Rice, til seed and salt did better. Decreases occurred under all heads of expenditure, the lead being taken by locomotive expenses down Rs.1,29,751. General charges fell Rs.31,696, traffic expenses Rs.31,270, and carriage and wagon outlay Rs.15,305. Capital outlay for the half year was very trifling, but £582,900 2½ per cent. debentures were renewed at 3½ per cent., and are to run for three years.

South Indian Railway Company.

The length of State line worked by this company on June 30 last was 1,123 miles, or the same as at the end of the previous year, but the company also works various other small railways, so that the total in operation was 1,236 miles. An additional length of

about 30 miles of the Travancore branch was opened on August 1, and it is hoped that the Panalur-Quilon section (28 miles) will be opened shortly, with the through route to Quilon ready for traffic within the next few months. The remaining portion of the Tanjore District Board Railway—Pattukkottai to Arantangi, 28 miles—is expected to be opened in the current month. Business was good in the first half of the year, total receipts showing an improvement of Rs.8,55,261 to Rs.61,12,964, while the expenditure was Rs.1,71,504 lower at Rs.22,91,410, the ratio of expenses to total income being down 9.36 per cent. to the exceedingly low figure of 37.48 per cent. We rather regret, however, to see the chief saving under the head of maintenance of way, and it appears that only four miles of special renewals were executed as against 11 in the corresponding half of 1902. Then locomotive charges continue lower than normal, owing to the deferred charges for new engines which will come into succeeding accounts, and it is not to be expected that this low ratio can be maintained. The greater part of the increased revenue came from coaching traffic, which rose Rs.4,52,588, being the highest sum received in any half year. Exclusive of season ticket holders the number of passengers was 7,424,101, third-class contributing the usual 99 per cent. Weight of general merchandise carried was 576,833 tons, meaning an increased income of Rs.2,73,773, this being also a record take. The chief advance was in oil seeds, but grains and pulse, spices, and stone and lime also did fairly well. Decreases were rarely important, and only a moderate decline in sugar need be mentioned. After adjustment of outstandings and payment of interest and other charges, the surplus of net profits divisible is Rs.24,95,988, of which the company's share is Rs.4,15,533, and has realised £27,052. Adding £7,185 brought forward and other revenue, the total for disposal is £34,379, and the directors propose a dividend of 40s. per cent., making £3 10s. per cent. for the half-year, or 5s. per cent. more with £15,296 carried forward.

Bengal Central Railway.

For the six months ended June 30 this company's gross traffic receipts were Rs.6,20,225, or Rs.2,472 more than in the corresponding period of last year, but there was a great advance of Rs.82,020 to Rs.4,40,636 in the working expenses, the percentage to total income being 12.99 up at 71.04 per cent. In other words, the cost per mean mile worked per week averaged Rs.122.02 against Rs. 99.3 in the first half of 1902. The principal advance occurred under maintenance, and this is entirely due to a larger number of sleepers having been replaced to make good the deficiency reported last half year. Locomotive expenses also showed a fair increase owing to an adjustment of accounts for repairs previously executed, and the additional train mileage and carriage and wagon expenditure was higher because of a good deal of repair and renewal. A year ago the special and miscellaneous charges included a credit in adjustment of charges for shunting at joint stations, and for this reason the item in the existing accounts is greater by Rs.11,639. General outlay was slightly higher, and traffic expenses showed a small decrease. Coaching earnings were less, chiefly third-class traffic, and against small gains in grains, betel-nuts, vegetables and rice, a sharp drop occurred in jute, and less important declines in coal and sugar. Net earnings come out at Rs.1,79,589, or Rs.76,547 less, and after deducting Rs.4,066 interest on overdrawn capital, a sum of Rs.1,75,523 is left for division. One-fourth of this belongs to the company, and at 1s. 4 1-32d. per rupee, yielded £2,931. Twelve months ago the directors placed £500 to a contingent reserve for sleepers, but this sum is now written back, and with £754 brought forward, the amount available is £4,232. Therefore a dividend of 15s. per cent. can be again paid, making, with the guaranteed interest, 2½ per cent. for the year, and leaving £405 to be carried forward.

Southern Punjab Railway Company.

Despite the very satisfactory increase of Rs.81,027 to Rs.4,17,056 in the coaching traffic, this company's total revenue for the six months ended June was only Rs.29,933 more at Rs.11,32,618 than in the opening half of 1902. This was almost entirely due to a heavy drop in the sum received on account of previous adjustments, as the goods traffic was merely Rs.9,151 lower at Rs.6,96,016. Working charges are at the fixed rate of 52 per cent., and absorbed Rs.5,88,961, against Rs.5,73,396, so that the gain to net revenue was the trifle of Rs.14,369 at Rs.5,43,657. Converted into sterling this gave a sum of £36,244, and with interest on deposits and investments, the entire revenue was £37,894. Interest on debenture stock, Indian income-tax, and expenditure in England altogether absorbed £11,669, leaving £26,224, to which is added balance brought forward, etc., making £30,939. Secretary of State's share of surplus profits is £5,144, and from the balance of £25,795 remaining, it is proposed to pay an interim dividend at the rate of 4 per cent. per annum, and to carry forward £6,475.

Interoceanic Railway of Mexico (Acapulco to Vera Cruz), Limited.

The fall in the sterling value of the Mexican dollar seriously affected this company's operations during the twelve months ended June 30. Average rate of exchange was 19 5/16d. against 22d. in the preceding year, the lowest value being reached in December, when the dollar was worth no more than 18 3/16d. The result of this depreciation is seen in the fact that although the gross receipts improved by the considerable amount of $911,936 to $5,224,397, the working expenses were up no less than $946,280 to $4,374,787, so that the net profit was worse by $34,344 at $849,609. By increasing the working expenses and reducing the sterling value of the net dollars earned, the fall in exchange affected the net revenue to the extent of £26,000, the amount being £65,439 against £73,320. As compared with the previous year, the number of passengers carried increased 80,207 and the receipts $50,106, the advance being attributed to the greater prosperity of the lower classes of the population. During the period under review authority was obtained to abolish second-class travel on the branch lines, with the result that a fair proportion of those who previously used the second-class have travelled first-class. Goods carried showed a decline of 20,648 tons, but the receipts improved by the important amount of $751,635, a greater average rate having been obtained per ton handled. The work of surfacing the reclaimed land at Vera Cruz, which was being carried out by the company for the Government under contract, has been completed during the year, and consequently only 18,070 tons of material were carried for this purpose as against 121,460 tons in the previous year. Other important contractions took place in building materials and coffee, while the principal improvements were shown in fuel, flour, iron, lumber, minerals, pulque, railway materials and sugar. As is known the Mexican Government in July last granted the railway companies permission to add 15 per cent. to the tariffs for passengers and goods, with certain exceptions, on the understanding that should the premium on gold fall to 120 per cent., which would make the dollar worth 22.73d., the privilege would be withdrawn. Such increased rates came into effect on September 1, but were withdrawn in November owing to the dollar having reached the mentioned value. The railways now want the increase reinstated as the dollar is again below the limit fixed. Relations between the four lines, members of the Mexican Traffic Association, continue to be harmonious. Including £302 for interest and transfer fees, the total net balance is £65,741, and after meeting interest on prior lien debentures and 4 per cent. debenture stock, the balance remaining permits of a payment at £4 5s. 4.032d. per cent. per annum on the 4½ per cent. debenture stock according to the dates of issue. Nothing is available for the 7 per cent. "A" debenture stock paid off last March, and the holders have been so informed. It seems probable that in the coming year some important developments will take place vitally affecting the company's future. The National Railroad of Mexico have lately acquired a large holding of this company's stocks and shares, including the £1,000,000 4½ per cent. debenture stock disposed of to the Mexican Government. Subsequently the National directors made it known that they were desirous of entering into an arrangement under which the management of the Interoceanic system should be entrusted to them. After negotiations an *ad referendum* agreement was arrived at for the operation and maintenance of the system, with expenditure on capital account not to be undertaken without the approval of this company, but such approval is not to be arbitrarily withheld. The agreement is for one year from January 1, 1904, and thereafter until six months' notice in writing is given by either party to terminate, and the board of this company recommends its acceptance.

Egyptian Delta Light Railways, Limited.

The work of extending the mileage of this company's lines goes steadily on, and the average open for the year ended September 30 was 506 miles against 497¾ in the previous twelve months. Notwithstanding the absence of special traffic such as that obtained in 1902 from the Zifteh Barrage works, which yielded £14,796, the gross receipts were £3,960 up at £132,791, or an average of £262 per mile. Coaching traffic showed a substantial improvement in both first and third class, the total number carried being 325,240 up at 3,636,688, and the receipts £11,217 more at £78,190; goods yielded £48,444 on 471,530 tons carried, compared with £48,502 and 463,928 tons in 1902, when 60,990 tons of special traffic bringing in £5,948 were carried for the Zifteh Barrage, but sundry receipts showed a decrease of £7,513, owing to a reduction of £8,048 in hire of rolling stock for the same works. Working expenses were £3,310 higher in consequence of the additional train mileage, and amounted to 62.12 per cent. of the gross receipts compared with 61.46 per cent. a year ago and 72.03 in 1901. Net revenue was consequently £650 up at £50,309, and with interest on investments, balance brought in, etc., the amount available came to £301 more at £53,539, of which fixed charges, including sinking fund for redemption of Delta and Est debentures took £24,945, leaving £28,594 to be dealt with. An interim dividend at the rate of 4 per cent. per annum was paid on the preference shares in June, and it is now proposed to make a further distribution at the same rate and to carry forward £2,554. Extensions of about 98 miles have been sanctioned by the Egyptian Government, and further extensions making about 125 miles in all are expected to be granted shortly. An issue of preference shares was made in April for the purposes of the new works, and the directors propose to make a further issue of debentures when the market is favourable. As the preference dividend was fixed at 5½ per cent., cumulative, arrears are being gradually piled up, and in connection with this the directors point out that the articles of association do not provide for the establishment of a sinking fund for the redemption of the share capital until all these arrears are cleared off. Under these circumstances it may be some years before this fund can be commenced, and the 10s. 9d. per cent. per annum specified will, owing to the delay, be insufficient to replace the capital within the life of the concession which is for 70 years from April, 1902, and it is therefore suggested that the articles of association should be modified to enable the sinking fund to be started at an early date.

Uruguay Northern Railway Company.

Excluding guarantee this company's receipts for the twelve months ended June 30 were £19,116, or £3,967 more than in 1901-2, but unfortunately the outlay advanced no less than £6,337 to £18,378, so that the net profit was a mere £738 compared with £3,108. This increase in expenditure was due in great measure

to the occurrence of exceptional floods in the early part of the present year, necessitating serious renewals and repairs to bridges and culverts. As with previous years, the Salade.o Nuevo Cuareim continues to be chiefly responsible for the improvement in gross receipts, and at this establishment 90,000 head of cattle were killed during the year under review, or 21,500 more than in the previous twelve months. Prospects for the coming season are described as encouraging. After deducting income-tax, the Government guarantee gave a net sum of £18,955, to which a.e added net revenue £738, balance brought forward £705, and trustees' fees for six years waived £300, making £20,698. Debenture interest at 3½ per cent. absorbs £14,828, and in addition the holders are entitled to two-thirds of the net profits, giving them another 2s. 2d. per cent. Then interest on 5 per cent. prior lien debenture stock takes a further sum of £1,464, and from the balance of £3,936 still remaining it is proposed to pay a dividend of 1 per cent. on the preferred stock, carrying forward £1,582. Capital expenditure for the year was £2,012, principally in respect of the payment for new wagons referred to in previous reports.

Western Australian Bank.

Notwithstanding the extension of the business by the opening up of new branches, the operations of this bank during the six months ended September 28 were on a smaller scale than for the corresponding period of 1902. Deposits not bearing interest were increased by £6,528 only to £1,062,589, and those bearing interest fell off by £279,528 to £608,843, or a net decrease on this item of £273,000. On the other hand specie and bullion amounted to £410,658 less at £791,623, and bil's receivable and other advances were £81,582 higher, at £1,108,883. The results, however, were substantially better, net profits, after making the usual provision for rebate on bills, bad and doubtful debts, management expenses, etc., showing an increase of £5,486, at the very satisfactory figure of £20,974, so that in spite of the balance brought forward being £8,232 smaller, at £8,565, the amount available of £29.539 was only £2,746 down and the directors again pay a dividend of 17s. 6d. per share or at the rate of 17½ per cent. per annum, and carry forward £20,789. In addition to these undivided profits a reserve fund of £250,000 has been built up in the past, while the pa'd-up capital is only £100,000. The chairman, however, announced at the meeting held in Perth (W.A.) that the board intended to make a further issue of shares shortly, and the careful management which has hitherto characterised the bank seems sufficient guarantee that the additional funds so raised will be well emp'oyed. Sir George Shenton spoke very hopefully of the prospects of the colony, although he admitted that the State expenditure on railways was far greater than it should be. The past season had been one of the best for years both for agricultu-al and pastoral purposes, the price of wool had kept up, and the timber industry was developing, while the gold output was gradually increas'ng, and settlement on the land continued, so that he hoped to see the realisation shortly of his wish that Western Aust-a'ia would soon be in a position to provide all that it required for home consumption, and a little later be able to export cereals and other agricultural products.

London and River Plate Bank.

The blazing prosperity of Argentina during the past year failed to bring additional profit to this b'g institution, which reports a revenue of £357,626 for the twe've months ended Septemb-r 30, or £1,980 less than in the preced ng year. Ba'ance b-ought forward was likewise a trifle smaller at £40,157, but there was a reduction of £5,123 in the general charges at £193,415, so that the net balance is somewhat larger at £204,368. Therefo-e the dividend will again be 18 per cent., with £5,000 to pension and ben-volent fund, and £37,3'8 carried forward. Current and deposit accounts fell away slightly to £15,520,507, and acceptances are also lower at £3,461,212. As usual the bank holds an enormous cash balance, no less than £8,418,302. exclusive of clearing banks' balances of £537,651. Bills receivable, discounted, etc., and advances are down £871,000 to £14,186 632, and bank premises are modestly valued at £205,003. Capital employed in South America does not require depreciation. A branch of the bank has been opened at Concordia, province of Entre Rios, Argen'ine Republic.

African Banking Corporation, Limited.

The profits of this institution con'inue to grow rapidly, the gross revenue for the six months ended September 30 being almost £14,000 more than in the corresponding period, which in turn showed a gain of £25,000 over 1901. Add'ng £9,013 brough't forward, the total for disposal is £123 525, but after meeting increased cha-ges of £71 070, rebate £18,476. and adding £2 000, or £500 more, to the staff guarantee and savings fund, the net balance is a mere £1,162 better at £31,443. So the reserve again receives £10.000 increasing it to £120,000, the dividend is repeated at 6 per cent. per annum, and the balance forward is increased by the additional profit to £9,443. Notes in circulation are slightly less at £175,907, but current and deposit accounts are nearly £400.000 larger, and now stand at the rather important to'al of £5,482,320. Coin, bullion, notes, and cash at bankers altogether come to £1,712,174, a very exce'lent amount rendered necessary because the bank's investments are decidedly small at £349,003. Bills of exchange purchased amount to £2.112,361, against £2,027,951, and bills discounted, loans and advances have risen £204,070 to £2,894,304.

Bleachers' Association, Limited.

Palmy days have not yet arrived for this great combine, and after the great feat accomplished in 1002 of beating prospectus estimates, it disappoints us much to find that profits have tumbled back for the six months to September 30 last. After charging a slightly larger sum of £82,329 for maintenance, upkeep, and depre.iation, and paying gene.al charges, and debenture int.rest, the net ba.ance is on.y £92,756, or £40,718 less than in the corresponding pe.iod of last year. So after adding £15,000 to rese.ve, and paying the preference dividend, there is only £27,713, against £62,728 to be carried forward, notwithstanding that the increased sum of £12,685 was brought in. Unless matters improve unhappy vendors will not next year receive another dividend of 3 per cent.

London Scottish American Trust, Limited.

The income for the twelve months ended October 31 again showed a shrinkage, and with £67 from premium on debenture stock sold came to £4,466 less at £66,548. Including the smaller balance of £2,270 brought in, the total was £4,795 down at £68,818, and as debenture interest, management expenses, etc., took £24,844, or £485 more, the amount available was reduced to £43,974 against £49,254 a year ago. By transferring £4,000 on.y to reserve, however, compared with £10,000, the directors are enabled again to pay 6 per cent. on the deferred stock, and carry forward £2,684. The usual valuation of the investments showed a depreciation on book values of £35,512, against which the reserves stand at £114,000. Although this depreciation is less than 3 per cent., the fact that there is a decrease in value combined with the steady falling off in revenue, renders it more imperative than ever that a full list of the securities held should be published. What real knowledge can be ga'he ed from the "abstract of investments" with which the shareholders are expected to be content? This shows that the holding in United States railway bonds has been increased by £70,036 to £463,293, and that in shares reduced by £5,860 to £84,264. Bonds of other Yankee undertakings are £3,015 up at £338,218. and shares down £3,234 to £214,766, while South American securities are £20,859 down at £73,704, Mexican securities £3,973 up at £50,906, other investments £17,989 and temporary loans £9,845 higher at £167,923 and £21,481 respectively, the total amounting to £1,414,558.

Lea Bridge, Leyton and Walthamstow Tramways Company.

Gross receipts for the twelve months ended October 31 amounted to £17,500, or an increase of £906, but working expenses came to £694 more at £14,450, so that the net revenue was only £212 higher at £3,050. With a smaller balance of £508 brought in and only £4 received from interest and transfer fees, the amount available was £3,562, against £3,619, and after meeting interest, directors' fees, etc., and writing off £238 for depreciation, the net balance was £2.852, out of which a dividend of 6 per cent. is again paid, leaving £452 to be carried forward. Referr ng to their report of a year ago, the directors state that the Leyton District Council has given notice of its intention to purchase the portion of the line in their district situated in the Lea Bridge Road, but that the Walthamstow Council, which intended to co-operate and had called the necessary meeting, did not pass the statutory resolution to enable it to carry out the purchase. The Leyton authorities, however, are proceeding with the matter, and have asked the London County Council to negotiate for the purchase of that portion of the line which is within the county in order to facilitate the completion of the transaction.

Great Eastern London Suburban Tramways and Omnibus Co., Limited.

The report issued for the year ended October 31 is of the usual meagre description, although the company contiuues to drift from bad to worse, and the position cries aloud for some explanation. Gross revenue showed a further decrease of £2,452 at £40,032, but in some way which the directors do not condescend to explain, a saving of £3,105 was effected in working expenses, although only £500 was taken from horse reserve acco-nt again t £2,000 a year ago, and the gross profit was consequently £6-3 higher at £3,321. With £273 brought in, the amount avail-ble came to £3,594, compared with £3,244, and after providing for directors' fees, preference dividend, etc., and writing off the trifling sum of £563 for depreciation, the ordinary shares again get 3 per cent. and £515 is carried forward. As recently as 1901 the dividend on the ordinary was 6 per cent., and in 1900 it amounted to 10 per cent., but those palmy days seem to have disappeared and the directors are shirking their duty when they fail to put before the shareholders any explanation of the persistent shrinkage.

Santa Fe Land Co., Limited.

Although the sensational looking increase in receipts of 1901-2 was not repeated in the twelve months ended June 30 last, the progress made was highly satisfactory, and it rea'ly seems as if the company can now claim to have definitely left the old days of adversity behind. The gross revenue from all sources was £2,874 higher at £43,856, and after meeting all expenses, including £5,203 for depreciation, against £6.645 written off a year ago, the net profits came to £23.988, or £3,242 more. To this was added £6,158 brought forward, making a disposab'e total of £30,146, compared with £23.814, and after transferring another £10,000 to reserve, the directors raise the dividend by a modest ¾ per cent. to 2 per cent., and carry forward the larger balance of £7,896. The board is untiring in its efforts to attract tenants to settle on the property, and as a consequence of the work done in the way of sinking wells, etc., the demand for land has improved, and it has been found possible to secure higher rents, while there has also been an increase in the amount of the sales. In the cattle branch, too, the results have been satisfactory, the number of calves marked during the year being 9 012, and the usual independent valuations made on June 30 showed a total of £68,459, but this item is carried in the balance-sheet at the actual

cost of £53,351. So far the capital requirements have been met out of revenue, but if the full benefit is to be derived from the property, further funds will be necessary, and the directors therefore propose to make an issue of bonds not exceeding £100,000, the proceeds of which will be used for building the railway into the Quebracho forests, for increasing and improving the cattle and for the general development of the company.

Ashley Gardens Properties.

This company's rent roll for the twelve months ended September 29, reached a sum of £32,878, and other income brought the entire revenue to £33,216. Total charges against this were £20,269, leaving the net balance at £12,947, from which debenture interest absorbed £4,462, premium on debenture and preference share redemption policies £417, and directors' fees £250. Sum remaining was £7,817, and the directors again declare dividends and bonus aggregating 8 per cent. on the ordinary shares, with £750 to reserve, and a slight increase of £32 to £2,737 in the amount carried forward. All the company's properties are leasehold, and they stand in the balance-sheet at their original figure of £210,000, but as will be gathered from the manner in which profits are allocated policies have been taken out for redeeming the debenture stock and preference shares. Reserve fund mounts slowly being now £7,250 after the company's existence reaching seven years, but it is all invested in good class stocks, and maybe when the leaseholds fall in the fund will be big enough to return the ordinary capital. Debtors largely exceed creditors and cash comes to £2,448.

Norwich and London Accident Assurance Association.

Net premiums for the year ended August 31, after deducting reassurances amounted to £195,290, or an increase of £23,365, and with interest on invested funds gave a total income of £205,374. Claims, including outstanding cases, absorbed £105,640, or £14,705 more, expenses and commissions took £58 932, or 30 per cent. of the premiums, and after setting aside 40 per cent. of the premiums to cover unexpired risks, £10,000 was added to general reserve. The net result of the operations was a balance of £33,837, out of which two dividends, making 18s. per share, have been paid. The association appears to be in a fairly comfortable position, as total funds now stand at £359,432, of which £71,654 is invested in British, Indian, and Colonial securities, £190,653 in railway and other securities, and £26,630 in mortgages.

INDIAN GOLD MINES.

New monthly records are becoming quite normal, and we now look forward to them as confidently as to new moons. The output of 51,559 oz. from the Indian gold mines is the highest in the history of the Colar field, exceeding the figure of October by 179 oz., and the corresponding month of last year by 3,227 oz. For the eleven months of the current year the aggregate yield is 543,802 oz., and is already 29,511 oz. more than the whole of the total of 1902. All the individual returns are excellent, especially that of the Champion Reef, though there is no need for any invidious comparison. The production from the Mysore West and Wynaad mine was affected by the interruption of stoping by water.

On and after Monday, 14th inst., the business of the National Bank of India, Limited, will be carried on at their new premises, 17, Bishopsgate Street Within, E.C.

Mr. Vincent Wodehouse Yorke has been appointed a director of the London and Westminster Bank, Limited, in succession to Mr. Ferdinand Marshall Huth, deceased.

The directors of the London, Edinburgh, and Glasgow Assurance Company have appointed Mr. George King, F.I.A., F.F.A., to be consulting actuary of the company.

A *Times* correspondent from Rangoon gives the estimated Burmese rice crop available for export as 2,556,000 tons, or 30 per cent. more than last season's report.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and December 5, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Dec. 5, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Dec. 6, 1902.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

A little fear was hinted at in some quarters lest the Bank rate should go up this week after all, but there was really no ground for alarm. Evidently the Bank authorities are doing their utmost to prevent any disturbance in the credit market so near the end of the year. Their action is in some respects commendable, and they are anyway the victim of circumstances. It is obvious from this week's Bank return that there is going to be a very acute strain upon the market during the next fortnight. Already money is being withdrawn from London to the provinces, and bankers have consequently been driven to call in loans from the market, thereby driving credit users to the Bank. They borrowed a little there yesterday and the market's debt has been modestly increased to-day owing to its being Stock Exchange pay day. The Bank both lent and discounted to-day, taking bills at 4 per cent. and lending at 4½ per cent., but the aggregate was not important. Yet the open market rate for seven day loans has been 3¼ per cent. all week until to-day when it rose to 3½ per cent., and the India Council has been able to get no more than 3½ per cent for loans to the end of the month. Call money has fluctuated between 2 and 4 per cent., rarely touching the highest of these quotations, but to-day it was 3½ to 4 per cent.

When the Bank rate was raised to 4 per cent. on September 3, the total stock of coin and bullion in both departments was £35,500,000. This week's return shows it to be down to £30,900,000, so that the loss since the rate was raised has been about £4,600,000, and the whole of the new gold coming into the open market from South Africa and other producing regions has in addition been taken for export. If the Indian Government had not obligingly sent forward sundry half-million consignments of sovereigns the nakedness of the land would have been patent to all and a 5 per cent. rate could not have been avoided. As it is the 4 per cent. rate has clearly been ineffectual against the numerous foreign demands upon our much reduced stock, and if important further depletions occur between now and the end of the year a 5 per cent. rate must come.

Such an outlook keeps the discount market on tenterhooks. The unreliable cheapness of short credits tempts dealers in bills to quote fine rates, and it has been impossible this week to hold the market up to anything like 4 per cent. as a working rate, but it is every other day subjected to a fresh spasm of apprehension under the pressure of which bill brokers struggle to get somewhere near that figure. Most of the business, however, in remitted paper has been done at from 3⅞ to 3 15-16 per cent., even in bills of sixty day usance, and six months' paper has frequently been taken at 3¾ and 3 13-16 per cent. We cannot regard this limpness as a healthy sign in present circumstances, but the market will become weaker instead of stronger should the New York exchange continue to advance. It has again recovered from the extreme depression of the early part of the week, and although still a long way from the point that would enable the Bank of England to successfully compete for the supplies of gold coming into the open market, it may reach a figure that will at least protect the Bank's much attenuated gold reserve. To-night the price of bullion in the open market was nominally quoted at 77s. 11¾d. per oz., after being 78s. 0½d. for the greater part of the week.

On Tuesday the market had to find the final instalment of the Transvaal guaranteed loan, whatever that may have amounted to, and did so without applying to the Bank, mainly because last week the Bank took back so much of its stock and let money out. This week it has taken back another £747,000 of its Government securities in the form perhaps of redeemed Pietersburg Railway bonds, and by help of this amount, together with £239,000 drawn off the Government balances, and £1,366,000 taken from the other deposits, it has been able to pay off £2,254,000 due to the Bank on other securities, and to suffer a reduction of £105,000 in the banking reserve now down to £20,992,000. Thanks to 500,000 sovereigns from India the withdrawals of bullion during the week, although heavy, have only resulted in a net reduction of £376,000 in the Bank's stock, notes to the amount of £272,000 having come back from the active circulation.

A proposal was made at the Bankers' Committee meeting this week in accordance with Mr. Tritton's suggestion, to the effect that the Clearing House should be empowered to make up every Wednesday night the aggregate of the bankers' balances in the Bank of England and publish the total. To this the objection was taken that said total would emphasise the insufficiency of the Bank reserve because it would often exceed the total cash and notes in the banking department. This, it was contended, might cause disquiet in the public mind. Nothing therefore came of the suggestion, but why cannot the banks individually publish every week simultaneously with the Clearing House return each its own total of cash in hand and at the Bank of England. This would kill "window dressing," and at the same time give no exact clue to the amount of bankers' balances at the Bank of England.

SILVER.

A slight recovery in quotations was brought about in the end of last week on expectations of Indian support, and although these hopes were not realised the market was held fairly steady for a time by the closing of accounts open for the fall. Holders, however, then lost heart owing to the general absence of business, and the continued abstention from buying on the part of the Indian Government, and the metal was offered freely from nearly all quarters with the result that prices fell sharply to 25d. per oz. for spot and 24 11-16d. per oz. for delivery two months forward. At these levels fresh support was forthcoming, not only from operators on this side, but also from the bazaars, which lifted values to 25 5-16d. and 25 1-16d. per oz. respectively. Even with this there was not much real strength until just at the last when the market looked firm on the belief that the Indian Government was about to commence or had actually started to buy again. Applications for the Rs.60,00,000 India Council drafts on Wednesday were once more entirely for bills and amounted to Rs.4,50,00,000. Tenders at 1s. 4 1-32d. received about 11 per cent. and above in full. Next week the amount offered will be again Rs.60,00,000.

Stock Market Notes and Comments.

If money remains about its present price well into the new year, it is by no means improbable that several campaigns for a rise in prices will be started. Much will depend upon the out-turn of the railway half-year. As far as gross traffic figures indicate there may not be much encouragement from that quarter to a prolonged "bull" campaign, but should railway chairmen at the half-yearly meetings be able to promise some measure of economy, a reduction in working expenses and increased harmony between them in the arrangement of traffic, it is by no means improbable that prices may sensibly improve. The account just concluded did not, however, indicate any material increase in the speculation open for the fall, and without a large "bear" account to give elasticity it is highly doubtful whether any inside effort to put prices up can effect much or last long. In all that relates to Stock Exchange movements we must never forget the poverty and apathy of the general public as well as the hunger inside the market. Losses have been so severe during the past four years that the appetite to gamble has been not only checked but almost destroyed among all classes of the public. At the same time the means to invest are lacking in all directions, hence we hardly see a "bull" campaign begun before it fizzles out. The recent endeavour of the houses controlling the Kaffir Circus to bring on a general upward movement there, based upon the imminent arrival of gangs of Chinese slaves, has been a mere abortion so far as the public is concerned. We had to point out last week that the "shop," as these sacred potentates of paper wealth are irreverently termed, were busy selling the shares they had bought earlier in the week or some time before, selling back to the market where they could. This shows that at least some of them are pretty near the end of their resources, and their unscrupulousness is so thorough that the market can be perfectly sure of being made the victim whenever it follows such leaders. And if it loses in the game how much more the public. That is the moral to be drawn, and the wise man who has some of the non-remunerative stuff on hand cannot do better than imitate the bosses, but by doing exactly the opposite. When the bosses buy the public should sell. That is the only way to bring common-sense into the management of South African mining, and to prevent the permanent injury of what might be, if managed with a reasonable degree of honesty, a profitable source of income for many years.

We still watch the Yankee market with a certain amount of fascination and no small amusement. On Wall Street also the gamble seems to be all professional with the public either looking on indifferent or looking the other way without a thought of the Stock Exchange and its prices. As long as the "bull or bear" by profession has all the play to himself no great harm can be done, and we wish them joy of the fun. They are only scalping each other, and in the long run both scalper and scalped are likely to get into the bankruptcy court. We see that seats in the New York Stock Exchange are rising in price with every successive purchase, but that does not quite imply that the business now being done there is growing in profit to the members, or that the bottomless pits of financial insolvency, the product of morally emancipated combine manufacturers and monopoly builders, have been filled up with solid material. Everything continues to be paper on Wall Street, even more than in London, and the expedients necessary to maintain a show of genuine strength when all is hollow within must often be of the wildest description. How many of the New York banks have had to get help from the Clearing House during the year now near an end? How many of the securities carried by these institutions, by the insurance offices and trust companies, remain unwritten down to current values? We may never know, and on the other hand a catastrophe might throw a vivid light upon the facts any week. Wall Street has a "long row to hoe," to change the metaphor and speak in Yankee language, before it gets out of its present troubles, and we who also have troubles enough and to spare can extend to it our sympathy. Cash happily we have none to spare for a gamble.

The Week's Stock Markets.

Stock markets continue in a very nervous and sensitive condition, and during the past week were alternately frightened or calmed by the news cabled over concerning the position in the Far East. There was never much business going on of any sort, not even professional, but the political news on Wednesday seemed very reassuring, and prices were advanced with considerable uniformity. Peace between Russia and Japan was said to be absolutely assured, and we got so many details of the reported settlement that dealers became quite cheerful, and made up their minds for a pleasant week end. The happiness, however, was distressingly short-lived, for next day came the startling announcement that eight Russian ships of war had been sent to Korean waters in order to coerce that country into obedience to Russia's demands. Prices, accordingly, at once went decidedly flat again. Nothing has since occurred to remove the fears that the two powers may yet come to blows, and markets will probably remain in a state of suspended animation until something really authentic is known. Not that any particular activity is to be looked for, even if peaceful official news at once comes along, because one of the dreaded 19-day accounts, broken by the Christmas holidays, is now with us, and jobbers will have to reserve all their energies for the new year, in the hope that the long deferred boom may then begin. The fortnightly settlement concluded to-day went through

comfortably enough, with bankers' charges as before at 4½ per cent., and contango rates a little stiffer, owing to the increased length of the account.

Consols commenced badly on the political fears, and fell away further on reports that very large sums in gold were to leave the Bank of England for America. The latter, however, proved only partially correct, and on Wednesday the premier security led the general market response to the more comforting news from the East, the account price being hoisted to 89⅛. There was a sharp set back from this level to 88¾, but another favourable reaction occurred before the end, and quotations finish a mere ⅛ lower on the week, at 88 11-16 to 88 13-16 for money and 88 15-16 to 89 1-16 for the January account. Transvaal scrip, which is now fully paid, to the intense relief of all concerned, kept pretty steady, and after advancing to 98⅜ closes unaltered at 98. Khaki stock fell to 97. Childers 2½ per cent. lost ¼, and all India sterling loans receded ½. Bank stock recovered part of an early loss of 2. Amongst Home County and Corporation issues, Croydon 3½ per cent. closed 1 lower, on the announcement that the Corporation has placed a loan of £200,000, bearing 4 per cent. interest for five years, and convertible into 3 per cent., at about 93 per cent. Bristol and Metropolitan 3½ per cent. also gave way 1, together with the 3 per cent. Metropolitan, London County and Chichester issues. Colonials very rarely moved, and we have only to record a loss of 1 in Canada 2½ per cent., and a gain of a similar amount in New South Wales 3½ per cent. The public response to the Johannesburg loan was poor, only 36 per cent. being applied for, and the unfortunate underwriters are thus landed with 64 per cent. This will cause the quotation for the stock to be weak for a long time, and it closes to-night at 1 discount on the issue price of 95.

Apart from the rather wide fluctuations in Japanese issues, the Foreign bond market has been exceedingly uninteresting, and business was much interfered with by the interruption to telephonic communication with Paris. Japanese securities started rather weak, but then went ahead sharply on the favourable rumours, only to suffer a considerable reaction almost immediately. Before the close, however, there was another bound upwards, and final figures disclose improvements of 1½ to 2. One or two Chinese gold loans were supported with the 1898 gold and Imperial Railway issues in most request. Continental securities displayed no particular tendency, and alterations were generally unimportant. Chief movements occurred in Spanish "sealed" bonds, which lost the best part of a pound, owing to the disturbed state of the country's internal politics. Later there was a slight rally, and final figures show a loss of ½. Hungarian Rente, one or two Greeks, Italian 4 per cent., Egyptian Unified, German 3 per cent., and Portuguese slightly improved or kept steady, but Russian Railway bonds dropped 1. Much less play occurred in the South American Division, and after very trifling movements either way prices close much as before. Contango rates were a little stiffer here and there owing to the increased length of the account, and it cost 4½ per cent. to carry over Portuguese, Greeks and Turks. Spanish were continued at 3 to 4 per cent., but Italians were scarce as usual, and the charge rarely went beyond 1½ per cent. Argentines, Brazilians, Chilians, and Mexicans were all done at 4½ per cent., and Uruguays at 4 per cent., despite the considerable speculation for the rise recently going forward in the latter. Making up prices showed some rather important movements, most of them favourable. Uruguay 5 per cent and 3½ per cent. advanced 2¾ and 1½ within the fortnight, Argentines were up ¼ to 2¾, and Brazilians and Chilians ½ to 2½. Japanese bonds moved favourably to the extent of 1¾ for the old fives and ¾ for the new and the fours, while Chinese rose anything up to 2⅛. European issues displayed some irregularity, Spanish being down ¾, Egyptian Unified 1¼, Servians 1, and Bulgarian ½, but Turkish Unified was 1⅜ better. Portuguese advanced 1, German 3 per cent. ⅝, and Greeks ¼ to ¾.

Continuation rates on Home Railway ordinary stocks were rather higher than might have been expected with a large inside account open for the fall, but money cost as a rule 5 to 6 per cent., and on North-Eastern, Great Western, South-Western ordinary and deferred, and Midland issues contangos were as high as 7 to 9 per cent. Making up prices on Wednesday revealed a fair number of changes in favour of the bears, North-Western being 4 down, North-Eastern 3, Lancashire and Yorkshire 2½, Brighton ordinary 2, and Midland preferred 1¾ lower, and Great Western, South-Western ordinary and preferred, South-Eastern ordinary, and Brighton deferred having fallen 1 to 1½. City and South London also lost 2½. Against these, however, must be placed gains of 2½ in Metropolitan, 5 in District, 2 in Chatham preference, and ¾ in South-Eastern deferred. Business this week has

been on very modest lines, and the market was therefore all the more easily influenced by adverse circumstances, of which there have been several, ranging from the wet weather to the Board of Trade figures. North-Western and Brighton preferred each fell 1, but a rally just at the end caused general issues to recover early losses. Dover "A" improved on an unexpectedly good traffic return, and further advanced on the official announcement that the Hamburg-American line intends to call at Dover, finishing with a gain of 1½. Great Eastern, Midland deferred, and Great Western put on ½, and Great Central and Great Northern deferred each rose ¼. Amongst Underground issues, Metropolitan and District relapsed ½, but Central London ordinary recovered 1.

Canadian Pacific shares were supported from Wall Street in the beginning of the week and the price advanced sharply, but the improvement did not last very long, and in the end they were only ¼ higher. The prospectus of the new debenture issue was issued on Wednesday, but had no appreciable effect. Grand Trunk stocks on the other hand were inclined to sag at first but gradually hardened. They eased off again just at the close on a traffic return below market forecasts and finished much as before. Money on these stocks cost from 4 to 6 per cent. with a tendency towards the lower figure, as the arrangement of the account proceeded. Canadian Pacific fell 2⅜ during the fortnight and Grand Trunk third preference stock 1⅝, but otherwise the movements were fractional.

The market for American Railroad shares was not disposed to do much just at first, as neither the New York Associated Banks' return nor the course of prices in Wall Street on Saturday was calculated to inspire confidence. Operators plucked up sufficient courage to advance quotations slightly over parity, but the movement bringing out sellers they quickly relapsed and remained heavy for the rest of the day. New York, however, then engineered another rise on Secretary Shaw's speech and the engagement of more gold on this side, and Tuesday saw a rush of "bears" to cover, owing to the nearness of the settlement, with the result that there was quite a burst of activity which more than wiped out the earlier losses. The usual relapse and rally followed each other in due course, and by Thursday the market had settled down into its old listless state. With the exception of Erie first preference, which lost 1, the declines on the week were trifling and rarely exceeded ½, while on the other hand gains were recorded of 1½ in Erie ordinary, and 2 in Denver preferred, while New York Central and Union Pacific common each rose 1. The account open for the fall in this section has been very much reduced, but carrying over rates were still fairly easy at 4 to 5 per cent. Movements during the account were mostly favourable and included a large number of substantial improvements. Atchison ordinary and preferred advanced 3¼ and 2¾, Baltimore ordinary 3½, Chesapeake 2¾, Milwaukee 5, and Louisville 4¼. Denver ordinary and preference rose 1¾ and 3¼, Erie ordinary 1¾, Norfolk issues 4 and 2, and Pennsylvania and Reading ordinary 2¼ each. Southern common and preference were 2¾ and 4 higher, Union Pacific common 5½ better, and Illinois Central, New York Central and Ontario 1½ up.

Argentine Railway securities fell away a little on closing of accounts before the settlement, but the declines were not allowed to go far, and prices were once more pushed up vigorously on Tuesday. They weakened again on the following day as traffic returns were less glowing than the market has been accustomed to, but even then advances predominated in the list. Rosario ordinary and deferred continue the chief favourites, but the former, in spite of the large business recorded daily, closed unchanged, and the deferred was only 1 up. Buenos Ayres and Pacific ordinary rose 4, the first preference 2 and the seconds 3, Bahia Blanca and North-Western preferred put on 4, Villa Maria and Rufino second debenture stock 2 and Argentine Great-Western first debenture, Buenos Ayres Great Southern ordinary, Buenos Ayres Western, and one or two more improved 1. Argentine North-Eastern ordinary debenture stock however, fell 1. Midland Uruguay debenture stock gained 3, United Railways of the Havana preference and consolidated debenture stocks 3, and Cucuta debentures 2½. Mexican Southern ordinary also rose 3, but Mexican Railway ordinary and first preference fell ¼ and ½, and Interoceanic of Mexico second and "B" debenture stocks declined 1 and 2. Money on Foreign Railways, where there was any account open, was dear, and cost from 6 to 8 per cent., with most of the business at the higher figure.

Miscellaneous markets again provided few important incidents, and business showed no signs of expansion. Several American brewery securities received a little atten-

tion as the result of improved prospects disclosed by recent reports, and modest gains have been recorded. Home concerns were dull and lifeless. The shares of the Associated Cement Manufacturers were run up on reports that the English, German and Belgian manufacturers have entered into an agreement by means of which competition will be considerably reduced, but prices did not close quite at the top. Hudson's Bays could not retain last week's big improvement and closed ½ lower at 38. Gas Lights advanced 1 and Welsbachs continued to find a few purchasers. Oil shares were again wanted, and so were Textile securities and Iron and Steel shares. Meat and Catering things likewise showed an improving tendency, but Sweetmeats, after a fractional rise, became dull, and finish unaltered. Telephone deferred jumped 2, while Telegraph stocks were inclined to ease off. There is no pause in the fall in Waterworks stocks and another long list of declines has to be recorded. West Middlesex and Southwark and Vauxhall ordinary dropped 5, New River "B" debentures 4, the "C" and "D" debentures 2½ each, and the "A" debentures 1. East London 4½ per cent. and Kent 4½ per cent. and 3 per cent. debentures receded 3 and East London 3 per cent. 2, while Grand Junction debentures dropped 5, and the two Lambeth debentures 2 and 5. Southwark and Vauxhall inter-communication debentures gave way 2, and the "A" and "B" issues 3 and 4, and Grand Junction "A" fell 1. United States Steels managed to pick up a little at the commencement of the week, but soon relapsed and closed 1 lower for the common and ¼ easier for the preferred. Rates at the carry-over on Wednesday showed little variation and everything was easily arranged.

This was a "peace" day on the Stock Exchange, and Berlin sent buying orders for Japanese bonds, which helped to cause a jump of 2 in the 4 per cent.'s. Some people seem to be making a good thing of the delay in settling the Russo-Japanese dispute, but the effect upon markets generally continues disastrous, and business grows, if possible, more insignificant every week. The public will not buy anything. Even the Canadian Pacific debenture issue was dealt in to-day at 1 discount, and the Johannesburg loan is also 1 discount.

MINING NOTES AND NEWS.

We have nothing of an exciting description this week, the environment has been very quiet and peaceful, if we except the Far East. Professionals have been in a way busy with the settlement. Tuesday was contango day in the mining market, and the current account is one of the dreaded nineteen-day affairs, with the Christmas holidays inside it. For that and other reasons share-pushers are not hopeful of any revival of business until a New Year has arrived. Nor can they feel assured that even then the public will come trooping in.

Rates on Tuesday were, on the whole, inclined to be a little stiffer than those charged at the end-November settlement, but the changes were too insignificant to be of any importance. On such things as Rand Mines, East Rands, and Modderfonteins 5½ to 6⅝ per cent. was the figure, whilst the general contango was 6 to 7 per cent. On diamond shares the rate was lighter—4 to 5 per cent. on De Beers and 3⅜ to 4½ per cent. on Jagers. On Rhodesian specialities there was no alteration, the figure being 6 to 8 per cent., but the charge on Chartered went up by about ½d. per share. Both in the West African and Egyptian sections 7 to 9 per cent. ruled, but amongst Westralians Golden Horseshoes were done at 4 to 6 per cent., Kalgurlis at 8 to 10 per cent., some at 6 to 8 per cent., and one or two a little higher. The Kaffir making-up list revealed a number of small gains, as well as one or two large ones, such as ¾ in Wemmer, ⅝ in Pigg's Peak, 9-16 in De Beers deferred, 7-16 in Rice Hamiltons, 5-16 in Robinson Randfontein, and ¼ in Jumpers, Jumpers Deep, Jupiters, Lace Diamond, Meyer and Charlton, Rietfontein A, Roodepoort Central Deep, and Violets. Against these were many falls, the principal being 5-16 in Glen Deep, ¼ in H. E. Props., Treasury, Daggafontein, East Rand Gold Mines, and Ferreira. Westralians were likewise a trifle higher on the fortnight, mostly minute fractions, with the exception of a gain of ⅞ in Kalgurli. In the West African list Ashanti Goldfields were conspicuous with an advance of 1⅜, and there were gains of 7-16 in Amalgamated, ⅜ in Bibiani, ¾ in Akrokerri, and 7-32 in Abbontiakoon. In the miscellaneous list the outstanding movement was the advance of 1⅞ in Rio Tintos.

For the new account Kaffirs display a trifle more steadiness, but business continues on the most meagre scale, and the public still stand aside. There is no evidence of support from the mine bosses and no exuberant joy has been manifested on the declaration of dividends of 25 per cent. by the Meyer and Charlton, 15 per cent. by the Roodepoort United Main Reef Company, 10 per cent. by the City and Suburban, 25 per cent. by the Jubilee Company, and 10 per cent. by the Lancaster West Company, and 5 per cent. by the Nigel Company. Hopes are said to have revived amongst the punters now that the Legislative Council is sitting, but they have been agitated a great deal by conflicting reports as to the attitude the Chinese Government intend to take up on the labour question. It has been declared that they will oppose the importation of coolies, but this has subsequently been denied. In fact, it is now declared the Government will offer no opposition. Again, Mr. Tyhurst's speech at the meeting of the Robinson Bank—this gentleman presided in the absence through indisposition of Mr. Robinson—in which he foreshadowed a "startling deficiency" of labour on the Rand in the immediate future, did not help to soothe the nerves of the market. On the other hand, a little gladness has been exhibited over the answer given by Sir Arthur Lawley to the deputation asking for a referendum before legislation was passed, he declining to accede to such request. The members of the Johannesburg Stock Exchange have passed a resolution urging on the Government to enact without any delay legislation authorising the importation of indentured coloured labour, whilst Sir George Farrar has given notice of motion drawing the attention of the Government to the report of the Labour Commission. It is likewise said large petitions are being prepared and meetings held in various parts of the country in favour of Chinese labour.

Late on Thursday the output of the Rand for November was published, amounting to 272,107 oz., whilst the outside districts contributed 7,706 oz., making a total of 279,813 oz., valued at £1,188,571. This compares with 284,544 oz., valued at £1,208,669 for October, a decrease of 4,731 oz., and £20,098 respectively. The net gain in the labour supply was 353, against 492 "boys," for the preceding month.

As for the other sections of the mining market, they have been uninteresting all the week. No outside business has been done in any of them, and scarcely any even by the professionals, so through lack of support from any quarter prices have drooped. This applies to Westralians, West Africans, Egyptians, and miscellaneous shares, the one conspicuous exception being Rio Tintos, which have been steadily advancing, in response to the usual manipulative tactics of those in the background.

Oceana Consolidated Company.—Last year dividends and interest brought in the sum of £35,625, profit on sales and investments realised £22,270, and transfer fees gave £977, making a gross revenue of £59,872, the net profit amounting to £41,393, after allowing for outgo and depreciation. To this has to be added the old balance of £61,765, making £103,157. No dividend is recommended, as the directors "are of opinion that owing to the improving outlook in South Africa the financial resources of the company should be reserved for the increasing business which is now confidently expected." Sundry creditors appear for £7,978, bills payable amount to £3,500, and contingent liabilities aggregate £77,172, but they are amply covered by the company's goodly exhibit of assets, thanks to the proceeds of the harvest of premiums gathered in from the issue of 150,000 shares.

Sheba Gold Mining Company.—Another poor report is issued by this company for the twelve months to September 30. Readers of this Review will probably call to mind that a few months ago we drew attention to rumours of reconstruction, which were subsequently denied in an official circular. The gold produced from all sources was 23,815 oz. of bullion, realising £91,881, after deduction of charges, and a further loss of £21,527 is shown in the accounts, which increases the debit balance to £70,062. This would have been larger had any provision been made for depreciation, but no sums have been written off, the directors remarking that in view of the fact that operations during the greater part of the year were on a small scale, and that all the plant and machinery have been kept in good working order, they have not made any allowance for depreciation in the accounts. "The shareholders are aware," they add, "that in past years liberal amounts have been deducted." They lament the shortage of labour, to which they attribute many of their troubles. The financial position of the company is a very weak one, and it is not easy to see how eventual reconstruction can be avoided.

Boksburg Gold Mines.—It is with much sorrow we learn that, with the exception of the completion of a borehole known as No. 10, no further work has been done on this company's property during the twelve months to July 31. This is attributed, of course, to the accursed scarcity of labour, and until a plentiful supply is forthcoming the directors "cannot recommend a resumption of active operations, as the risk of work being only intermittent is too great, resulting in an absorption of working capital without satisfactory progress." They actually dispensed with the services of the manager in the early part of the present year, and placed a caretaker in charge of the property, in order to reduce expenses to a minimum. The only income was £1,170 in interest, whilst the total outgoings amounted to £9,671, showing a loss of £8,501, which increases the debit balance to £59,031. Current liabilities are moderate, and the company possesses a goodly sum in cash.

Ayrshire Gold Mine and Lomagunda Railway Company.—This Rhodesian company is not yet in a position advanced enough to publish a profit and loss account, but progress appears to be steadily made towards gold production. The directors have arranged for the railway to be worked by the Mashonaland Railway Company, which took over the line in October, 1902, the report and accounts covering the twelve months ending June 30, when the railway made a working profit of £1,813. Accompanying the directorial document are reports from Mr. H. E. Jones, the consulting engineer, and Mr. E. D. Berrington, the mine manager, who state that the development is now about a year ahead of the mill, the quantity of ore developed being 101,160 tons. By July of next year, the date when the consulting engineer anticipates crushing will commence, the development will be two years ahead of the mill. The delay in the development work is attributed to the scarcity of native labour. Interest on loans and deposit and transfer fees brought in the small sum of £221, the London expenditure exceeding this by £5,412. At the end of June the company possessed £20,088 in cash, with £2,318 owing to it, but the total of these is much below the aggregate of the floating liabilities—£40,000, with a debenture debt of £250,000. However, the directors remove all occasion for suspense and anxiety by intimating they propose to issue the 150,000 shares to be created, at an early date, to repay advances, and to complete the equipment of the mine. Who will take these shares up, we wonder?

Gatling Hill Gold Mining Company.—We may remind our readers that this Rhodesian company had to abandon as practically worthless the property it originally acquired, as nature, in one of her nasty moods, took away right from before the eyes of the directors the reef that was to make the fortunes of all. Another twelve months have passed by and in the report issued this week we learn that the directors have let the mine on tribute on the basis of receiving 25 per cent. of the gross output. Shortly afterwards they were approached by the Etna Development Company with an offer of 15,000 fully paid £1 shares for the whole of the Gatling Hill Company's properties, provided the latter concern subscribed for not less than 15,000 shares at par. This offer has been accepted, and shareholders are informed that the Etna Development has a nominal capital of £250,000, and has been formed to acquire and develop 904 mining claims in the Lomagunda, Mazoe, Hartley, Salisbury, Belingwe, and Gwelo districts. The chairman of the Gatling Hill, Mr. Hans Sauer, is the chairman of the Etna, so there is something of a family arrangement about it. In the twelve months to the end of June the company received £208 from interest and £24 from transfer fees, and made a loss of £466, which has to be added to the old loss of £2,615, making £3,082. It has £4,000 on loan, and cash just about covers liabilities. But there are those Etna shares to be subscribed for, and the necessary cash will have to be found by those shareholders willing to part.

Gaika Gold Mining Company.—This is another Rhodesian company, whose directors have issued a report from the pen of Mr. H. Ewer Jones, the consulting engineer, who states that several reefs exist in the mine, but the backbone of the property will be the main reef, described as "an enormous mass of ore consistently auriferous over a length of 3,000 ft." Mr. Jones then delivers himself of geological theories respecting the origin of this reef, but these are of interest only to technical men, shareholders are more directly concerned in its probable commercial value. On the latter point Mr. Jones holds out some hope, when he says:—"In most cases where the ancient workings have been bottomed by shafts, payable ore, and in some cases extremely rich ore has been found. It is not, of course, expected that high grade ore will exist along the full length of 3,000 ft.; in fact, it has already been shown that one poor zone is there. Allowing, however, for this, and even assuming that the pay ore will exist only along half the length," and taking the assay value at 15 dwts. and the width at 7 ft., "it is evident that the property is valuable

and one which there is every reason to expect will develop into a big mine."

Selukwe Columbia Gold Mine.—This is a company that is piling wealth upon wealth, the additional revenue during the year ending June 30 being 42d. from transfer fees, or as much as 168 farthings. The expenditure, however, exceeded this by £1,849, so this loss has to be added to the old loss of £2,330, making an accumulation of £4,179. Liabilities are on the same colossal scale, for they aggregate no less than £34,155, the company having £1,944 in cash, and £1,117 in debts to meet them, a state of things that ought to rejoice the hearts of the shareholders, for there are any number of shares unissued.

Great Lucknow Consols.—Horatio, the magnanimous, has not favoured us with a copy of a report he and his co-directors have issued to the shareholders. We took the trouble to call at the palatial and gorgeous offices of the concern, where even the commissionaire has a luxurious corner and every comfort all to himself, with a softly-shaded electric lamp lest he should injure his eyes—he was deep in a newspaper at the time, perhaps the new Chamberlainite *Sun*—and asked for a copy of the document in our softest and politest manner. "Are you a shareholder, sir?" asked the clerk, with a deferential smile, which we hardly knew whether to take as a compliment, or otherwise; whether we looked one of the fool-and-his-money-soon-parted variety, or had the air about us of a lordly millionaire. The smile, however, fled instantaneously when we introduced ourselves as The Investors' Review, and the clerk looked a little perturbed. He went to an adjoining room, evidently to interview some official—it may have been the illustrious Horatio himself—and returned with the message that only one or two copies were left, that just sufficient had been printed to send out to the shareholders. Perhaps Horatio intends to economise here, to save a shilling or two in printing, out of his millions; or, perhaps, it was because they have some ill-feeling at that office against this Review, for we can easily imagine the official giving to the clerk some such answer as:—"Investors' Review! That——. No, tell him we've got none—none to spare." However, we don't feel hurt; it's not the first time the word-spinning Horatio has felt unhappy about us, and we hope it will not be the last. Nevertheless, we have seen the report, and a lengthy, technical one it is, giving no end of details as to what is being done in this winze and what the other level is showing. As regards the financial results, we are told that after crediting the proceeds of gold won, the total balance to September 1 last standing to the debit of the working account of the mine, was £6 444, which covers the cost of all development to date. This item has, upon the advice of the auditor, been placed to a suspense account, to be wiped out from the proceeds of future gold returns. Up to the present the whole of the financial business of the company has been carried out through the Associated Financial Corporation, which, in addition to providing all the cash for the purchase of the property and the incorporation of the company, has advanced the sum of £5,232. This item, however, is, in due course, to be adjusted by the allotment of shares to the Corporation, "under the arrangement whereby it provides the necessary working capital for the company's business." How do the shareholders in the Financial Corporation like this arrangement—paper instead of cash? If they're willing to have their debts liquidated in this manner, it's all right, the risk is theirs.

London and Western Australian Exploration Company.—In the report of this company for the year to the end of August we are reminded of the distressing fact that "abnormal conditions of stagnation and depression have prevailed during the whole of that period, not only in all the mining markets, but in financial matters generally," and the directors give it as their opinion, well-founded as it is, that "the enormous expenditure incurred by the nation during the late war has been, and is still being, felt in almost every branch of trade, commerce, and finance, and most severely of all in the class of business carried on by this and similar companies." Notwithstanding these misfortunes the directors are not without hope that the shareholders will consider the results satisfactory. What is more, they "look forward with confidence to the future," this optimism being based mainly upon the improved mining prospects of Western Australia generally. The cash profit realised on the sale of shares was £18,036, dividends on investments yielded £6.085, interest £2 163, smaller receipts bringing the gross revenue to £26,440. The profit and loss account is debited with the sum of £5.761 spent on properties abandoned, and after allowing for other outgo a profit of £11,716 is shown, which is carried to a reserve account for possible loss, the balance-sheet still being weighted with an old debit of £46,210. Cash totals £9 604, and the company has £46,980 out on loan, in addition to £28.653 owing by sundry debtors. Shares and debentures in various companies are valued at £150,061, it being stated this is the directors' valuation. Current liabilities are very moderate.

East Murchison United.—The report and accounts of this Westralian Company cover a period of one year and nine months from December, 1901, to August, 1903, during which time 28,797 oz. were recovered, realising £103,540, whilst the directors have taken credit for 3,771 oz. in transit, valued at £14,461. There was likewise a profit of £4,462 made on the treatment of ore from the Waroonga South mine. £1,269 coming from sundry receipts, and smaller sums from other sources. As the profit and loss account is debited with £50.895 written off machinery, plant, buildings, tramways and other fixed assets, and £28.851, the latter being the amount spent on mine development, a debit of £55,086 is shown, and deducting from this the credit brought in, the small sum of £99 appears on the wrong side of the balance-sheet. The company is poorly off for liquid resources against £33,050 owing to sundry creditors and £19,680 to the bank on the security of the properties and plant. And prospects are decidedly uncertain and speculative, for it is reported that whilst the results of development work at some points have been discouraging, at others they have been quite encouraging. The general managers, Messrs. Bewick, Moreing and Co., express the opinion that, taking the general position of the company's properties at the date of the balance-sheet, a slight improvement is shown as compared with their previous report. So, it is to be feared, the shareholders must wait very patiently for profits and dividends, should the company be fortunate enough to earn them.

Amana (Wentworth) Gold Mining Company.—We thought this company was long since dead and buried, and are now amazed—and doubtless existing shareholders have been equally amazed—to find it actually living. They have received a report which covers a period of five years ending September 30, and the extraordinary excuse is offered that the delay is due to the wish of the directors to arrive at some profitable arrangement with the Wentworth Proprietary Company, in regard to the 50,000 vendors' shares. In 1898 the directors submitted the accounts for the three years from the shutting down of the mine in 1895, so their tardy habits seem chronic. As the liquidator of the Wentworth Company refused to carry out the arrangement which the Wentworth directors had made with the Amana Company, these 50,000 shares, respecting which such a great fuss is made, have been purchased by a concern which calls itself the Fantani Syndicate, in which the Amana has acquired a controlling interest. Attempts to develop the property on a royalty basis having proved unsuccessful, the machinery has been sold and the lease finally disposed of. A profit of £8 007 has been made by investments and realisations and investments still in hand appear in the balance sheet at cost at £9.587. On these, however, there is a depreciation of £3,458, "for which sum a reserve has been created." Here, then, is evidence of prodigious labour, for which the directors have remunerated themselves to the extent of £2,295 in the five years. The whole concern should be wound up, but we doubt that this course will be recommended by the directors, so long, at any rate, as there are fees to be drawn.

Ashanti Goldfields Corporation.—This, one of the most important and flourishing of the Jurgle companies, won considerably more bullion in the year to the end of June than in the previous twelve months, the net value of it increasing from £26,858 to £115,834. Some 31,050 tons were crushed for a yield of 43,305 oz. Interest, dividends, and agency commission yielded £13,941, transfer fees £161, and rents £50, making a gross income of £129,986. Deducting expenditure and debiting the profit and loss account with only £654, written off premises and office furniture, the net profit is returned at £45,926. The directors continue the policy to which, it will be remembered, we took exception last year, namely, charging against the premium account sums written off mine development and works and buildings. A further £57,831 has been appropriated this past year, reducing the premium account to £226 366, thus helping to give a fictitious appearance of financial prosperity. Premiums cannot last for ever, and when in due time it becomes necessary to charge revenue with these items, profits will suffer and dividends also. The 5s. dividend absorbs £38,750, leaving a balance of £16,381. A fine balance-sheet is thus exhibited, the whole of the expenditure on mine development and works and buildings being written off, and the company possessing a goodly array of fingerable assets. Another subsidiary has been floated during the year, called the Ashanti Goldfields Auxiliary, the parent company receiving £25,000 in cash and 160,000 fully-paid shares for the concession it sold.

Bibiani Gold Fields.—The report of this West African company is certainly one of the best we have read for a considerable time past. Development work in the mine has been steadily carried on for the past twelve month, and reefs have been opened up in one or two levels for some distances. The Tremain mills have been continuously employed in testing the value of the ore, the total quantity mined and milled since the commencement being 10,000 tons, of an average assay value of 1 oz. 1 dwt. 17 grs., from which 6,193 oz. of fine gold, of the value of £26.042, have been recovered over the plates. The tailings, which have been stacked for future treatment, are, on the basis of the assays given, of the estimated value of £15,000. According to the mine manager the reserves of ore are sufficient to supply the new 40-stamp mill for four years, whilst every month is adding to the quantity. No profit and loss account is yet issued, but a good balance-sheet is exhibited. Against the premiums received on shares and debentures the directors have written the following sums off expenditure:—Mines and mining rights, being expenses in connection with the Concessions Court and expeditions to the coast, £9 702; preliminary expenses £1,640, and expenditure in London since the incorporation of the company £14.932.

Cape Copper Co., Limited.—A year has brought about a remarkable change for the better in the position of this company, for it seems to have completely recovered from the troubles and trials that beset it—many of them the results of the Boer war—in 1901-1902. Copper ores and metal realised the sum of £165,773, the profit on the railway was £11,701, £8.634 was received from the Briton Ferry Chemical Company, and £1,285 came from rents, interest and discount yielded £2,433, and the credit on Tilt Cove Account was £910. Thus a small loss is now changed into a substantial profit of £101,585, including £5,606 brought from the previous accounts. Out of this £10,094 has been paid in income-tax, and £22,312 in dividends, leaving a balance of £69,178, the directors now declaring final dividends of 1s. 9d. per share on the preference shares, and 4s. on the ordinary shares, payable January 1. It was not until February last that the work of restoration was sufficiently completed to enable smelting operations to be resumed at Nabakeep, so that the past financial year has only benefited by the output from the latter mine of two

and a-half months. At Ookiep the visible underground reserves are estimated at 9,772 tons, compared with 9,024 tons. Notwithstanding a considerable amount of exploratory work, nothing of value has been discovered in the lower levels of the mine, and these have been discontinued, not by any means pleasant news. At Nabakeep the prospects have improved. As usual, an excellent balance-sheet is issued.

Champion Reef Gold Mining Company.—This great Indian company continues to make headway, and another excellent report is issued for the financial year to the end of September. There were crushed 173,629 tons, an increase of 39,541 tons, whilst the quantity of tailings treated was more than double that of the preceding year, that is, 246,300 tons against 115,411 tons. In the mills 174,115 oz. of bar gold were extracted, and 32,335 oz. were recovered from the tailings, the total realising £782,757, exceeding the previous year's results by 55,705 oz. and £211,052. On working the profit amounted to £441,341, an increase of £153,049. To this is added the balance of £697, out of which two interim dividends of 4s. 6d. and 5s. 6d. per share respectively, have been distributed, absorbing £236,500, £14,187 has been paid in income-tax, £9,320 written off machinery and plant, £5,000 off part of the expenditure on Tennant's shaft, sundry items taking £7,107. Out of the balance of £169,924, the directors recommend that the sum of £168,332 be applied to the payment of a final dividend for the year of 6s. 6d. per share on the fully-paid and 4s. 4d. per share on the partly-paid shares, leaving £1,592 to be carried forward. This works out at 165 per cent. per annum aginst 105 per cent. The directors report a further substantial reduction in the working costs in the three principal departments of mining, milling, and cyanide. Developments have revealed a continuance of highly auriferous ore in the deeper workings throughout the mine, and in places massive bodies of quartz are exposed, whilst the reserves of ore now stand at 366,000 tons, or 121,000 tons more than a year ago. The balance-sheet discloses a strong financial position.

El Oro Mining and Railway Company.—In a circular announcing the declaration of a dividend of 9d. per share, the directors say the actual profits for the four months to the end of October, notwithstanding the increased cost of operations, amount to £57,800, which they have no doubt will be raised to £80,000 by the returns for November and December. Owing to disbursements during the half-year, on account of the new mill and for other capital expenditure, the cash resources in London will not be sufficient to enable the directors to pay any larger dividend than 9d. without making drafts on bullion in transit, a course they have never adopted, and which they do not think it expedient to pursue. Readers will probably recollect that this company is erecting a new mill, estimated to cost £70,000, which is to be taken out of surplus profits, the reason assigned by the directors for not writing any depreciation off plant and machinery in the last accounts. Should the capital expenditure add a substantial sum to this £70,000, the directors say they will consider how it shall be dealt with at the end of the fiscal year. They attribute the decrease in the net returns during the past four months to increased costs, caused partly by disorganisation in the regular operations incident to the construction of the new mill and preparations in the mine for a larger scale of operations when the new mill is completed, and also by the adverse movement in exchange, and by a new basis of

Pahang Corporation.—Although this company treated a larger tonnage in the twelve months ending June 30, than in the preceding year, nevertheless there is an appreciable falling off in the net results. At the battery 25,150 tons were crushed, producing 523 tons of black tin, of a value of £43,159, compared with 22,763 tons, yielding 662 tons of black tin, valued at £48,501. Sundry receipts increased the total income to £43,459, and the net profit was £11,547 only, against £22,240 in 1901-1902. This is attributed mainly to the falling off in the average value of the ore won, from 2.9 per cent. to 2.08 per cent. There has also been an increase in the cost of working, due to the condition of the labour market. Yet the average price of the tin at the dates of sale was much higher—£126 per ton against £118. After charging the above profit with depreciation and income-tax, the net credit is £9,660, which is added to £4,826. Out of this £4,430 is taken for the payment of the dividend on the preference capital for the year, leaving £10,055 to be carried forward. The directors express their regret that they cannot pay a dividend on the ordinary shares, it having been necessary to spend as much as £7,944 on new tramroads, machinery, etc., taken out of revenue. There is little fault to find with the balance-sheet, except that the provision made for depreciation is very meagre. An interesting announcement is made in the report to the effect that Mr. Pontifex, who has been chairman since the incorporation of the company in 1887, is desirous of being relieved of some of the duties of the chair.

Pekin Syndicate.—A circular has been issued by this syndicate announcing that an agreement has been entered into with the British and Chinese Corporation, under which all concessions for railways north of the Yangtse River hitherto obtained, or yet to be obtained by the two concerns, shall be joint, that is, such railways will be financed, constructed, and worked on equal terms by both parties. Official intimation has been received from the Foreign Office that an arrangement has been come to with the Chinese Government under which the syndicate's railway from Taokon, in Honan, to Tse-Chou, in Shansi, is to receive a guarantee from the Chinese Government on similar terms to those granted to the Russo-Chinese Bank for the Cheng-Ting-fu to Tai-yuan-fu railway.

Mr. R. C. Bucknall has been elected chairman, and Mr. Harold W. Bucknall, a director of Henry Bucknall and Sons, Limited, in the place of the late Mr. Henry C. Bucknall.

TRADE AND PRODUCE.

Wheat.—Duller than ever is about all that can be said for wheat this week. Cargoes are, as usual, without special feature, buyers maintaining an absolute indifference to all that takes place. Neither futures or spots have varied much, and business done in them is very meagre. English wheat had a better sale early in the week, obtaining from 3d. to 6d. a quarter more, and foreign wheat advanced about 3d., but without much demand. Farmers' deliveries obtained an average of 26s. 8d. per quarter for 51,695 qrs., against 26s. 6d. for 55,276 qrs. last week. As usual, also, American markets have shown more animation, fluctuating considerably with the varying influences. Reports of drought in the South-West, and heavy rains in Argentina, sent prices up as much as 5½c. in a quarter of an hour, but the bears had the upper hand later in the week. Bradstreet's estimates of 59,050,000 bushels in sight east of the Rockies, against 56,857,000 last week, helped to send prices down, and also the Kansas State crop report figuring the yield of this year's crop at 94 millions. Accounts of the harvests in Great Britain, just published, show what the record rains have done for us. The crop is estimated at 47,642,816 bushels, nearly 9,000,000 less than last year, and the wheat harvest of the whole world is some 16 millions less than in 1902. European and Asiatic countries between them are responsible for most of the deficiency, Australia and America, on the other hand, show an increase, particularly the former. Though harvests mostly have been poor, there is as yet no danger of a flour famine, for the surplus over consumption, as estimated by the *Corn and Produce Gazette*, is still nearly 170 million bushels. Last year it was 240 millions.

Wool.—The cold weather has brought a few more orders for winter goods, and helped the trade a little, both wholesale and retail. Ready-made garments have been in greater demand, but otherwise depression still reigns supreme. Short time is the rule in almost every district, raw materials are not wanted, and where sold prices have gone in favour of buyers. The London sales were supposed to have fixed the basis of values, but in one or two instances they have fallen still lower, coarse crossbreds particularly. Home grown wools are steadier, and holders show no desire to concede anything for the sake of obtaining a little transient business. Until the turn of the year the trade generally seems to have settled that nothing can be done to improve the position of affairs, and is turning its attention just at present to stocktaking.

Linen.—No change is apparent in either the present state of the market or the outlook for the future. Reports of the easier prices of Russian flax have only had the effect of checking buyers still more, and over here prices of Irish flax continue to harden in tendency. Yarns also are dearer, and only a very moderate business has been done in them. Manufacturers are more and more seeing the necessity of short time and the stoppage of a number of looms, for to keep up to present production at this slack season would increase stocks to such an extent as to weaken the position later on. The prospect is certainly not brilliant at present, brown linens, damasks, handkerchiefs, and housekeeping ends are all more or less dragging, dress goods are quiet and unions more difficult to deal with than ever. Cross-channel transactions have been a little livelier, the United States as irritating and uncertain as ever, and elsewhere business is keeping up fairly well for the time of the year. Cuban trade, which has improved lately, is expected to suffer after the Reciprocity Treaty with the United States has been completed, but only temporarily.

Cotton.—Though there was not the mad excitement of last week, Liverpool was very feverish all this, and prices fluctuated violently from day to day. The general impression, however, is that the Washington Agricultural Bureau has made a mistake in its estimates since the movement of the crop up to the present seems to point to a yield about equal to that of last year, and this after all is the safest method of calculation. Meanwhile the madness is passing off, and of last week's abnormal rise about half has gone already. The market, however, is entirely in the hands of the speculators, for the trade only buys sparingly, while waiting to see how the crop receipts work out in the next few weeks. Egyptian spot prices advanced in sympathy with American, notwithstanding the favourable reports of the crop, but they have since come back to their old position. The rise in the price of raw material naturally compelled spinners of American to advance their quotations, with the result that business has been brought practically to a standstill. Home trade buyers, we learn from Sir Jacob Behrens and Sons' circular, take only sufficient to meet their immediate wants, while the export trade is confined to small special lots chiefly for the nearer Continental markets. Business with India is hopeless, yet the enquiries are far more numerous than they were before the rise, the great drawback to the trade being the uncertainty of the whole position, and the violent changes in prices, which make it impossible for merchants to quote a firm price to their foreign correspondents. Egyptian yarns, on the other hand, were dealt in more freely this week, and in some cases a substantial advance was secured. For cloth there has also been a fair inquiry, principally from India, but here also the prospects of business are spoilt by the recent rise. Calcutta buyers show considerable anxiety to secure their supplies, and have raised their offers considerably above the prices at which they could have bought a little while back. Yet business does not result, since even these are not sufficient to meet with sellers' approval.

New York was more active than Liverpool all the week, but prices on the whole tended to slip back, the market being exhausted after its late outburst. Larger receipts also influenced values, while rumours of a bear pool were freely circulated, and helped to lower prices from the panic level they touched eight days back. Quotations therefore, though still high, show a considerable

difference on the week. One result the panic has had is to raise the thoughts of a reduction of the output in the minds of spinners, and the mill-owners of the South have held a meeting at which it was resolved to call a national convention to consider the subject. With the Southerners in this frame of mind, some such arrangement is almost certain, but while the capitalist may benefit, what about the workers' misery.

Last night Liverpool closed steady for spot, though Americans were only in small demand at 6.68d. middling, and 6.94d. M.F., or 10 points higher on the day. Egyptian were quiet and unchanged at 7 9-16d. fair, and 8 5/8d. F. G. fair, while of the other varieties East Indian only was dealt in to any extent. American futures were steadier even than spot, the market report being "Very Steady." For December the rate was 6.60d., and Dec.-Jan. 6.55d., while 6.50d. to 6.51d. was asked for Jan.-Feb., 6.49d. Feb.-March, 6.47d. to 6.48d. March-April, and 6.46d. to 6.45d. April-May, later positions ranging from 6.45d. May-June to 6.28d. Aug.-Sept.

Coal.—The cold snap did not last long enough to benefit trade to any great extent. A little temporary improvement is seen in the home coal branch, even Lancashire doing a little better and mills are working longer time, but prices are barely steady and difficult to maintain. Other branches are weak, steam more so than usual for the time of the year, owing to the depression in so many industries. From Wales there is nothing of interest to report.

Copper.—The market opened with a subdued tone, and a restricted business, but developed much activity later. The sudden rise in Amalgamated Copper shares on Tuesday made bears anxious to cover open commitments, and this, together with a larger demand in America and higher prices asked by producers, sent prices steadily up in spite of heavy selling operations by some influential houses. The market yesterday closed firm with cash at £57 and three months at £56 10s.

Tin.—This has been a lively, ever-excited week in the market, and prices, with only very slight fluctuations, have risen steadily, notwithstanding heavy selling among some influential houses. General buying has been good, and the turnover large. On Thursday morning it was fully 700 tons, Eastern advices have also been bullish, and all went well till yesterday. Then a change took place, for the market, though opening strong in the morning, drooped later, and the closing prices were lower at £123 15s. cash, and £125 three months.

Iron and Steel.—The Glasgow pig-iron market for various reasons week by week grows more and more depressed. The fear of American dumping is perhaps the chief, and the possibility of it still hangs like a cloud over the market. But at the same time the finished iron and steel trades are far from busy, and consumers only purchase sufficient to meet their immediate wants. Cleveland warrants were sold during the week for 41s. 7d. to 41s. 6d. cash, or delivered in four to twenty-one days at 41s. 7½d. to 41s. 5½d. A number of Scotch warrants changed hands at 48s. 9d. cash, but for Cumberland hematite there was no demand, the quoted price of 52s. 4½d. being only nominal. In the north of England also the market is dull and inactive, though perhaps not so quite as depressed as Glasgow. But the iron and steel makers, with few exceptions, are suffering from a dearth of orders, and prices generally have been reduced all round, iron ship plates being quoted at £6 2s. 6d. per ton, and angles at £6, while steel plates are at £5 10s. Rail makers are perhaps the most noteworthy exception to the general flatness, and they are busier than they have been for some time past, the price for heavy steel rails being £5 per ton net at works. At Barrow the hematite market continues quiet, with every prospect of still slacker times to come. The number of furnaces in blast is now down to twenty-four against thirty-five last year, and yet in spite of the consequent reduced output stocks are accumulating on the makers' hands. Steel makers will be busy on rails for another week, and after that will close down for the year, but when they will start again is very uncertain. The demand is poor, and though the official price is £5 5s. per ton, business has been carried through for less, so there is not much inducement for them to go on rolling.

Tea.—Auctions were again dull, in spite of comparatively small offerings. 32,563 packages of Indian were brought to market, prices for which were difficult to maintain even at last week's easier rates, and medium sorts went specially cheap. The week's average for 29,503 packages sold was 7.36d., against 7.34d. last week, and 7.61d. a year ago. Messrs. Gow, Wilson, and Stanton state that the quantity of this season's Indian tea offered at public auction up to date is 727,159 packages, little more than last year, which amounted to 727,086, and the analysis of the figures shows that fewer packages of Calcutta bought tea are included this year than last, 81,284 packages against 105,119, and that Southern India has so far sent about 7,000 packages more than last year. Ceylon auctions were better, with more inclination to buy, and prices steadier without actually advancing. The average for the week on the 15,489 packages offered amounted to 7.60d., against 7.67d. last week, and 7.71d. in 1902. Java offerings amounted to 2,080 packages, but the market was dull and weaker.

Sugar.—From Mr. Czarnikow's circular we learn that the December tenders have been mostly disposed of by being stored in Hamburg, but further sales of January-March holdings caused a decline of about 1d. per cwt., next crop being only ¼d. cheaper. During the week the trade has bought both English and foreign sugar fairly well, and with only a few marks of granulated on offer their values were well maintained in spite of the market generally being a declining one. The chief topic of discussion is the effect the present low prices will have on future sowings, and the opinions are many and varied, though on the whole the impression is that the safety of the market lies in the present low level compared with the cost of production. Nothing new has been published concerning crops or crop figures, and everybody is waiting for the final factory returns which will be issued in about ten days' time. The Indian Council has cancelled countervailing duties on new sugars certified by the British Consul and by the Government of the country of origin to have enjoyed neither direct nor indirect bounties. What the latter exactly means no one quite knows, but it is hoped that the whole matter is now satisfactorily settled, and anyhow business has been done at 3d. to 4½d. above United Kingdom parity. Prices for December beet are unchanged on the week at 8s. 4½d., though at one time showing a rise of ½d., while January-March is down to 8s. 6¼d., and April-June to 8s. 8½d. In cane there was very little done, a few parcels of crystallised grocery West India finding buyers at barely previous rates, though low brown descriptions of which the supply is scarce were able to command extreme prices. The American market declined to 3⅝ cents., equal to 8s. 11¼d. c.i.f. 96 per cent., or about 7s. 9¾d. f.o.b. duty free beet. But the position is very irregular, and will be until the fate of the Cuban Reciprocity Bill is known.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Assam Railway and Trading.—Dividends on the preferred "A" shares, at 6s. per share on account of arrears, payable Dec. 24; pre-preference shares, at 8 per cent. per annum for half-year ending Dec. 31, payable Jan. 5; new 6 per cent. shares, at 6 per cent. per annum for half-year ending Dec. 31, payable Jan. 5.

Bombay Baroda and Central India.—Dividend of £1 3s. 6d per cent. on consolidated stock, in addition to guaranteed interest.

Great Indian Peninsula.—Dividend of 17s. per cent., in addition to guaranteed interest, carrying forward £260.

INSURANCE.

Alliance Marine and General.—Interim dividend of 10s. per share.

China Traders.—Dividend for the year ended April 30 of 16 per cent., and a bonus of 15 per cent. on business contributed, the balance of $285,976 being carried to underwriting suspense account.

Pelican and British Empire Life.—Interim dividend of 5 per cent. and bonus of 1¼ per cent. in respect of current year.

BREWERIES.

Abergarw.—Interim dividend at the rate of 10 per cent. per annum on ordinary shares.

Chicago.—Dividend for year ended Nov. 30, at the rate of 5 per cent., payable 19th inst.

Farnham United.—Final dividend of 6 per cent. on ordinary shares, making 10 per cent., placing £2,240 to reserve, and carrying forward £3,555.

Newcastle.—Dividend at the rate of 12 per cent. per annum on ordinary shares for half-year ended Oct. 31, making 10 per cent. for year.

Ohlssons Cape.—Interim dividend of 15 per cent. on ordinary shares.

St. Louis.—Dividend of 16s. per share on preference shares, carrying forward £8,736.

United States.—Interim dividend of 8s. per share on preference shares for six months to Sept. 30.

MINES.

Associated Gold of W.A.—Dividend of 2s. per share, payable on Jan. 18, 1904.

Cape Copper.—Final dividend of 4s. on ordinary shares.

City and Suburban Gold and Estate.—Dividend at the rate of 10 per cent. (8s. per share).

Day Dawn Block and Wyndham Gold.—Interim dividend of 3d. per share, making, with first interim dividend paid in March, 9d. per share for 1903, payable 24th inst.

Durban-Roodepoort Gold.—Interim dividend on account of year ending Dec. 31, 1903, of 3s. per share (15 per cent.), payable 31st inst.

Henry Nourse Gold.—Dividend of 10s. per share.

Jubilee Gold.—Dividend of 5s. per share.

Lancaster West Gold.—Dividend of 10 per cent. (equal to 2s. per share).

May Consolidated Gold.—Dividend of 17½ per cent., equal to 3s. 6d. per share.

Meyer and Charlton Gold.—Dividend of 25 per cent. (5s. per share), which, with interim dividend of 3s. per share, paid in August last, makes 8s. per share for year 1903.

New Jagersfontein Mining and Exploration.—Interim dividend for year ending March 31, 1904, of 10s. per share.

Nigel Gold.—Dividend at the rate of 5 per cent. (1s. per share).

Peak Hill Goldfield.—Further interim dividend of 1s. per share, payable 31st inst.

Robinson Deep Gold.—Dividend of 15 per cent.

Roodepoort United Main Reef.—Dividend of 15 per cent. (3s. per share) for year 1903.

Simmer and Jack Proprietary.—Dividend of 5 per cent.

Sons of Gwalia.—Interim dividend of 15 per cent., payable Dec. 30.

Sulphide Corp.—Dividend of 5 per cent. on the preference shares, carrying forward £94,356.

Wemmer Gold.—Dividend of 50 per cent.

MISCELLANEOUS.

African Banking.—Dividend at the rate of 6 per cent. per annum, placing £10,000 to reserve, and carrying forward £9,442.

Boryslaw Syndicate "A."—Dividend of £2 per share.

British Steamship Investment Trust.—Interim dividend at the rate of 4 per cent. per annum on the deferred stock, payable Jan. 1.

Carron Grove Paper.—Dividend on ordinary shares of 7½ per cent.

Electric and General Investment.—Interim dividend at the rate of 10 per cent. per annum on ordinary shares, being 1s. per share, for the six months ended 30th ult., payable Jan. 1.

Kelly's Directories.—Interim dividend on ordinary shares at the rate of 5 per cent. per annum for half-year ended Sept. 30.

London and Tilbury Lighterage, Contracting, and Dredging.—Interim dividend at the rate of 6 per cent. per annum for six months ended Sept. 30.

Milner's Safe.—Usual interim dividend at the rate of 5 per cent. per annum for half-year ended Nov. 30.

Montgomerie and Co. (Bermaline).—Interim dividend at the rate of 8 per cent. per annum for half-year ending Oct. 30.

"South African," Newspaper.—Interim dividend of 10 per cent.

South African Hotels.—Dividend of 5 per cent. on ordinary shares, carrying forward £414.

Tower Tea.—Interim dividend at the rate of 7½d. per share on ordinary shares.

William Tod, Jun., and Co.—Interim dividend of 4 per cent. on ordinary shares for six months ended Sept. 30.

MINING RETURNS.

Alaska Treadwell.—Crushed 76,698 tons ore, value $85,054. Saved 1,500 tons sulphurets. Value $73,846.

Alaska United Gold.—Crushed 15,740 tons, value $21,456. Saved 325 tons sulphurets, value $9,594.

Alaska Mexican Gold.—Crushed 20,820 tons, value $27,485; saved 410 tons sulphurets, value $29,638.

Angelo.—Tons crushed 10,809, 4,043 oz.; tons treated by cyanide 8,707, 2,658 oz.

Ashanti Goldfields.—Obuassi 1,680 tons, 4,060 oz.; development 1,330 tons, 400 oz.

Ashanti Sansu Mine.—1,180 tons.

Associated.—Milled 5,348 tons; tailings 1,600 tons; slimes 4,109 tons. Total 7,419 oz.

Avino Mines of Mexico.—Leaching plant treated 2,000 tons, produced $21,500; ore shipped 550 tons, produced $12,500.

Balaghat Gold.—2,980 tons of quartz, 2,357 oz.; 2,160 tons of tailings (cyanide process), 218 oz.

Barrett.—395 oz., value £1,300.

Bonanza.—Crushed 8,250 tons, 2,923 oz.; cyanide and slimes treated 8,250 tons, 2,933 oz.

British Guiana Diamond.—3,700 diamonds, weighing 346 carats.

Burbank's Main Lode (1902).—274 oz. from 500 tons crushed.

Burma Ruby.—148,000 loads washed, producing rubies valued Rs.1,46,000. Royalties Rs.31,000.

Cape Copper.—Ookiep 1,690 tons of 16 per cent., equal to 252 tons of fine copper. Nababeep 3,336 tons of 5 per cent., equal to 155 tons of fine copper.

Cassel Coal.—Output 11,428 tons.

Champion Proprietary.—1,370 tons of ore crushed, 753 oz. 690 tons of tailings treated, 57 oz.

Chinese Engineering.—12,000 tons; sales, 15,500 tons; consumption, 1,175 tons.

Clitters United.—Ore treated 2,647 tons, mineral recovered 25 tons 15 cwt. 2 qrs. 14 lb. black tin and wolfram.

Consolidated Gold Fields of New Zealand.—Progress: Crushed 4,630 tons, yielding bullion value £8,221. Golden Fleece: Crushed 1,137 tons, yielding bullion value £1,946. Wealth of Nations: Crushed 975 tons, yielding bullion value £1,716. Total profits £6,118.

Copiapo.—970 tons copper ore, averaging 17 per cent.

Coetzeestroom Estates and Gold.—Crushed 900 tons old dumps, 130 oz.

Crown Deep.—Tons crushed 21,338, 4,683 oz.; tons of sands and concentrates treated by cyanide 14,000, 3,164 oz.; tons of slimes treated 5,717, 428 oz.

Crown Reef Gold.—17,618 tons milled; yielded from mill, 7,744 oz.; from cyanide works 3,789 oz.; from slimes works 290 oz.; total, 11,823; profit, £25,000.

Cumberland Niagara.—720 tons of quartz crushed, 277 oz.; tailings works 173 oz. from 1,025 tons; concentrates, 37 oz.

De Lamar.—Crushed 3,060 tons, $24,580 profit. $3,245 (£662). 878 oz.; total, 2,430 oz.; profit £385.

Driefontein.—Tons crushed, 14,066; ounces, 4,024; tons treated by cyanide, 10,955; ounces, 3,149.

Duke United.—1,200 fathoms yielded 940 oz.

Durban Roodepoort.—Quartz milled, 7,065 tons; 3,405 oz.; tailings treated 5,060 tons, 929 oz.

Durban Roodepoort Deep.—Tons crushed, 7,575, 2,443 oz.; tns of sands and concentrates treated by cyanide, 5,320, 1,188 oz.; tons of slimes treated 2,130, 188 oz.

Elandslaagte Collieries.—Output, 8,920 tons.

Ferreira.—Crushed 14,777 tons, 7,226 oz.; concentrates and sand treated 8,400 tons, 2,674 oz.; slime 3,973 tons, 500 oz.

Ferreira Deep.—Tons crushed 9,157, 4,154 oz.; tons of sands and concentrates treated by cyanide 6,120, 1,624 oz.; tons of slimes treated 2,610, 270 oz.

Fraser South Extended.—1,300 tons, 525 oz.; 75 oz. recovered by cyanide process from 530 tons of sands.

Freemantle Smelter.—Shipped 7th inst., 33 tons lead bullion; shipping 9th inst., 104 tons lead bullion. Total value, about 3,600 oz. gold and 9,400 oz. silver.

Geldenhuis Deep.—Tons crushed 24,360, 6,535 oz.; tons of sands and concentrates treated by cyanide 16,955, 2,970 oz.; tons of slimes treated 7,068, 458 oz.

Geldenhuis Estate.—Crushed 11,764 tons, 3,323 oz.; from tailings by cyanide 1,937 oz.; from slimes 555 oz.; from by-products 9 oz.

Glen Deep.—Tons crushed 13,660, 2,949 oz.; tons of sands and concentrates treated by cyanide 9,240, 2,252 oz.; tons of slimes treated 4,017, 383 oz.

Globe and Phœnix.—Crushed 2,035 tons, 1,020 oz.; cyanide, 1,200 tons, 252 oz.

Glynn's Lydenburg.—Crushed 1,620 tons, 371 oz.; cyanide, treated 1,095 tons, 358 oz.; slime treated 525 tons, 148 oz.; from by-products (from old slimes), 120 oz.

Golden Age Consolidated.—2,200 tons milled, 369 oz.; 1,394 tons tailings treated, 348 oz.

Golden Horseshoe.—Mill crushed 11,380 tons, 3,502 oz.; tailings treated 1,924 tons, 1,054 oz.; slimes treated, 8,673 tons, 3,964 oz. Shipped to smelters, sulphide ores, 1,331 tons, 7,030 oz.; concentrates 503 tons, 2,066 oz.

Great Boulder Proprietary.—9,046 tons of ore crushed: ounces 13,178; tailings (old), 2,591 tons, 808 oz.

Great Boulder Main Reef.—2,032 tons crushed, 920 oz.

Great Boulder Perseverance.—Gold, ounces 14,370; silver, ounces 2,240; contents of copper bars treated, gold, ounces 91; silver, ounces 42.

Great Fingall.—Tons of ore treated 8,181, 8,817 oz.; tons of tailings treated by cyanide 7,645, 953 oz.; tons of concentrates treated 56, 699 oz.; tons of slag treated 3½, 385 oz.

Hainault Gold.—2,235 tons, 1,043 oz., made up as follows:—By amalgamation 672 oz.; by cyanidation 291 oz.; by concentrates 80 oz.

Half-Mile Reef.—207 oz. from 500 tons.

Ida H.—1,100 tons crushed, 1,166 oz.

Imani Gold.—Crushed 945 tons, 359 oz.

Inveel Diamond Fields.—35 loads washed for 103 carats diamonds, and 710 lbs. tin.

Ivanhoe.—11,970 tons ore crushed, 4,489 oz.; 6,500 tons sands treated, 2,019 oz.; 4,760 tons slimes treated, 1,726 oz.; 560 tons concentrates treated, 1,795 oz.; 220 tons telluride ore treated, 691 oz.

Johannesburg Consolidated Investment.—New Primrose, 6,825 oz.; Glencairn Main Reef 3,649 oz.; Ginsberg, 3,489 oz.; New Unified Main Reef, 2,836 oz.; Rietfontein A, 3,361 oz.

Jourdie Hills Gold.—565 tons milled, 292 oz.; 609 tons tailings treated, 121 oz.

Jubilee.—Mill, 1,274 oz. from 5,312 tons crushed; cyanide, 406 oz. from 3,680 tons treated.

Jumpers.—Crushed, 3,381 tons; 887 oz.; from tailings by cyanide, 706 oz.

Jumpers Deep.—Tons crushed, 15,131; 3,489 oz.; tons of sands and concentrates treated by cyanide, 9,580; 1,959 oz.; tons of slimes treated, 4,752; 361 oz.

Koffyfontein.—1,910 carat recovered.

Lace Diamond.—Loads hauled and washed—yellow ground, 14,326; blue ground, 15,766; yielding, 4,006 carats.

Lachlan Gold Fields.—Crushed, 790 tons; result, £2,000.

Lake View Consols.—8,308 tons treated, 4,075 oz.; 486 tons sand, 78 oz.

Lancaster Gold.—Crushed, 8,090 tons, 1,846 oz.; cyanide works, 5,777 tons treated, 1,092 oz. Total, 2,938 oz. Tonnage crushed includes 1,145 tons from development dump.

Lancaster West.—Crushed 6,535 tons, 2,038 oz.; cyanide works, 4,637 tons treated, 658 oz.

Langlaagte Deep.—Tons crushed, 16,118, 3,336 oz.; tons of sands and concentrates treated by cyanide, 12,402, 1,729 oz.; tons of slimes treated, 3,598, 206 oz. Total, 5,271 oz.

Le Roi.—Shipped, 16,045 tons of ore, containing 5,305 oz. gold, 7,460 oz. silver, and 349,600 lb. copper. Shipped from the Dump, 869 tons of ore, containing 187 oz. gold, 222 oz. silver, and 12,300 lb. copper.

Malacca Diamond.—112 loads washed, producing 286 carats diamonds and 2,000 lb. tin.

Matabele-Sheba.—Mill crushed 1,221 tons, 798 oz.

May Consolidated Gold.—10,202 tons, 3,032 oz.; cyanide, 6,810 tons, 1,502 oz.; slimes, 2,297 tons, 250 oz.; total, 4,784 oz.; profit, £8,823.

Meyer and Charlton.—2,700 oz. from 9,242 tons crushed; 1,637 oz. cyanide.

Morven (Rhodesia).—Crushed, 1,165 tons, 704 oz.

Mount Boppy.—2,421 tons of quartz, 911 oz.; 1,645 tons of tailings (cyanide), 747 oz.; 654 tons of slimes (cyanide), 474 oz.

Mount Morgan (Queensland).—Tons chlorinated, 20,899 and 8,617 tons tailings, 11,981 oz.

Mount Yagahong Champion Mine.—Crushed 136 tons of ore, 137 oz. Tailings retreated yielded 175 oz.

Mount Zeehan (Tasmania) Silver-lead.—450 tons of silver-lead ore, containing about 290 tons lead and 42,750 oz. silver.

Mysore.—16,000 tons of quartz, 15,363 oz.; 11,540 tons of tailings (cyanide), 1,475 oz.

New Chillagoe.—Chillagoe Co., 2,761 tons copper ore, and 184 tons lead ore. Mungana Co., 529 tons copper ore, and 601 tons of lead ore. Purchased, 428 tons lead ore. Total, 3,290 tons copper ore, and 1,213 tons lead ore, producing 281 tons of copper matte, and 227 tons lead bullion, containing 145 tons copper, 227 tons lead, and 21,019 oz. silver.

New Goch.—2,217 oz. from 8,774 tons crushed; 866 oz. cyanide; 807 oz. concentrates. Total, 3,890 oz.

New Zealand Crown.—Crushed 2,690 tons of ore, value of £6,462.

North Kalgurli.—Crushed 1,172 tons, 584 oz.; cyanide, 180 oz.; concentrates, 15 tons of 2 oz. per ton; slimes, 550 tons of 7 dwts. per ton.

Nourse Deep.—Tons crushed 12,520, 3,318 oz.; tons of sands and concentrates treated by cyanide, 8,662, 1,904 oz.; tons of slimes treated, 3,528, 316 oz.

Nundydroog.—5,960 tons of quartz, 5,681 oz.; 5,211 tons of tailings, 516 oz. Total, 11,171 tons, 6,197 oz.

Obenemasi Syndicate.—167 tons of ore yielded 142 oz.

Peak Hill.—Crushed 5,705 tons, 3,063 oz.

Penhalonga Proprietary.—Milled 4.941 tons, 815 oz.; 118 tons concentrates recovered.

Queensland Menzies.—Crushed 289 tons, 323 oz.

Raub Gold, Malay Peninsula.—700 oz. from 2,800 tons crushed.

Rezends.—Crushed 2,800 tons, 644 oz.; from tailings by cyanide, 128 oz. Total, 772 oz. In addition seven tons concentrates produced containing 28 oz.

Robinson.—18,711 tons, 8,437 oz.; tailings, 2,737 oz. from own concentrates 833 oz.; from slimes, 761 oz.; from purchased concentrates, 959 oz.

Robinson Deep.—Crushed 24,388 tons, 9,102 oz.; from mill, 3,842 oz. from tailings; 585 oz. from slimes.

Roger's Golden Gate.—560 tons crushed, 718 oz.

Roodepoort Central Deep.—Crushed 5,714 tons, 2,103 oz.; cyanide, 4,133 tons, 819 oz. Total, 2,922 oz.

Roodepoort United.—2,761 oz. from 7,500 tons crushed; 1,024 oz. cyanide.

Rose Deep.—Tons crushed, 20,668, 3,907 oz.; tons of sands and concentrates by cyanide, 14,800, 2,742 oz.; tons of slimes treated, 6,571, 470 oz.

St. John Del Rey.—Gold produce, £24,400. Yield per ton, .61 of an oz troy.

Salisbury.—2,105 oz.; value, £8,950.

Santa Rosa.—Value of metals extracted from company's properties, $11,500; leased properties, $2,500.

Sheba.—Output, 2,772 oz.

Simmer and Jack.—Crushed, 23,992 tons, 5,639 oz.; 3,503 oz. from tailings by cyanide, and 398 oz. from slimes.

Sons of Gwalia.—Ore crushed, 7,729 tons, 4,157 oz.; tailings treated by cyanide, 4,500 tons, 1,123 oz.

Sutherland Reef.—Ore crushed, 1,250 tons, 303 oz.

South Kalgurli.—5,477 tons; total to present date, 7,257 tons; yield, 1,433 oz.

Star of the East.—Crushed 230 tons of ore, 92 oz.

Surprise Gold.—Crushed, 3,327 tons, 1,048 oz.

Talisman Consolidated.—Tons treated, 4,350; value, £7,877.

Transvaal and Delagoa Bay Colliery.—Output, 32,500 tons.

Transvaal Gold Mining Estates.—Crushed, 4,301 tons, 1,112 oz.; cyanide treated 2,950 tons, 947 oz.; slimes, treated 1,554 tons, 403 oz.

Treasury.—Crushed, 8,100 tons, 3,853 oz.

Tyee Copper.—Smelted—Tyee ore, 4,830 tons; Customs ore, 1,510 tons; matte produced from same, 700 tons; gross value of contents (copper silver and gold), after allowing for costs of refining and purchase of Customs ore, $65,735.

Van Ryn Gold.—Tons milled, 8,110, 2,720 oz.; Cyanide, treated, 6,600 tons, 1,351 oz.; total, 4,071 oz.

Village Main Reef.—Total from all sources, 7,311 oz.

Vivien Gold.—1,176 tons of ore milled for 550 oz.

Vogelstruis.—Quartz milled, 3,685 tons, 1,447 oz.; tailings treated, 3,030 tons tons, 369 oz.

Wemmer.—Mill crushed 8,080 tons, 3,658 oz.; 5,375 tons treated cyanide, 783 oz.; 226 tons concentrates; total, 5,795 oz.

Westralia Mount Morgans.—Mill crushed, 7,220 tons, 2,513 oz.; cyanide works treated 4,320 tons, 2,149 oz.; slimes treated, 2,204 tons, 577 oz.

Wolhuter.—13,460 tons, 3,721 oz.

Zeehan-Montana.—290 tons silver-lead ore, containing about 175 tons of lead and 25,000 oz. of silver.

Zoroastrian.—Crushed, 240 tons, 220 oz.; value of tailings, 3 dwts. per ton.

NEXT WEEK'S MEETINGS.

Monday, December 14.

Clark's Consolidated.—Winchester House, noon.
Great Indian Peninsula Railway.—Salisbury House, noon.
Imperial Russian, Cotton and Jute.—Institute of Chartered Accountants, noon.
Indian Midland Railway.—Salisbury House, 12.30 p.m.
Interoceanic Railway of Mexico.—Winchester House, noon.
Lake George Mines.—Cannon Street Hotel, noon.
Usher's Wiltshire Brewery.—Trowbridge, 2.30 p.m.
Wynaad Tea.—7, Mincing Lane, 2.30 p.m.

Tuesday, December 15.

Anglo-Continental Gold Syndicate.—Winchester House, 2.30 p.m.
Anchor Tin Mine.—Winchester House, 3 p.m.
Anglicia Petroleum.—Winchester House, noon.
Boston Consolidated Copper.—Winchester House, 11 a.m.
British North Borneo Gold Mining.—Cannon Street Hotel, 2.30 p.m.
Burma Railway.—Winchester House, 1 p.m.
British South African Explosives.—Winchester House, 2.30 p.m.
Continental Union Gas.—7, Draper's Gardens, 2 p.m.
Elysée Palace Hotel.—Cannon Street Hotel, noon.
H.H. the Nizam's Guaranteed Railway.—Winchester House, noon.
India Rubber, Gutta Percha and Telegraph Works.—106, Cannon Street, noon.
London and River Plate Bank.—River Plate House, noon.
Mayo Rhodesia Development.—Winchester House, 11 a.m.
Robinson's Brewery.—Cannon Street Hotel, 2.30 p.m.
United Rhodesia Goldfields.—Winchester House, noon.
South Indian Railway.—55, Gracechurch Street, 1.30 p.m.
South African Hotels.—Threadneedle House, noon.
Sulphide Corporation.—Winchester House, noon.

Wednesday, December 16

Auckland Park Real Estate.—Cannon Street Hotel, noon.
Anglo-Transvaal Development.—Cannon Street Hotel.
Associated Tamworth Mines.—Winchester House, noon.
Bulawayo Syndicate.—Winchester House, 12.30 p.m.
Bengal Central Railway.—Gresham House, 3 p.m.
Bartholomay Brewing.—Winchester House, 3 p.m.
Champion Reef Gold Mining.—Cannon Street Hotel, 12.30 p.m.
Cape Copper.—Cannon Street Hotel, 3 p.m.
Castle Arcade.—Cardiff, 3.30 p.m.
City of Chicago Brewing.—Winchester House, 12.45 p.m.
Crosfields.—Winchester House, 2.30 p.m.
Copiapo Mining.—Winchester House 11 a.m.
Isle of Thanet Electric Tramways.—Salisbury House, 12.30 p.m.
Kamfersdam Mines.—Winchester House, 3 p.m.
Louise and Co.—Winchester House, 3 p.m.
Mysore West and Eynaal Gold.—Winchester House, 2.30 p.m.
New Tamarugal Nitrate.—Winchester House, 2.30 p.m.
St. Pauli Breweries.—9, New Zealand Avenue, noon.

Thursday, December 17.

African Banking Corporation.—Cannon Street Hotel, 12.30 p.m.
Bonnie Dundee Gold Mines.—Cannon Street Hotel, noon.
Caylloma Silver Mining.—Cannon Street Hotel, 2.30 p.m.
Chelsea Waterworks.—Commercial Road, S.W., 1 p.m.
Commercial Bank of Scotland.—Edinburgh, 2 p.m.
Ingall, Parsons, Clive and Co.—Birmingham, noon.
London Woollen Co.—Cannon Street Hotel, noon.
Madras Railway.—61, New Broad Street.
Metropolitan District Railway.—Westminster Palace Hotel, 2 p.m.
New Zealand Loan and Mercantile Agency.—Winchester House, noon.
New Australian Broken Hill Consols.—Winchester House, 12.30 p.m.
Northern American Trust.—Dundee, 12.15 p.m.
Oceana Consolidated.—Winchester House, noon.
Palmarejo and Mexican Gold Fields.—Cannon Street Hotel.
Pampa Estancia.—River Plate House, 2 p.m.
Peruvian Corporation.—Great Eastern Hotel, 2 p.m.
South American Land.—River Plate House, 3 p.m.
Sheba Gold Mines.—Winchester House, 2.30 p.m.
St. Louis Breweries.—Winchester House, 3 p.m.
Tati Concessions.—Winchester House, noon.

Friday, December 18.

Army and Navy Investment Trust.—Winchester House, noon.
Balkis Land.—Winchester House, noon.
Beeston Brewery.—Winchester House, 3 p.m.
Bombay and Baroda Railway.—Cannon Street Hotel, 1 p.m.
Brett's Patent Lifter.—Coventry, 11 a.m.
Buluwayo Consolidated Gold Mines.—Salisbury House, 12.30 p.m.
Cape Glass Company.—Cannon Street Hotel.
Chicago Breweries.—Worcester House, 11.30 a.m.
Frontino and Bolivia Gold Mining.—Winchester House, 2 p.m.
Ionian Bank.—Palmerston House, 11.30 a.m.
King Prempeh Treasure Mines.—Cannon Street Hotel.
London Ashanti Corporation.—Cannon Street Hotel.
Mexico City Property Syndicate.—Winchester House, 2 p.m.
New Gutta Percha.—Winchester House, 11.30 a.m.
Rhodesia-Sebawkwe Development.—Salisbury House, noon.
Southern Mahratta Railway.—46, Queen Anne's Gate, noon.
Transvaal Estates and Development.—Winchester House, noon.
Taitapu Gold Estates.—Winchester House, noon.
Venezuela Central Railway.—Winchester House, 3 p.m.
Wearwell Cycle.—Wolverhampton, 5.30 p.m.

The Bank of Australia has opened a branch at Duketon, Western Australia.

The Christmas number of the *African World* is a magnificent specimen of modern art-printing, both letter-press and illustrations, being well and carefully done. But apart from its attractive appearance, the annual is interesting, as it contains many excellent articles on matters African, the special feature being the mining section. This will be found most valuable for reference, as it gives a resume of the progress made by the great African mines, in 1903, each notice being copiously illustrated with portraits of the directors and officials of the particular company, and with views of the mine.

COMPANY MEETING.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.

The ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held yesterday, at the offices, Leadenhall Street, Sir Thomas Sutherland, G.C.M.G., LL.D., chairman of the company, presiding.

The Secretary (Mr. G. F. Johnson) having read the notice convening the meeting,

The Chairman said.—Ladies and gentlemen, I presume that, as usual, you will take the report as read, and therefore it becomes my duty to move its adoption. I trust I may venture to say that you find the report to be in all respects both interesting and satisfactory. (Hear, hear.) As you are aware, we declare our usual dividend, with a bonus, which, together, amount to 2 per cent. on the total paid up capital of the company, a fair, but not certainly an extravagant return, considering that you carry on the dual business both of shipowners and underwriters. You are aware, however, at the same time, that we have made a very considerable appropriation to our reserve fund. Our reserve fund and our suspense account amount altogether now to £1,500,000, a sum which ought certainly to be a sufficient guarantee against all the ills the flesh is heir to in the shipping world. When I had the honour to address you last year, I stated that the financial year which had just passed over our heads had been on the whole the most fortunate period in the history of the company with which I was acquainted. I am glad to say that the present year does not fall very much below the high standard of 1902. (Hear, hear.) But the result is attained in a somewhat different manner. There was last year an affluence in our revenue which we have not been favoured with in the present year, but, on the other hand, we have a great saving of expenditure. Our revenue is diminished by £111,000, speaking in round figures, and our expenditure has been reduced by £97,000, so that, in reality, the difference between the last two years amounts only to about £14,000. As a matter of fact, of course, the great saving which we have acquired this year is due to cheaper coal and cheaper coal freights. During the last two years we have in fact seen a veritable revolution in those respects in regard to our business, for while in the year 1901 our coal charges amounted to £817,000, in the year 1903 the charge amounts only to £655,000, showing a difference of £184,000, with the same quantity of coal practically consumed, owing not only as I say to cheaper coal but to lower coal freights, and these, I need scarcely say, have reacted unfavourably on another department of our business, for where coal freights are low, freights altogether may be said to be low too. Well, gentlemen, the two years which I compare have been altogether exceptional. We laid by in the year 1902 extraordinary depreciations to the extent of £263,000. In the year to which the present report refers we set aside towards insurance risks the considerable sum of £250,000. We cannot of course anticipate that we shall have such years, except indeed at the rarest and most distant possible intervals. But I think we may fairly hope that unless circumstances prove extraordinarily adverse, I think we may fairly hope that we may count upon our average normal dividend which we have paid to you for so many years. Well, gentlemen, to descend from the general state of affairs to particular figures of the report, I may call your attention to the fact that our freights and charters, etc., show a revenue return of £1,778,000, which is a decline of £66,000 from that of the preceding twelve months. But we have gained considerably in this department during the last six months, for at March 31, on the date to which our half-yearly report refers, we were actually at the time nearly £100,000 short, as compared with the previous year, in the freight department. Therefore, you will quite understand that we have had considerable ups and downs, and large fluctuations in our revenue account during the past twelve months. I may say, for example, that the Australian trade has been bad throughout the whole period. I may say with reference to the Calcutta trade, we have sacrificed that trade in a great measure, in order to be able to charter additional transports to His Majesty's Government. But with regard to the India trade, I may say that the trade has been exceptionally good as far as its bulk is concerned, though, unfortunately, the rates have been far too low. If, to sum up the matter, I were to speak of the market prospects of the present moment, I should say that upon the whole they are not discouraging so far as the bulk of the trade is concerned, because we feel confident that Australia will speedily revive from the depression from which she has suffered so long. We know the crops in India on the whole are favourable, and that the China trade is also likely to be considerable, seeing that China must export largely in order—if for no other reason—to meet her extensive pecuniary obligations in this country. Well, the other side of the case of course is, that the tonnage, speaking generally, is still superabundant, and rates of freights are exceedingly low everywhere. We, as a mail company, have to bear in mind that we obtain as a general rule precisely the same rates, and no more, than are obtained by the ordinary honest tramp steamer. When I gave evidence a year ago or more before the select committee of the House of Commons, which was enquiring into the question of mail subsidies, I was certainly somewhat amused to find that it was considered in certain quarters that the P. and O. Company dictated in the matter of Eastern freights. I can only say that I sincerely wish that that were the case, because we should speedily bring about a very considerable reform in several important directions. But, as a matter of fact, it is the world's tonnage at large—the cargo carrying tonnage of the world at large—which dictates, or rather determines, the current rates of freight both by cargo steamers and mail steamers, and we are simply dragged in the wake of the great movement, as I suppose the great American combine has already discovered by this time. (Hear, hear.) Well, gentlemen, looking back on the figures of last year, I believe it has not been an infrequent experience on the part of shipowners, and most assuredly on our part, to find we have carried goods sometimes at figures which have barely paid for taking in and putting out and other local charges apart from the general cost of navigation. Now, on this subject I should like to say one additional word. By local charges we mean loading and unloading, trans-shipping, brokerage, rebates, and so on, all charges which have to be met before we begin to deal with the cost of navigation. I find that our expenditure in that way over the whole of our business last year amounted to no less than 23 per cent. of our total freight. Our experience in this respect may be somewhat singular, because our ships touched at so many ports, but at all events, such as the actual ascertained figure of the cost of our local charges before we begin to run our ships. I need scarcely say that we have endeavoured as far as possible to bring these charges within economical limits, but we have, as you will perceive, in earning, say, £1,000,000 of gross freight, to deduct no less a sum than £230,000 before we begin to deal with the cost of navigation, with the cost of the coals, the wages, the Suez Canal dues, repairs, stores, and with insurance and depreciation. And these disbursements are so great that we must always show on every ton of freight carried an extremely narrow margin, and sometimes I fear that during the past year the margin has not only been narrow, but it has actually been a negative result. Now, in connection with this matter, I should like to make an incidental observation which has some relation to the great fiscal controversy in which the country is at present engaged. I need scarcely say that I have no intention whatever in this place of dealing with the controversy, on anything like a large scale, but there is one observation which I should like to make, and it is this: It is constantly represented, and probably with considerable accuracy, that the revenue of the merchant shipping under our flag amounts to round about £60,000,000 sterling per annum, and that the revenue is available to pay for an equivalent amount of the imports into this country. Now I venture to say that in view of the great disbursements which have to be met by shipowners not only in this country but in every quarter of the world to which their ships sail, that the statement is absolutely a fallacy. I do believe that it is impossible to consider that the gross earnings of our tonnage are available to pay for an equivalent amount of imports, and that it would be, at all events, a more probable, and a more correct estimate if we were to say that only half the amount of our revenue was made available for that purpose. (Hear, hear.) That, however, gentlemen, is a mere speculative question, but there is another matter which I should like to refer to, and which is one of more practical consideration, so far as we are concerned, and that is the question of what is to be the future of this great port of London, because I regret to say that we find in our experience that London is at the present time not holding its own in regard to the whole of the Eastern trade. We have found it, in fact, during the last year or two, extremely difficult to load our mail steamers even, which are not large carriers, to the Port of London, and there is undoubtedly a tendency for freight from the East to take its departure for continental ports, and also for other ports in Great Britain, than this Port of London. I do not say for a single parture for Continental ports, and also for other ports or of any of the authorities connected with it, and I am quite sure it is not the fault of the shipowners, because the shipowners carry to London as cheaply as they carry to any other port in the world. But, at all events, if it is not its fault, it is certainly its misfortune, and it appears to me that it points to the very great necessity that some competent authority should be instituted—and that in the next session of Parliament—in order to control the great business of this place, to create the necessary facilities for carrying on the work in competition with the ports on the Continent and other ports in the United Kingdom, and to administer the affairs of this Port of London for the public advantage in a manner suited to the requirements of this great Metropolis, and I do think that if Parliament fails to deal with this question it will be a most serious misfortune. Now, gentlemen, I turn from the freight returns to our returns of passenger traffic during the past year, and I find that our revenue under that head amounted to £1,167,309, which shows a decline, I regret to say, of £51,000, but the loss has been clearly explained in the report as being due to the removal of the surtax which was imposed at the time when the coal was so excessively dear, and also to other modifications we have made in our tariff for the public advantage. I fear we have not yet fully felt thec effect of these reductions, and I myself anticipate a further sacrifice of revenue in this direction unless we are compensated during the next year, by an increased traffic, and it may possibly be that a revival of trade in connection with the Australian Colonies may assist us in that direction. There is another consideration and another difficulty which we may have to meet next year. You are, of course, aware that Russia has recently completed her great railway to Siberia, and that transit is made possible from London via Russia and Siberia, to ports in China, in a very much shorter time than could possibly be accomplished by sea. We cannot compete with a railway in point of rapidity of transit, but we can compete with a railway in point of fares, and accordingly we have decided to reduce our passenger fares to China very considerably from January 1 next. (Hear, hear.) Of course I cannot prophesy what may be the effect on our business of this railway competition, but it is just possible that

the existence of that railway may prove to be a benefit to us, for that has been the case in connection with the development of the Pacific railways, which took away from us a great number of passengers from China and Japan, but which brought into existence a large extent of world travel from which we have derived our share of the benefit, and I think it is not at all impossible that the future working of the Siberian railway system may prove in the end to be not a disadvantage but eventually an advantage to this company. In that respect, however, it is impossible for me to enter on the realms of phophecy, and I will merely add that we, at all events, show that we feel no jealousy or ill-will in connection with the creation of this very great work, a work of which any country would have reason to be proud, because we have been for some considerable time negotiating with the Russian authorities for a system of through tickets or return tickets, so that passengers may have the great advantage of travelling by the Siberian railway, and the still greater advantage of coming home by the P. and O. Company. (Applause.) So much with regard to our revenue, and I require to say but very few words indeed with reference to our expenditure. The principle variation in the accounts of the two years which I have been comparing, is in the cost of coal, and we have effected a saving, as you are aware, of £92,000 in that category. All the other items in the accounts are what I may call automatic, and I need not refer to them specially, but there is one little item to which I think I ought to make an allusion, and that is to an amount of upwards of £4,000 which appears as being paid by us for duties on Australian stores, that is to say, stores consumed by our ships while they are running between the port of Fremantle and the port of Sydney. You are no doubt aware from the papers that that system of imposing duties on our ships is something absolutely new, and is owing to the legislation of the new Commonwealth of Australia. At the request of the shipowners of Great Britain, generally, we appealed with a test case to the Privy Council, and the Privy Council upheld the legislation of the Australian Commonwealth somewhat to our surprise, because to the lay mind the procedure upsets altogether our preconceived ideas. Our ships when they are navigating between Fremantle and Sydney are for a considerable portion of the voyage at least 50 miles away from the Australian coast, and throughout the whole of the voyage they are entirely outside what we have hitherto always considered to be the territorial limits of any country. (Hear, hear.) I say, therefore, that the decision of the Privy Council seems to be at variance—I have no doubt—not with the law, but at all events with the rights which have hitherto been understood to belong to British ships on the high seas. Well, gentlemen, we can only deal with this small matter by recouping ourselves, by charging something extra for the glasses of whiskey and the glasses of wine that are consumed on the coast of Australia. We hear a great deal now about a big loaf and a little one, and I have no doubt we shall hear in Australia about a big glass of whiskey and a little glass of whiskey, but as a matter of fact, all the steamship companies have agreed that they will have in future two tariffs in existence for wine supplied on board their ships, one tariff being applicable when their ships are navigating all the other water of the world and a higher tariff to be applied to the ships running on what is considered to be the Australian coast. (Hear, hear.) Now I do not wish to make another speech to-day and, therefore, I will now refer to the Charter that comes before you for acceptance. I think I may credit our legal advisers and the board with considerable perseverance in obtaining this new charter on the conditions on which it has been obtained. It is fully two years ago, I think, since I pointed out to you the necessity of action of this kind on behalf of our constitution, which was too old-fashioned for the present time, and that we must in certain eventualities be most seriously trammelled in the operations for the benefit of the company, and that we should have preferred, if possible to place ourselves at once under the Limited Liabilities Act, and obtain the freedom of action which companies registered under the Act obtain. But there were technical difficulties in the way of our doing so, and therefore we have petitioned the King in Council to grant us a charter, which we have now just obtained. And I may say, on behalf of the board that we are extremely well satisfied with the powers which we have now obtained. I venture to think so far as the condition of our remaining a British company is concerned, that you will entirely concur with the directors in regarding that as a good, patriotic and sensible condition, for it was a condition which we anticipated, and in fact, prayed for in the petition which we addressed to the King in Council. There is one little matter which I ought to mention—or rather which I do not like to pass by without mentioning—and that is in reference to the figure of the remuneration of this board which is inserted in our new regulations. That figure is put down at £5,000 a year, instead of £4,000. And perhaps you will find some difficulty in realising that that figure was put there almost by a mistake. That is to say, I was asked by counsel what the fees of the board were previous to their being inserted in the petition, or in some great legal document, and I said £5,000 a year, totally forgetting the actual figure at the moment, and that it was only £4,000. I am quite sure that you will endorse—and I hope cordially endorse—this unintentional obliviousness on my part. I believe that thirty-two years have elapsed since any question was ever raised in this room with reference to the remuneration of the board, and I venture to say that the position of the company, the responsibility of the board and their work is now totally a different matter from what it was at that remote date. Gentlemen, you will be glad to hear that you have always had it in your power to increase the amount of the remuneration of the board whenever you felt inclined to do so. (Laughter.) I have only a word or two to say in regard to our ships—our fleet. We have had our ships at work in the past year with their usual efficiency, and with a punctuality which I think is admitted on all hands, and which I may say appears to me sometimes to be extraordinary, considering that they have navigated a distance of upwards of three million nautical miles. And, as apart altogether from the ordinary run of our business, I may incidentally mention that we carried last year no less than 47,000 troops in different directions. Well, with regard to our new ships, these large new vessels of the "Moldavia" type are, I believe, considerably in advance of the requirements of the present day, and their expense will at first sight weigh somewhat heavily in our accounts, but I have not the slightest doubt as to their ultimate success. For, as you must be aware, we have doubled the size of the ships of the company's fleet completely during the last twenty years, and I have no doubt that we have not yet arrived at the maximum, although the maximum must be determined in a great measure by the future development of the Suez Canal. There is one point in connection with the ships which we referred to in the report, and that is the sea insurance, and as you are aware we have made our position in that respect impregnable by the measures which we have taken in connection with our present accounts. And I have no doubt that you will agree with the board that it is better that we should pay our insurance profits to ourselves rather than share them with underwriters, however obliging the latter may be. Well, then, gentlemen, we generally glance at what is called the book values of our fleet, and I may mention to you that next year this book value will rise very considerably, because we shall add seven very expensive ships to our balance-sheet. But for the moment, at the end of the present year, the figures are somewhat remarkable, for the gorss value is only £8 10s. a ton, and the net value, deducting our cash reserves (and our reserves are in absolute cash) is only £3 6s. 10d. That is I venture to say a remarkable figure, considering that three-quarters of your fleet, at all events, are mail ships of the most costly description. It is one of my personal recollections, when I was first appointe as a managing director of this company, that your then fleet, which was considerably under £100,000, stood in your books at £30 a ton, or thereabouts, without any reserve whatever—without any cash reserve—and that there were men going about in the streets with placards on their backs on which were printed "Decline and fall of the P. and O. Company." (Laughter.) Well, that has not come about, at all events, so far. (Applause.) Gentlemen, of course there are very curious recollections connected with an old company—(laughter)—like this, and that is among them. What I state now is an actual fact; these placards and pamphlets to that effect were on sale outside our offices. With regard to our investments, you are aware that, unfortunately, another fall has taken place in the value of gilt-edged securities, but I am glad to say that so far as our investments are concerned the decline in prices does not exceed, on the whole, a total of £20,000; and I am perfectly sure that the price will recover long before we shall require to realise. On a recent occasion we were showing one of your new ships to some of your best customers, and I alluded to the shipbuilding which had been carried out by the company during the twenty-one or twenty-two years that I have had the honour of occupying this chair. The figure, I find, has been actually 398,690 tons, and the cost involved was £9,703,947. But why I mention the latter to-day is, as you will see, for a very good reason. The cost of that 400,000 tons of shipping works out at £24 11s. 10d. Now I need hardly tell you that during these twenty-one years we have disposed of an enormous fleet of old vessels, and you will be interested, no doubt, to hear at what cost—what we were able to realise—for your old ships, all of them being sold, I may say, before they reached the age of twenty years. The average selling price of your old ships, which cost £24 11s. 10d., was £2 16s. 6d. Therefore I think you will be able to realise in those figures the enormous waste which is constantly going on in connection with a business of this kind, and the necessity which must always exist for setting aside ample sinking funds, as we have been careful to do, more particularly when extra prosperity enabled us to do so handsomely. That puts you, gentlemen, in this position—to use a nautical metaphor—that if bad weather should happen to overtake you, if some chaotic storm should arise, why we can afford to shorten sail, and lie to and wait for better times. That is the state in which I am happy to say we submit your accounts to you to-day. There is one topic of considerable interest in the shipping world just now, to which I will refer in passing, and that is the novelty—the very important novelty—which the development of the turbine engine is likely to bring about. I may tell you that your directors are studying this matter with the greatest possible interest, and they see clearly all the advantages, and, at the same time, also the disadvantages, which the new system carries in its wake. We are giving it every possible consideration, and I am not quite sure whether we may not be disposed to adopt it for certain purposes at an early date. Now, there is another matter which you will perhaps think somewhat singular, owing to its absence from the report. I mean there is no reference in the report to the question of the mail service. Well, gentlemen, there is no reference in the report to that subject, simply because we are totally unaware of the intentions of the Government with regard to this great question. What we do know is what the policy of the company is, and has been for at least half a century. That policy is, so far as they are permitted to do so, to combine the diverse, and in a good many ways the antagonistic requirements of India, China, and Australia in one homogenous and efficient mail service, a mail service which has always been improved automatically, and

has always carried the mails, so far as we are concerned, at the least possible expense to the State. Now, gentlemen, I am very sorry to have had to detain you so long. I think I have now touched upon every topic in connection with your affairs, and therefore I will proceed to move the adoption of the report, but before actually actually doing so I should not like to omit to say what I, and what we as a board feel we owe to the grand zeal of our service both afloat and ashore, both at home and abroad. (Hear, hear.) And I am certain that if the zeal of the men in your service could assure success, you need never have the slightest doubt as to the future prosperity of this company. I now beg to move: "That the report which has been circulated to the proprietors be adopted." (Applause.)

Mr. Samuel Steuart Gladstone seconded the resolution, which was carried unanimously without discussion.

The Chairman: I now have to propose: "That a dividend for the half-year ended September 30 last of 2½ per cent. on the preferred stock, and a dividend of 6½ per cent. ,with a bonus of 3 per cent., on the deferred stock, as recommended in the report, be now decuared, and that the payment of the same be made, less income-tax, on and after the 18th inst."

This was seconded by Major-General Sir Owen Tudor Burne, G.C.I.E., K.C.S.I., and unanimously agreed to.

The Chairman next proposed the re-election of Mr. William Gair Rathbone as a director of the company.

Mr. William Adamson, C.M.G., seconded the motion, which was carried nem. con.

The Right Hon. Lord Burghclere was also re-elected to the board, on the motion of the Chairman, seconded by Mr. Peter Williams.

Mr. Pitt proposed, and Mr. Morley seconded, the reappointment of Mr. William Francis Courthorpe as auditor, which was agreed to.

Mr. Frederick Augustus White having also been re-elected to the position of auditor, on the motion of Captain Nelson, seconded by Mr. Langmore,

The Chairman said: That closes the business of the ordinary general meeting, and I now beg to declare the meeting constituted as an extraordinary general meeting. Without making a further speech on the subject of the charter, I beg to move: "That the proprietors of the company hereby consent to the acceptance of the ninth supplemental charter, which has been sanctioned by His Majesty in Council, and that such charter be, and the same accordingly is, hereby accepted by the company."

Sir Robert G. W. Herbert, G.C.B., seconded the resolution, which was carried unanimously.

The Chairman: I now beg to propose: "That all the regulations and provisions of the company's original deed of settlement, dated January 25, 1841, and all other regulations and provisions made or adopted in lieu of or in addition to the provisions in the said deed, be, and the same are, hereby repealed, and that the regulations set forth in the second schedule to the ninth supplmental charter be, and the same are hereby adopted in lieu of the regulations and provisions so repealed."

Mr. William Adamson, C.M.G., seconded, and the resolution was carried nem con.

The Chairman: That closes the business, and I am very much obliged to you for the cordial and unanimous way in which you have dealt with the matter. There will be a special confirmatory meeting held on Wednesday December 30, at 1 p.m., notice of which will be posted this evening, to vote on this charter again. I would ask a few proprietors to kindly bear that in mind and endeavour to attend. It will be a purely formal matter, but the business requires a certain number of proprietors to be present. Therefore, I shall be glad if you can make it convenient to attend. That ends our business so far as I am aware.

Mr. Stocks: Gentlemen, I may say with reference to the address we have just had the pleasure of listening to from the Chairman, I think it is one of the most interesting speeches I have even heard. The hours that I spend at these offices at the annual meeting of the P. and O. Company are some of the pleasantest hours I spend in the City of London away from my ordinary avocation. What has struck me very forcibly is the rapt attention which everybody has given to the Chairman's address. This is a crowded meeting, and there are a number of aged gentlemen present and yet no one has left the room during the whole of the time. I think that shows the sense of the proprietors feeling in the affairs o fthe company. So far as the Chairman is concerned, and his position as managing director, he has shown great ability in every way during the past year; indeed, not only this year, but for the last twenty years, that he has filled that position. It seems to me that year by year as the company goes on the reports are improving. So far as insurance is concerned, I notice that £50,000 has been set aside so as to keep the insurance in the hands of the company, which is a very excellent plan. Of course, this year the Chairman must have had an immense amount of work to do in settling this new charter. As he has stated it is a very great advantage to the company to possess all the regulations that are laid down therein. Altogether the Chairman and directors, many of whom we see present, have done their duty exceedingly well during the year, and I beg to move that we give them our most hearty thanks for their services. (Applause.)

The motion having been duly seconded, was carried with acclamation.

The Chairman: Gentlemen, I am very glad there is no opposition to that vote at all events—(laughter)—because whatever may be the merits of the charter, or the merits of the report, I am quite sure that the directors and the managing director of the company do deserve your confidence and your thanks. No men would, I feel certain, be more seriously devoted to the interests of this company or prouder of the great interest with which the company is connected, and of the modest success which it has attained, than my colleagues and I now are. (Applause.)

The proceedings then terminated.

ROBINSON SOUTH AFRICAN BANKING COMPANY.

The ordinary general meeting was held on Monday, December 7, at Bank Buildings, Lothbury, Mr. James Tyhurst (managing director) presiding in the absence of Mr. J. B. Robinson, who, it was stated, was confined to his room with a cold.

The Chairman stated that the first two items on the credit side of the balance-sheet, comprising the company's immediately available cash on September 30 last, amounted together to £2,053,374, showing, compared with the corresponding items last year, a reduction of about £1,000,000, which, coupled with a decrease of about £500,000 in their holding of Consols and other investments, practically represented the £1,500,000 cash which had been returned to the shareholders since the last annual meeting in repayment of half the original capital of the bank. Native gold in transit figured at £60,169, being an increase of £30,000. The South Randfontein Gold Mining Company had now begun to crush, thus supplementing the bank's receipts of gold from the Transvaal. Bills of exchange purchased and current at September 30 amounted to £312,685, or about £80,000 more; and bills discounted for and advances to customers, amounting to £1,199,640, showed an increase of about £670,000. The deposits, on the other side of the balance-sheet, amounted to £2,699,809, or over £600,000 in excess of the figures of last year; and the approximate amount of the increase in the funds had been utilised in the employment of advances and discounts in South Africa. The item of drafts outstanding was more than three times the amount at which it stood a year ago, evidencing the increase in the general bank business of the company. The expenses were about £7,000 more, chiefly owing to the opening of a branch at Durban and additional expenditure in connection with the increase of business at the other branches. Their total liabilities thus stood at £2,782,859, against which there were total assets amounting to £4,417,624. Their holding stood in their books at much below their aggregate cost, and their present price represented a large unrealised profit. The expense of the reconstruction, £12,359, was moderate, remembering the large amount involved and the disbursements on Government stamps, etc., and, as this outlay had to be defrayed by the old bank, it was deducted from the old reserve, the latter, on the other hand, being increased by £40,000, representing, in round figures, the profit realised between September 30, 1902, when the old bank practically ceased, and December 11, 1902, when the new bank was registered and came legally into existence. The capital reserve account thus now stood at £56,361, or about double what was possible under the articles of association of the old bank, when the deferred shares, now abolished, stood in the way. In addition, £10,000 more had been placed to the ordinary reserve account. The net profits of the past year available for dividend, after paying all charges, making ample provision for all bad and doubtful debts, and providing for all contingencies in the immediate future—the condition of affairs and of general business in South Africa calling, in the opinion of the directors, for continued care and caution—amounted to £193,403; and they had no doubt that, taking into account the slack time passed through and the impossibility of adding much to their usual banking profits by any flotations of or profitable dealings in the securities of the mining companies in which they were also interested, the shareholders would agree with the board in thinking this a fair result. They proposed appropriating this profit in the manner indicated in the balance-sheet—namely, by transferring £40.000 to capital reserve account, placing £10,000 more to the ordinary reserve, and by paying, in addition to the interim dividend of 5 per cent. last April, a final dividend of 2½ per cent., carrying forward £30,903. With respect to the various mining enterprises of which the bank was the London agent, the chairman at the last meeting, informed the shareholders of the progress which had been made on the extensive property of the Randfontein Estates and Gold Mining Company, and said that they all anticipated that before many months were over there would be an adequate supply of labour to carry on mining operations on a large scale on the Witwatersrand. Many difficulties had, however, arisen in connection with this important matter, and there had been a great scarcity of native labour since the termination of the late war. Many of the natives who had been working at the mines before the war, were employed by the military during the hostilities, at the close of which they went back to their country, with the result that there was a great deficiency of labour for the mines. Efforts had been made from time to time to increase the supply by the Native Labour Association as well as by the chairman of the company, but up to the present the increase had not been very great, and there was at present a movement in favour of the importation of foreign labour. There had been a good deal of agitation in South Africa on this matter, and the shareholders, no doubt, had also read the Labour Commission's report, which entered very fully into all these ques-

tions. The most interesting and significant figures given in that report were now in all their minds. There was no only an absolute shortage of native labour for present requirements, but a startling deficiency for the requirements of the immediate future. It was generally recognised now that the mines were the mainspring of the welfare of the entire South African Colonies, for, without their activity and prosperity, money could no be made or circulated in the country, and thus upon the prosperity of the mining industry depended the prosperity—he had almost said the existence—of a commercial and agricultural community. He was sure that the shareholders would realise the difficulty which the Randfontein Estates Gold Mining Company and its subsidiaries had had to encounter in carrying on operations on their various properties. The manager stated, however, that very good work had been done in the development of the mines and also in the erection of additional machinery. After giving further particulars respecting the Porges, the South Randfontein, the North, the Robinson, the Mynpacht, and the Block A Randfontein Gold Mining Companies, he stated that, as regarded the six new companies—Stubbs, Ferguson, East, West, Johnston, and Van Hulsteyn Randfontein—very little work had been done on the properties on account of the want of native labour, but both reefs on these properties were exceedingly good. The last annual reports of the companies were issued to the shareholders in June; they dealt very fully with all the mines, and since then development work had been continued in the mines, and the erection of the additional machinery had been proceeded with. The shareholders were, of course, all aware of the great crisis through which the country was passing at the present time. Everything connected with its trade had fallen very considerably, and there was no doubt that until all the mines on the Rand resumed milling, this depression would exercise a very baneful influence upon the general progress of the country.

Mr. J. H. Butt, seconded the motion, which was adopted. In answer to a question, the Chairman afterwards stated that the amount stolen from the Randfontein branch was £3,000. The matter was in the hands of the police, and the bank had offered an adequate reward for the capture of the robbers.

STRATTON'S INDEPENDENCE.

The fifth ordinary general meeting was held on Wednesday, December 9, at the Cannon Street Hotel. The Earl of Chesterfield presided, and, dealing with the revenue account, said that, after allowing for the amount of £1,690 taken from stock, the gross value of the output of 86,257 tons of shipping ore—namely, £361,480—worked out at an average of £4 3s. 9¼d. per ton, as compared with £4 17s. 7¼d. in the previous twelve months on an output of 96,173 tons. The mining expenses, exclusive of blocking out ore, etc., but inclusive of shipping, selling, and general charges, were £1 10s. 6¾d. per ton of shipping ore. To this must be added the cost of freight and treatment, £1 13s. 1d. per ton, making a total of £3 3s. 7¾d., and leaving a surplus over working expenses, freight, and treatment, of £1 0s. 2d. per ton. The result was a balance of £87,991 as the net amount derived from the output of 86,257 tons, inclusive of the small sum from stock. In addition they had received £6,004 royalty from waste dumps and other items, raising the total income for the year at the mine to £94,946. After providing for the entire cost of the mine development, £41,067, and the additions to plant, machinery, and buildings, £5,722, they were left with a net balance of £48,156. With regard to the increase in the working expenses of 6s. per ton of shipping ore, the manager (Mr. Cornish) pointed out that the cost of mining taken alone accounted for $1 per ton of the increase, the remainder being almost entirely in consequence of the excess of about £6,000 in the American taxes. In explanation of the heavier cost of mining, it might be stated that over the whole year every ounce of gold required an extraction in the mine of 2 3-5th tons of crude ore against 2 2-5th tons in the preceding year. The particulars given in the directors' report respecting the allocation of the profit and loss account balance of £133,986, as at June 30 last, made it unnecessary to deal with this subject. With regard to the case against the late Mr. Stratton's estate, it was not expedient to say anything more at present. The directors were relying on the judgment and advice of Mr. Hammond for the continuance of the action, and he was in frequent consultation with the company's legal advisers in the United States. On the accounts, he had only to add that the loan which appeared in the balance-sheet had now been entirely paid off, and the whole cash reserve in London was at present on deposit at their bankers. Over 10,000 lineal feet of development work was carried out during the year, and the ore was stoped at all levels from the 100 ft. to the 1,050 ft. After the 100 ft. level, the next best for quantity stoped, on the Independence system, was the 900 ft. A considerable tonnage came from the 960 ft. level—the first level of the new deep workings undertaken by this company. These two deep levels together accounted for over 29 per cent. of the output of crude ore from the Independence system. Having expressed regret that Mr. Hammond's report on the mine had not been received in time for presentation at the meeting, he proceeded to speak of the preliminary test of Mr. Cassel's process on the company's low-grade tellu'ide ore. In a letter, dated Victor, Colorado, the 14th ult., Mr. Cassel wrote:—"We have just finished some tests with most satisfactory results, and I have come to the conclusion that, with a properly laid-out plant, and using concentrating machines, we can handle profitably up here ores from $5 upwards. . . With regard to the dump on the Stratton mine, it will certainly pay to treat the older portion of it. Altogether I am very well pleased with the outlook, and the only thing for us now to do is to start at once the treatment of 10 to 20 tons per charge." Continuing, the chairman, in reference to the older portion of the dump, said that the manager stated, in June, 1901, that he estimated that there were 250,000 tons. Should Mr. Cassel's expectations be realised, the remainder of this dump ore would yield a large return to the company. The chief benefit would, however, be derived from the treatment of the regular output of the mine, which was heavily handicapped at present by the costly freight and treatment expenses. A saving of only 10s. per ton in this respect last year would have nearly doubled the net profit available for distribution. In conclusion, he moved the adoption of the report, which was seconded by Mr. C. F. Rowsell.

In reply to questions the chairman said that the Cassel process was an entirely novel one for dealing with low-grade ores. It was not a cyaniding process. This company had £1,000 invested in it out of the total capital of £3,500.

The report was adopted, and the dividend mentioned was agreed to.

BRETT'S PATENT LIFTER CO., LIMITED.

Notwithstanding the depression in the engineering trade, this little company managed to maintain its profits for the twelve months ended October 31, and even increased them by £40 to a total of £2,131. Debenture interest, administration charges, etc., including £100 to compensation reserve, required £60 more at £746, so that the net balance was £20 less at £1,285, and with £141 brought in gave a total of £1,426 against £1,305. Of this another £300 is added to reserve, raising it to £2,400, and the shareholders again receive 5 per cent. at an increased cost of £974, leaving £152 to be carried forward. The amount due to sundry creditors has risen by £1,139 to £2,607, while sundry debtors are only £433 up at £2,700, and cash in hand is £528 higher at £2,261. Goodwill and patents are still carried at £20,705, a policy which cannot be commended.

USHER'S WILTSHIRE BREWERY, LIMITED.

The directors state that the business for the year ended September 30 was the largest since the formation of the company, and there certainly seems little to grumble at. Gross profits were £25,452, and of this £6 609 was retained as net profits after meeting debenture interest and writing off £3,000 for depreciation, compared with £6,004 in the previous twelve months when only £2,000 was written off. To this was added £3,335 brought forward, and after meeting the preference dividend the ordinary shares receive 10 per cent. for the year, the board takes £682 for its remuneration, and £1,295 is written off cost of conversion of the debenture debt, leaving £2,670 to be carried forward. The last-named account includes the premium of £3,500 on the old debenture issue, and has now been reduced from £5,295 to £3 000. Trading balances are well in favour of the company, £15.901 being due to sundry creditors against £19,422 owing on trade debts and loans to customers, and cash in hand seems sufficient at £6,300. The reserve fund now stands at £20 000, but it is a pity some part of it is not invested outside the business, especially as the company owes £22,140 on loans and mortgages, and has £61,398 in debenture stock.

INGALL, PARSONS, CLIVE, AND CO., LIMITED.

Try as they like, the directors do not seem able to bring this unfortunate concern into anything like a paying condition, and they have now given up attempting even to explain the causes which have prevented their doing better. Yet gross profits for the year ended September 30 fell off £1,268 to £11,316, and even with a larger sum of £343 from interest and transfer fees, the total revenue was £1,117 less, at £11,659. Debenture interest and administration charges required a trifle more, the allowances for maintenance of buildings, plant, etc., and depreciation of plant were increased by about £557, and after writing off £299 for concentration expenses, providing £155 for depreciation of leaseholds against £271, the amount available was reduced by £1,604 to £2,023. To this was added £149 brought forward, and as there was no debit balance to wipe out this time, a dividend of 1s. per share, or 2½ per cent., is again paid on the 10 per cent. preference shares, and £739 is carried forward. The amount due to sundry creditors is not heavy at £6,623, but the company's position has not otherwise improved during the year. Sundry debtors, after writing off debts ascertained to be bad and deducting the reserve for discounts, allowances for bad debts, etc., show an increase of £541 at £38,277, stocks have risen by £3 235 to £52,212, and cash and bills receivable are £5,941 down at £9 650. A sum of £2,518, however, has been added to investments, making this item £7,245, but not a word is said regarding the securities held, and goodwill remains at the monstrous figure of £51 052. A new departure has been made with regard to the Australian trade, where the depots in Sydney, Melbourne, and Brisbane have been taken over and placed under the management of the late chief customer in the Colonies. Could he not make the business of importing coffins pay on his own account? Whether that was the reason for the change or not, we fear the company will not benefit much by it under the present board's methods of conducting the business.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Nov. 6, $15,319; increase, $8,342. Aggregate from January 1, $540,470; increase, $31,664.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Nov. 7, Rs. 51,736; increase, Rs. 11,003. Aggregate from July 1, Rs. 6,79,000; increase, Rs. 66,933.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Nov. 7, Rs. 13,131; increase, Rs. 6,730. Aggregate from July 1, Rs. 1,70,059; increase, Rs. 49,239.

Bengal Central Railway.—Traffic receipts for week ending Nov. 14, Rs. 38,309; increase, Rs. 9,682. Aggregate from July 1, Rs. 693,431; increase, Rs. 144,903.

Canadian Northern Railway.—Traffic receipts for week ended November 30, $89,600; increase, $19,700. Total, from July 1, $1,448,700; increase, $526,200.

Lucknow Bareilly Railway.—Traffic receipts for week ended Nov. 7, Rs. 23,747; increase, Rs. 5,203. Aggregate from July 1, Rs. 3,82,448; decrease, Rs. 14,612.

Quebec Central Railway.—Traffic receipts for the 4th week of November, $15,046; decrease, $1,232. Aggregate from January 1, $635,182; increase, $11,060.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Nov. 7, Rs. 12,314; increase, Rs. 3,302. Aggregate from July 1, Rs. 2,01,273; increase, Rs. 7,751.

Salvador Railway.—Traffic receipts for week ended Dec. 5, $14,500; increase, $5,000.

White Pass and Yukon Railway.—Traffic receipts for the week ended Nov. 30 amounted to $6,896.

English.

Cleator and Workington.—Gross receipts for the week ending Dec. 5, £1,162; decrease, £37. Total receipts from July 1, £25,554; decrease, £323.

Cockermouth and Keswick Railway.—Receipts for week ending Dec. 5, £746; increase, £21. Aggregate from July 1, £22,726; decrease, £995.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Dec. 5, £469; increase £28. Aggregate from July 1, £9,216; increase, £456.

Liverpool Overhead Railway.—Traffic receipts for week ending Nov. 29, £1,560; increase, £115. Aggregate from July 1, £36,746; increase, £2,428.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Dec. 5, £506, increase £1; aggregate from July 1, £12,740, increase £314.

Belfast Street.—Traffic receipts for week ending Dec. 5, £2,200, decrease £88; aggregate from July 1, £61,525, increase £1,600.

Birmingham and Midland.—Traffic receipts for week ending Dec. 4, £794, decrease £19; aggregate from July 1, £19,156, increase £18.

Birmingham City.—Traffic receipts for week ending Dec. 5, £4,890; increase £76; aggregate from July 1, £119,035, increase £3,703.

Blessington and Poulaphouca.—Traffic receipts for the week ending Dec. 6, £7; aggregate from July 1, £494, decrease £49.

Bristol Tramways and Carriage.—Traffic receipts for week ending Dec. 4, £4,273, increase £144; aggregate from July 1, £115,319 increase £4,546.

Burnley Corporation.—Traffic receipts for week ending Dec. 5, £774, increase for week £142; aggregate from July 1, £19,489, increase £3,171.

Dublin and Blessington.—Traffic receipts for week ending Dec. 6, £90; increase £7; aggregate from July 1, £3,325, decrease £139.

Dublin and Lucan.—Traffic receipts for week ending Dec. 6, £84; aggregate from July 1, £2,940, increase £174.

Dublin United.—Traffic receipts for three days ending Dec. 5, £4,059; decrease £81; aggregate from July 1, £117,183, increase, £7,694.

Edinburgh and District.—Traffic receipts for week ending Dec. 5, £3,858, increase £254; aggregate from January 1, £208,605, increase £20,580.

Edinburgh Street.—Traffic receipts for week ending Dec. 5, £389.

Harrow Road and Paddington.—Traffic receipts for week ending Dec. 4, £219, decrease £5.

Isle of Thanet.—Traffic receipts for week ending Dec. 5, £221, increase, £40; aggregate from July 1, £21,854, decrease £1,001.

London General Omnibus.—Traffic receipts for week ending Dec. 5, £19,582, increase £552; aggregate from July 1, £551,649, increase £11,099.

London Road Car.—Traffic receipts for week ending Dec. 5, £6,539, decrease £42; aggregate from July 1, £177,014, decrease £1,268.

Rossendale Valley.—Traffic receipts for week ending Dec. 4, £165, decrease £2; aggregate from July 1, £4,140, decrease £41.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending Nov. 9, £7,286, increase £1,979; aggregate from January 1, £272,872, increase £69,162.

Barcelona.—Traffic receipts for week ending Dec. 5, £2,076, decrease £80, aggregate from January 1, £112,914, decrease £3,680.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Dec. 5, £327, increase £123; aggregate from January 1, £14,581, increase £7,574.

Brazilian Street.—Traffic receipts for the month of August, Rs. 36,892; increase Rs. 2,241. Total receipts from August 1, 1903, Rs. 36,892, increase Rs. 2,241.

Brisbane.—Traffic receipts for the week ending October 21, £2,223, dcrease £18.

British Columbia Electric.—Traffic receipts for the month of September $259,666, increase $41,982. Net earnings from July 1 to September 30, $93,825, increase $22,219.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Dec. 5, £3,278, increase £303.

Buenos Ayres Grand National.—Traffic receipts for week ending Nov. 7, $48,956, increase $1,302; aggregate increase from April, 1903, $46,103.

Calais.—Traffic receipts for week ending Dec. 5, £160; decrease £31; aggregate from July 1, £4,482, increase £14.

Calcutta.—Traffic receipts for week ending Nov. 28, Rs. 35,111 increase Rs. 3,913; aggregate from July 1, Rs. 737,607, increase Rs. 133,921.

Carthagena and Herrerias.—Traffic receipts for the month of November, £2,555, decrease £1,935; aggregate to Sept. 30, £39,105; increase £967.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of October $348,646, increase $42,330; aggregate from January 1, $3,369,489; increase $98,079. Net traffic receipts $187,195, increase $23,104; aggregate from January 1, $1,809,151, increase $169,286.

NEW ISSUE.

CANADIAN PACIFIC RAILWAY COMPANY.

ISSUE OF £2,803,000 STERLING PERPETUAL 4 PER CENT. CONSOLIDATED DEBENTURE STOCK.

THE CANADIAN PACIFIC RAILWAY COMPANY is prepared to receive applications for the above Stock, bearing interest at the rate of 4 per Cent. per annum, accruing *from the 1st January 1904*, payable at the Company's London Office on January 1 and July 1 in each year. This Stock is in all respects identical with that quoted on the London Stock Exchange.

The price of issue is 106 per Cent., payable as follows:—

£10	per £100	Stock on	Application.
16	"	"	Allotment, January 4, 1904.
20	"	"	February 8.
20	"	"	March 7.
20	"	"	April 6.
20	"	"	May 9.
£106			

Or, after allotment, payment in full may be made under discount at the rate of 3 per Cent. per annum on any Thursday, and Stock Certificates will then be issued for such fully-paid Stock.

The above-mentioned Debenture Stock is issued to provide (1) for the cost of the Company's Atlantic Steamship Line, consisting of Fifteen Ocean Steamships and their appurtenances, as shewn in the recently issued Annual Report, amounting to £1,417,500; and (2) the cost of Four Hundred and Seventy-one additional Miles of Railway Lines constructed and acquired pursuant to authority given by the Shareholders, and amounting to £1,385,500.

The subscription will be closed on or before Wednesday, 16th instant, at 4 p.m., and in cases where it is not practicable to make any allotment, the amount deposited on application will be returned as soon as possible.

The failure to pay any instalment when due renders all previous payments liable to forfeiture.

1, Queen Victoria Street, London, E. C.
December 10th, 1903.

The Investors' Review.

Shell Transport and Trading Company.

After a weary and anxious wait of close upon six months shareholders in this great oil carrying and distributing business are at last favoured with the report and statement of accounts for the twelve months ended December 31, 1902. It is however, a little startling to find that even now an absolutely correct presentation of the company's position cannot be given, and it is probably only to save the late Lord Mayor, Sir Marcus Samuel, from the possible indignity of being summoned before his successor for a breach of the Companies' Acts that the accounts were issued at all during the current year. All the delay is attributed to the Eastern Producers' Alliance, referred to in the last report—issued eighteen months ago—which has been remodelled and extended so as to include important Russian producers. The protracted negotiations were recently brought to a satisfactory conclusion, and the Asiatic Petroleum Co., Limited, was duly registered, but that does not mean that everything has been put to rights, and that the "Shell" Company knows exactly where it stands. No doubt an important amalgamation such as this brought with it a good deal of tedious detail adjustment, but the settlement of accounts with this Asiatic Petroleum Company for the half-year to December 31, 1902, ought to have been managed within a period of twelve months. Whether possible or not, however, the thing was not accomplished, and so it is that as regards the second half of the year the "Shell" accounts are to some extent based upon estimates of profits prepared on behalf of the directors. Therefore, until the accounts between the Asiatic Petroleum Company and this company have been definitely agreed, certainty with regard to results cannot be reached. All this must be very confusing to those who are aware that the agreements between the Asiatic Company and the other parties interested were only definitely settled during 1903, but the working arrangements commenced from the middle of the previous year, and consequently the amount of the "Shell" Company's interest in the subsequent trading as merchants, apart from that of shipowners and proprietors of installations, depends upon the results of the combined trading carried on by or on behalf of the Asiatic Company. The agreements between the concerns also contain important provisions with reference to capital, and glancing for a moment at the "Shell" accounts we find that some of its heavy stocks have been passed over to the Asiatic Company, that concern owing a net sum of £534,034 for "stocks of oil and material as at July 1, 1902, and for steamers purchased under the agreement; also payments less receipts on account of oil shipments, installations, etc., from July 1 to December 31, 1902, pending the completion of the agreements ultimately dated July 2, 1903."

Sir Marcus Samuel will, we may be sure, make good the shortcomings of the report by giving shareholders the fullest details regarding these agreements at the meeting on Tuesday next, because at present the light is by no means clear. Of equal importance is it that everything possible should be made known concerning the undertaking known as the Nederlandisch-Indische Industrie end Handelmaatschappij. Through this company with the jaw-wrenching name the "Shell" Company conducts its Borneo oil business, and is further interested in it to the tune of £929,608, shares held being £183,622, cash advanced £734,919, and current balances due £11,966. Rumour says that some very heavy losses have been incurred through this Dutch Exploration Company, and the auditors tell us that the course followed in respect of the year 1901 has again been adopted. That is to say, the period of exploration is not yet considered at an end, and the proceeds of the oil taken over by the undertaking at agreed prices are practically treated in the balance-sheet of the Dutch Company as a reduction of capital expenditure. At the same time the "Shell" directors take no credit for interest on advances—presumably because it was not paid—and we note that the sum now owing for interest is the important amount of £79,909. The auditors, too, find it necessary to complain of the Dutch accounts which they say are neither so complete nor so satisfactory as they should be, and special steps ought to be taken to bring the books and accounts in Borneo and London into accord. In reply to this, the directors say that arrangements have been made for a local audit in the future, and the profits of the Dutch Company will, when that undertaking is on a proper working basis, be dealt with separately. The production of crude oil from the Borneo fields during 1902 was 122,600 tons, and the current year's output shows a substantial increase. We can now turn to the question of profits, and shareholders will find the record exceedingly disappointing. The retrogression during the past three years has been painfully persistent and rapid, and in order that proprietors may see clearly its extent we have compiled the following comparative statement:—

	YEARS ENDED DECEMBER 31.			
	1899.	1900.	1901.	1902.
	£	£	£	£
Trading profits ...	366,069	355,700	254,161	219,567
Balance of interest account ...	+3,406	+20,693	−16,138	−8,026
	369,475	376,393	238,023	211,541
Management expenses and income tax	28,386	30,650	34,485	32,219
Depreciation ...	64,495	79,400	92,771	86,458
Written off cost of preference share issue	—	—	—	10,000
Written off American expenses ...	—	—	—	1,359
Net balance ...	276,594	266,343	110,767	81,505
Brought forward...	7,028	39,622	115,965	26,732
Total available	283,622	305,965	226,732	108,237
Preference dividend	—	—	—	38,682
Ordinary dividend	(8 p.c.) 144,000	(10 p.c.) 190,000	(10 p.c.) 200,000	(2½ p.c.) 50,000
Placed to reserve	100,000	—	—	—
Carried forward...	39,622	115,965	26,732	19,555

For the year 1902 the trading revenue was £219,567, or £34,594 less than in the preceding year, and £146,502

below the 1899 record, the capital from 1899 to 1901 being £1,000,000 smaller than it was towards the end of 1902. Management expenses were more than £2,000 lower, and a sum smaller by £6,313 was allowed for depreciation. So, after writing off £10,000 from the preference share issue costs, and £1,359 off the American outlay, the net balance is £81,505, against £110,767. For 1901 the company distributed £89,000 more in dividends than was earned by drawing largely on the big sum brought forward, but now the balance credited from previous account is comparatively small, and there is £38,682 to find for preference dividend. As a result, the ordinary shareholders must be content with the 2½ per cent. paid in January of the present year, and are now probably reflecting in chastened mood on their good fortune in being graciously allowed to subscribe for these £1 ordinary shares at £2 10s. each, or 30s. premium. Reverting to the balance-sheet, it is to be noted that the £1,000,000 raised last year by the issue of preference shares has enabled the company to effect a big reduction in its floating liabilities, although they are still pretty substantial at £857,732. The capital of the concern is £3,000,000, and of the reserve of £400,000 three-fourths consists of share premiums. On property during 1902 the directors spent £290,114, making the total £3,017,071, but certain deductions must be made from this. First there is the book value of steamers purchased by the Asiatic Petroleum Company, and of the *Verité* lost during the year, together £270,955, and also the net allowance for depreciation, £330,252, this being the aggregate for rather more than five years to the date of the balance-sheet. We should judge this sum to be somewhat insufficient.

Reference has already been made to the Dutch and Asiatic Companies' items, and it only remains to add that notwithstanding the issue of new capital, and the reduction of floating liabilities, the company is still seriously "locked up." Debtors amount to only £75,385, and cash and bills reach £117,042. There are shares in the Petroleum Producte Action Gessellschaft to the amount of £98,500, but these cannot be counted a realisable asset any more than the other investments, and stocks are at present no more than £74,681. After deducting the already mentioned £10,000, preference share issue expenses still stand at nearly £40,000, and altogether the display is not very illuminating. Fortunately a good part of the ordinary shares rests in the hands of the partners of M. Samuel and Co., the "Shell" managers, but the unlucky public took up a fair proportion of the preference issue, and has at present to face a market depreciation of 30s. per share for its temerity. All may come out square and right, but at present the business is credit-bolstered to an extent that bodes no good.

Economic and Financial Notes and Correspondence

The Dulwich and Lewisham Elections.

All things considered these two contests have turned out as well as could have been expected, and the results are highly creditable, not only to the two candidates, Mr. Masterman and Mr. Cleland, who fought an uphill fight, but to the energy with which a large army of workers threw themselves into the contest. When we consider that these two constituencies have been amongst the most neglected in the three kingdoms, wholly given over to a benighted Toryism, and that the battle was fought upon an old register badly neglected because of lack of funds on the part of the Opposition as well as because energy and cohesion amongst voters are conspicuously absent all over the metropolis, it is really astonishing that upwards of 10,000 votes in favour of free trade, unsectarian education, and economy in public affairs should have been cast. Probably this is not the view taken by the victors, but if they are tempted to pursue their present career in search of national abasement we shall not deeply regret it. In all probability, it may be added, if there had been no out-voters to reckon with and if the register had been clean and automatically made up, as it ought to be, neither Tory candidate would have headed the poll. Only when one has to take some part in an election contest are the difficulties besetting free expression of opinion in any degree realised. Disfranchisement is the best ally reactionaries still have in this country, disfranchisement through an antiquated and disgraceful method of registering voters, and through the long delays that occur before such citizens as do get upon the register are free to exercise their rights. The people of this country have never been as a body enthusiastically democratic, else they would have had anomalies like these swept away long ago, and evidently the electorate of Dulwich, composed to such a large extent of people who must by their very calling cultivate sycophancy, have not yet suffered enough by excessive taxation and want of employment to have their minds opened to the truth; but the result of the fight is all the more a credit to those amongst them who have had the courage and independence to stand up for their rights against monopolies, against the wasters of public wealth, and the deluding vaticinations of the protectionists.

Mr. Schuster on Foreign Trade and the Money Market.

We have had no more weighty deliverance during the whole of the present gratuitously fomented controversy upon trade and tariffs than the lecture delivered by Mr. Felix Schuster at a meeting of the Institute of Bankers on Wednesday evening last. Mr. Schuster is one of the most thoughtful and enlightened of our bankers, Governor of the Union of London and Smiths Bank, and vice-president of the Bankers' Institute. His subject was "Foreign Trade and the Money Market," and so wise were his words that we cannot do better than reprint here some portions of his essay as summarised in the *Times* of Thursday. After dwelling upon the present state of the money market and the suddenness with which the country had been brought face to face with a demand for the reversal of all the traditions under which the last two generations had been brought up, and pointing out that so far there had not been so much as a debate in Parliament on the subject, and no Royal Commission, he went on to examine the effects that protectionism might have upon our banking system. London, he remarked, is admittedly the financial centre of the world. That is a fact, not a mere phrase, and from this point he proceeded as follows:—

> The progress of banking, and the benefits it brought to the nation, like the progress of, and benefits derived from, the other of the great commercial assets of the United Kingdom—our great merchant fleet and all that it meant—were left entirely out of sight. They did not appear in the tables of imports and exports, on which so many arguments were based. A bill of exchange on London was the recognised medium of settling international transactions, which was made use of in all parts of the world. It was owing to our having first established a trade with foreign countries, a trade more important than each carried on with other countries, that ours had become the supreme money market. It had been said that trade followed the flag; but more surely could it be said that banking followed trade; and if our trade for any reason whatsoever were to be restricted within narrower channels, then with absolute certainty others to whom this trade would fall would also oust us from our supreme position in the international money market. (Cheers.) As the prosperity of bankers was dependent on that of the nation, so again every one of our industries, and our whole trade, and the employment of our working population was, in the United Kingdom more than any other country, dependent on the unimpaired maintenance of our banking system, and that again was largely dependent on our position as the bankers of the world. (Hear, hear.) That the present system of unrestricted trade must increase our banking resources, as it must also increase the national income through our shipping trade was, to his mind, beyond question. It was quite clear to his mind that the effect of our large foreign trade had been distinctly in the direction of lowering the value of money in our market, and consequently an undoubted aid to our industries. In fact, he believed that to it was, in a great measure, due the fact that until quite recently our money market had been the cheapest in the world, though, of course, other causes had contributed. Cheap capital was an absolutely essential element in every industry, perhaps the most essential; that was universally recognised, but he did not think it was realised to what extent ability to supply capital must help our export trade. So long as our money market remained the cheapest in the world, so long should we be able to take from foreign nations and our own Colonies the loans they might have to place for the development of their own countries; and the increase of our export trade to these countries would follow as a natural result.

Proceeding next Mr. Schuster had some important reflections to offer upon the composition and determining elements of our foreign trade and the carrying trade connected therewith. Our excess of imports over exports, he said, had risen from £100,000,000 in 1885 and only £80,000,000 in 1886 to £179,000,000 in 1902, and he pointed out that this excess came from a variety of sources and not necessarily exclusively from profits on our visible exports. Our great carrying trade and our large foreign investments all contributed. Also, at times, there is the sale of foreign securities held here, reinforced often to some extent by the investment of foreign capital in our home securities. For all these movements of capital as for the earning power of our mercantile marine, there are absolutely no statistics. Not only is our shipping engaged in our own import and export trade, but also in the carriage of goods between foreign countries or between British colonies, and of this also there is no record, any more than of the movements of capital out and in. All this part of our earning power is invisible, and the only inference we can always safely draw is that if our imports are in excess of our power to pay for them, foreign exchanges would be depressed, money would become dear here as a permanent condition, and we should be gradually turning from a creditor country into a debtor country. Our purchasing power would decrease, leading directly to a reduction of imports, and wages and prices generally would fall. All this is admirably stated, and the lessons driven home. Not the least significant of these lessons is the fact that London has been for many years the cheapest money market in the world, making it clear that foreign exchanges could not be as an habitual thing against us. With the exception of 1890, the year of the Baring crisis, it was not until 1898 that our rate of discount rose above that of Paris, and not until 1901 that money was dearer here than in Berlin. The conclusion of Mr. Schuster's valuable paper must be given in his own words as reported, and we are glad to note that most of those present endorsed the paper heartily and to the full. Sir Robert Giffen, indeed, reserved his approval of Mr. Schuster's suggestion that a special Government department should be created to watch over the interests of commerce, and we are inclined to agree with this reservation, having a distrust of official interference with trade in any direction. But an objection of this kind in no way detracts from the force of Mr. Schuster's argument and general conclusions. These conclusions are dead against the factitious and unnecessary agitation whose centre is in Birmingham, and the pity is that a paper like this cannot reach the masses whose uninstructed minds are being beguiled by falsehoods and stuffed with dangerous fallacies:—

With regard to the three distinct policies which had emerged during the last few months—namely, preferential treatment, retaliation, and protection, no matter what their opinions might be of the results of the policy decided upon sixty years ago, they had to deal with present conditions; we had a large and growing population dependent on a large proportion of its food supplies and raw materials for its manufactures, having to be imported from abroad. We were compelled to import in order to find for our population both subsistence and employment. (Hear, hear.) As countries advanced in civilisation, they advanced gradually from the purely agricultural to the manufacturing and commercial stage of development; we could not expect countries like Germany or the United States to allow their own natural resources to remain undeveloped. (Hear, hear.) We had competition to meet, and to do so we must be able to produce more cheaply and a better article than others did, and we must safeguard our position as the world's bankers and carriers, as well as the position of our manufacturers. Whether any of the three new policies, or a system of trade with the fewest possible restrictions was best calculated to bring about that end was the great problem that had to be solved. (Hear, hear.) Whereas we had now competition between a number of different sources of supply which kept prices down, the inevitable consequence of a preferential tariff on food-stuffs would be the absence of all competition, our being restricted to one source only, and it was to be expected that prices would consequently rise to an extent greater than the duty to be imposed. What would happen in time of war if we had only one colonial source of supply? These were matters on which our naval experts would also have a word to say, quite apart from the question of price. (Hear, hear.) If wages rose the cost of all our productions must rise, especially if, as is suggested, part of the scheme was taxation of foreign manufactures, which would further raise the price and increase the cost of living to our wage-earners and to the whole of our population. If then the cost of our manufactures be increased, our exports to neutral markets must decrease, and our own colonies would derive no benefits from the scheme, because they would have to pay more for our manufactures than at present—(hear, hear); their own protectionist system would only be still more stimulated to the further exclusion of our own goods. He could not, therefore, perceive any advantage from the scheme, either for the colonies or for ourselves, but only greater cost of living and fewer chances of employment. (Hear, hear.) Could we afford to risk our trade with foreign countries, which still amounts to 75 per cent. of the whole? Could we afford to restrict our trade within narrower channels, having regard to our great shipping industry, which carries so much of the trade of the world? The danger of all protective systems, so far as could be learnt from experience, was that, once established, it was most difficult to get away from them, and that they had a constant tendency to grow. As to retaliation, it was impossible to express any opinion without precise definition of what that term meant; it was entirely a matter of application and degree. Every possible effort should be made to minimise, as far as possible without injury to ourselves, the effect of hostile tariffs; and to negotiate commercial treaties in such a way as to bring about that result; but regard must be had to the question whether the injury resulting from any new duties was not greater than any advantage derived from them. (Hear, hear.) Mr. Schuster concluded with the expression of a strong opinion in favour of the creation of a special Government department to watch over the interests of commerce. The head of such a deprtment would, he doubted not, before any changes affecting the commercial policy of the Empire were proposed, seek the advice of experts, and take the country into his confidence, and let them know what that advice was and on what evidence it was based.

The Labour Market.

It is not a very cheerful report that the Labour Department of the Board of Trade furnishes about the employment of workmen during the month of November, but we are astonished that it should not be worse than it is. Almost all the increased taxation now being drawn out of the pockets of the people means in the end a reduction in the capacity of employers to pay wages to their workmen because it also implies diminished power of the consumer to buy. Our present extravagance has only to continue a few years longer to make the cry of the unemployed almost as threatening as that of the hunger-driven mobs familiar during the earlier years of the French Revolution. For a time the disbursement of the increased taxation helps to bolster certain employments, but the longer that form of relief continues the worse becomes the position of all trades to whom none of this money is distributed. It is accordingly most noticeable that those trades which depend for prosperity upon the power of the people at large to consume the products of their labour are already amongst the worst sufferers. Employment is bad in the shipbuilding trades, worse than a month ago, and considerably worse than a year ago, the Board of Trade reports. No less than 17.1 per cent. of the Trade Union members were out of work at the end of November, or almost 2 per cent. more than at the end of the previous month, and 4 per cent. more than in November, 1902. Employment is bad in the hosiery trade, the leather trades, the bespoke and ready-made tailoring trades, the hat making trade, and in the worsted and woollen trades. The badness is not alike in all, but even at the best the demand for labour is languid. In the engineering trades also employment is poor, with 6 per cent. of the Union members unemployed, compared with 5.2 per cent. in October and 5.3 in November, 1902. One of the best reports relates, singularly enough, to the tin plate trade, over which the man of Birmingham shed such crocodile tears when recently orating in Cardiff. It employs 18,000 men, and there was one more mill at work in the end of November than the month before, the total being 360. This, however, is 28 mills fewer than twelve months back, but the position of the pig iron industry is about as bad, and altogether the Department is quite right in reporting that a general falling off is shown, the percentage of unemployed Trade Union members continuing higher than the mean percentage for the corresponding month in the past ten years. So much for the effect of administrative extravagance and the devouring waste of the nation's substance.

The C. F. B. and Costa Rica.

As readers may know, we have always had a profound admiration for the Council of Foreign Bondholders and its *meneurs*. They are so thoroughly friendly in their dealings with defaulting debtors and promoters of *l'entente cordiale*

in a new way which must have among other effects a levelling tendency—creditors all reduced to the same plane of poverty. Whenever a Central American state, or the Turk, from motives of advanced patriotism, suspends payment on its, or his, debts due abroad the goodwill of the Council is at once enlisted on the side of the debtor. "Trust us," its controllers appear to say, "and we will make things as easy for you as we can." Just look with what delicate consideration it is now treating Costa Rica the ever-defaulting. By help of the Council a compact was patched up in 1897 between this state and its European creditors promising 3 and 2½ per cent. respectively on the "A" and "B" categories of the debt. It was a fine arrangement for a gentleman named Kattengall, and not quite a bad one for the Council in the "penny fee" sense, though it only got £5,000 against his £26,562 odd, but the bondholders took little by it, for after submitting to a heavy loss of interest and capital they are now again minus interest. Costa Rica has once more suspended payment, opening the way for fresh adventures and Kattengalls, and the bondholders have only one consolation. They can again call their paper 5 per cent. bonds if they like. It was provided in the 1897 deed of composition that should the reduced interest be in default for a complete half-year the bondholders were to revert to their former position, just as if there had never been any Kattengall or any 1897. They become once more entitled to claim 5 per cent. on the debt due to them instead of 3 and 2½ per cent. Default occurred last April but the Council of Foreign Bondholders has taken no steps to have the quotations for Costa Rica bonds correctly entered in the official list of the Stock Exchange, and that body itself is never supposed to take the initiative in anything for fear of offending the managers. Why this supineness on the part of the Council? "Oh, it is negotiating with Costa Rica for a new agreement." So we hear, and plainly it is much more to the advantage of Costa Rica that a new scaling down and hocus of the creditor should start from a 2½ and 3 per cent. platform than from a 5 per cent. one. Does the end in this instance justify the means?

National Bank of Scotland.

Comparison of the figures of this large Scotch bank for the two years ended October 31 last does not yield much illumination. The balance-sheet for the past year has just been issued and shows a decrease of nearly £25,000 in the profits. This, however, is reduced to a decrease of £17,307 when the balance brought forward is added in, that being £32,385, and the net decrease is thus insufficient to affect the dividend, which is again 20 per cent per annum, including the extra dividend or bonus of 5 per cent. now paid for the second time. Previous to 1902 the bonus was only 3 per cent. This dividend takes £200,000 all told, payable half on January 12 and half on July 12 next, tax free. Then £30,000 is written off the price of Consols held to reduce it to 85, a most commendable step, and a balance of £35,078 is carried forward. A year ago, however, not only was £30,000 placed to reserve, raising it to the figure of £1,030,000, at which it now stands, but £20,000 was bestowed upon the officers' pension fund, so that in reality £20,000 less is utilised from profits this year. The balance-sheet figures show few changes of much importance, but deposits are down about £105,000 to £15,911,345. Cash is also lower by £50,261 at £1,559,364; that is to say gold and silver coin, notes of other banks, and cash with the Bank of England and other London bankers, an item that ought long ago to have been separated up. The note circulation has also fallen off by nearly £25,000 to £906,739. It still, however, amounts to a large total, and we should like to know what the proportion of gold and silver coin held against these notes may be. Acceptances are less by nearly £28,000 at £697,988, a not unwelcome diminution in present times. Amongst the assets, apart from the mixed item of cash and bankers' balances, we find Consols now valued at 85 entered for £1,052,960, a decrease of only £2,900 upon the total held a year back. Are we to infer from this that the bank has been buying during the year? If it has written off less than £3,000 from the value of the stock previously held, it must have been at a low figure twelve months back. Loans at call and short notice are included with the Consol item, but deducting that we get a diminution therein of £519,896, bringing down the total to £3,144,390, still a very respectable sum to be afloat in the London market. Other investments belonging to the Bank include Bank of England stock, Metropolitan Board of Works stock, and other investments, including £2,561 in the bank's own shares at par, and the total under this head is up £60,928 to an aggregate of £2,324,338. So the bank has been investing, we hope to its profit. Altogether in a balance-sheet, which totals up at £19,852,514, £6,521,688 is invested in fixed securities. Then comes bills discounted £1,792,432, an item which shows a decrease of £257,128. Loans on railway stocks and other securities for short periods, that is to say Stock Exchange money, is, however, up £106,289 to a total of £3,114,392, and advances on cash credit and current account have risen by £450,544 to £5,626,384. Neither of these movements appears to us of a healthy description in times like the present when the steady decline in the price of securities must render it extremely difficult for a bank to encounter fresh risks in these directions. Every fall in prices puts added strain upon the borrowers and the greater that strain becomes the higher is the probability that customers will throw a proportion of the securities they have pawned upon the Bank to make the best it can of. Property has been increased by £5,500 to a total of £490,000, but no mention is made in the report of the reason for this increase. Indeed, the report contains nothing whatever, as is the fashion with Scotch banks, one may say with all banks, but there is little else specially to criticise in the figures before us. We can only lament that they throw so little light upon the bank's position.

Commercial Bank of Scotland.

This Scotch bank has also done well as far as we can judge from the report, and is able again to distribute a 20 per cent. dividend for the year ended October 31 last. Half that dividend was paid in July last and the other half is due in January, so that the Commercial does not, like so many of its neighbours, begin its new year with a whole twelve months' dividend in hand. However, its profits amounted to £231,576, or only £14,090 less than those of the previous year. Adding in the balance brought forward of £22,408, the total amount available for distribution is only £253,984, or a decrease of £23,424. It follows that something must have suffered, especially as the directors announce that the bank's holding in 2½ per cent. Consols has commendably been written down from 90 to 85 by transfer from the fund for losses and contingencies, a fund whose existence is not disclosed by the balance-sheet. Taken from that source, however, this writing down would not affect current profits, but we find that only £20,000 has been "provisionally" contributed for the past year to the officers' pension reserve fund, against £50,000 a year back. Premises, however, get £5,000 by way of writing down, the same as before, and it may be mentioned in passing that the total reduction in that item compared with a year ago is nearly £6,000. How this comes about we do not know. After this a balance of £28,984 is left to carry forward, or an increase of £6,576. The balance-sheet figures total up to £17,705,349, of which £2,000,000 is represented by capital paid up and reserve in equal amounts of £1,000,000. Deposits at £13,977,332 show a decrease of £320,663, the bank thus following the natural and inevitable law which forces this item in the balance-sheet down as the securities, out of which so much of it is created, decline in market price. Note circulation has also fallen off by £63,661 to £1,039,126, and a decrease of this description may indicate diminished trade, increased poverty amongst the people. Acceptances, however, have risen £140,161 to £247,600. Coming to the assets we find "cash" of the usual higgledy-piggledy description—specie, and balances at the Bank of England and other banks—down no less than £147,587 to £995,420. Notes of other banks and cash documents in hand and in course of transmission is an item that has also declined by £165,118 to £747,097, so that the total ready money, if we may

call it that, in possession of the bank is less by £312,705 than it was a year ago. Call and short notice money has also shrunk, but only by £40,529 to £2,424,577, and British Government securities held have shrunk by £60,161 to a total of £1,123,197. How much of this is Consols we are left to conjecture. Other investments, including Indian and Colonial Government securities, Bank of England stock, debenture stocks, etc., at £2,126,799, have shrunk by £108,623, but there is an increase of £69,072 in the bills discounted, which aggregate £3,130,022. Short loans are less by £82,060 at £2,594,537, but advances on current account, etc., are up by no less than £780,070 to a total of £3,804,257, and we should like to have some explanation of this remarkable increase in times like the present. It is no doubt the duty of a bank to assist its customers by every means in its power when times of stress and adversity come upon them, but this increase at the present time seems excessive. The remaining items are of comparatively small significance, but it may be noted that the total value of the freehold and other premises owned by the bank is still £506,000; much of it, however, yields rent. As far as we can judge everything is clean enough.

British Electric Traction Co., Limited.

At this period of the year the directors evidently consider it their bounden duty to do all that in them lies to set their shareholders' minds at rest and enable them to enjoy their Christmas festivities with a tranquil mind. Accordingly these gentlemen issue what they are pleased to call an "interim report," and as their efforts are not trammelled by anything in the shape of accounts they are able to administer a large dose of soothing syrup in the shape of smooth words. "Traffic receipts of the various associated undertakings on the whole show satisfactory increases," is the way the report leads off, and it is to be hoped that not only is this the case but that a good proportion is retained as net profit, as this company and many of its satellites are in sore need of an improved income if they are to pay proper attention to the urgent necessity for depreciation allowances on their property, not to mention money for dividends. The next paragraph states that during the present year over 50 route miles of new or reconstructed tramways or light railways have been opened for traffic by electric traction on the overhead system, and this is followed by what seems a welcome announcement that the policy of the directors for some time past has been to restrict as much as possible the further capital commitments of the company on new schemes or extensions. Such a policy has no doubt been forced upon the board against their will by the increasing difficulty experienced in placing the issues of various subsidiaries which were offered from time to time, and apparently to a large extent left upon the parent's hands by virtue of its underwriting contracts. Even so, it must have been adopted within a very recent period, as the report contains the information that two Acts of Parliament have been obtained, one authorising Brighton and Shoreham tramways and extensions of the lines to Worthing, and the other for the construction of further tramways in the neighbourhood of Croydon, forming extensions of the existing Croydon Electric Tramways, and completing a network of about 30 route miles. Have these two schemes been suspended for the time being, or do the directors consider that they come under the plan of concentrating the management's attention upon increasing the revenue from the company's present investments? One gleam of comfort, and the only one for which there seems to be any adequate foundation, may be derived from the statement that no portion of the additional debenture capital authorised at the last general meeting has yet been issued. With regard to the company's holdings in undertakings in and around Birmingham, mostly acquired during the abortive attempt to coerce the Birmingham Municipality into handing over the tramways to the tender mercies of the "octopus," the directors content themselves with the remark that arrangements are in progress for the consolidation of these interests. Probably the recollection of failure still touches them too much on the raw to permit of more than a brief reference.

As a sequel to the above announcement regarding the consolidation of interests, the Birmingham and Midland Tramways, Limited, has just issued a circular stating that it has made a provisional agreement to acquire the interests of the B.E.T. in the undernoted companies. The purchasing concern is also one of the family, and the whole arrangement is merely a new scheme to raise much-needed funds. It is proposed to take over 19,747 ordinary and 17,275 5 per cent. preference shares of £5 each, and £46,425 4½ per cent. debenture stock in the Dudley, Stourbridge, and District Electric Traction Company, together with a debt to the B.E.T. of £62,291, and a further unnamed sum for the sale of the Kinver Light Railway to the Dudley Company. Then 9,656 ordinary and 7,961 6 per cent. preference shares in the South Staffordshire Tramways (Lessee) Company, 53,602 ordinary shares of £5 each (£1 paid), and 20 preference shares of £5 each in the City of Birmingham Tramways Company, and 19,950 ordinary shares of £5 each (200 5s. paid), in the Wolverhampton District Electric Tramways, and a debt of £161,414 due to the B.E.T. by the last named are also acquired. All these total up to £695,827, yet the B.E.T. takes as part consideration no less than £760,000 in cash, and even though it applies for 20,523 preference, 15,477 preferred ordinary, and 35,000 deferred ordinary shares of £10 each in the Birmingham and Midland, it stands to clear £50,000 in cash, in addition to retaining a controlling interest. In order to provide the necessary funds, the company seeks to increase its share capital from £500,000 to £1,050,000, and to alter the rights of the shareholders, so as to convert the present 5 per cent. preference shares into 5½ per cent. cumulative preference and the present ordinary into 7 per cent. preferred ordinary. The directors also seek power to issue debentures or debenture stock up to £525,000. As it stands, the scheme is no doubt an ingenious one, but the B.E.T. seems to be the principal one to benefit, and we should recommend the shareholders in the Birmingham and Midland to give it very careful consideration before accepting it.

South Durham Steel and Iron Company.

A little financial genius is a very valuable attribute in these days of company over-capitalisation, and the directors of the South Durham Steel and Iron Company are to be congratulated on the exceedingly neat manner in which they propose to hide up the unpleasant fact that the business was sold to an unfortunate public at three or four times its true worth, taking one year with another. When one poses as a leading light of the promoting world, it is such a nuisance to have been responsible for, and still preside over the destinies of a concern whose shares, originally costing the unhappy purchaser £1, are knocking about almost unsaleable at a few shillings. So what more simple than to merge the whole affair into an undertaking having no public existence, and whose doings never saw the light of day? Never mind if the terms are inadequate, so long as sufficient voting power can be controlled to carry the thing through, and the history of the whole business obliterated from the investors' mind. This in effect is the procedure proposed for the South Durham Steel and Iron Company. It is a Christopher Furness promotion, formed in the early part of 1900 and capitalised on the strength of the then prevailing iron and steel inflation. While the boom lasted a fair measure of success attended the company's efforts, and a couple of 10 per cent. ordinary dividends were declared; but when prices fell to a normal level and later business began to get somewhat depressed, the waterlogged condition of the concern was laid bare, works were closed down and preference dividend fell into arrear. Inevitably these incidents were followed by a severe slump in the market value of the company's securities, until the £1 preference and ordinary shares were difficult to realise at 9s. and 6s. respectively. Clearly things could not be allowed to go on like this, so in order to get rid of such ugly-looking and suggestive quotations, Sir Christopher Furness, as chairman of the Weardale Steel, Coal and Coke Company, induced himself to take over the whole show. It appears that the Weardale Company possesses the entire share capital of the Cargo Fleet Iron Company,

owners of ironstone mines, limestone quarries, blast furnaces, and freehold land with deep water river frontage at Cargo Fleet. Something like £1,000,000 is being spent on modernising the mines and blast furnaces and executing other works. No one outside the charmed inner ring knows anything whatever about the history of the company, but "with a view of uniting the interests of the two companies," the South Durham directors have arranged an exchange of their shares and advise the mere ordinary proprietors to do the same. The terms are 12s. 6d. per share for the preference shares, including accrued dividend to December 31 next, and 8s. per share for the ordinary shares, the consideration in each case being payable in fully paid ordinary shares of the Cargo Fleet Iron Company. From this it will be seen that the preference holders receive little more than 50 per cent. of the nominal value of their shares, and are called upon to sacrifice their preferential rights as to interest and dividend. Nor is this the worst of the matter, because the capital of the Cargo Fleet is to be enormously distended, with heavy prior charges, and no one can have any idea of its ultimate earning capacity. At present the authorised capital is only £200,000, but when the fusion trick has been performed it will be £1,500,000. To begin with there is £287,500 for the South Durham exchange, and the Weardale Company receives £350,000 in satisfaction of cash advances. Then £162,500 will be provided for working capital, and £500,000 4½ per cent. debenture stock created to redeem an existing issue of first debentures and provide for the completion of the scheme for the manufacture of finished material. The directors say they have all agreed to exchange their holdings on these terms, but is it not a fact that the board's interest consists almost entirely of ordinary shares? These, it will be noted, get no less than 8s. per share, or only 2s. 9d. less than the preference when the dividend of 1s. 9d. per share is deducted. Such terms by comparison are generous to the point of lavishness, and small wonder that several preference holders have protested vehemently against the manner in which they are treated.

A Man of Wrath.

It is a long time since a letter like the following reached the Investors' Review office. Some years ago such were only too numerous—hot and furious, minatory, and often dominated by the sentimental bloodthirstiness of the official "man of God." We kept a selection thinking that, perhaps, they might come in handy at the inquest, but the writers of them need have no fear now of their publication, for we bear no malice. Obviously the writer of this note has been hurt somewhere, and we only hope it is not in his connection with Ebbw Vale and its miserable story. As he does not tell us where the pain is, we can neither moralise nor condole, but perhaps the publication of his letter will give the needed relief to his feelings :—

To the Editor of the Investors' Review.

20, Cwrt-y-Vil Road,
Penarth, Glam.,
December 12, 1903.

Dear Sir,—I have taken your paper in for the past two years, and but for the gutter-rag language that you are so addicted to which reduces your influence about cent. per cent., appreciate it as being different to the shop-bought general run of financial papers.

You are quite wrong about the Boers beating us though, and I cannot admire your dislike to your own country, so often expressed by sympathy with her national and essential enemies.

This is all beside the question though. What an awful hash you've made this week of your attack on Brailsford, of the Ebbw Vale! He gave you opportunity enough, for he has talked enough nonsense about English iron trade being "wiped out in a few months," etc., and a comparison of his recent remarks to shareholders and Chamberlainite letters to the *Times* and elsewhere is amusing. You, however, have disp'ayed an ignorance of current news (and that financial news), hardly excusable in the Editor of the Investors' Review."

Is it possible you know nothing of the sensible reduction of Ebbw capital that has recently taken place with no little noise and commotion? Have you really never read Bell's reply to Brailsford in the *Times* of last Thursday week (I give the date from memo'y), that you could not have gone for Brailsford with a whole bagful of your very best or rather worst gutter style?

I really yearn for Brailsford's shoes to reply to your page 697, for you have given h'm a chance and no mistake.

The unfortunate part of the affair as far as I am concerned is that your muddle of this matter, which I know something about, rather shakes my faith in you when you talk of matters I know nothing about.

Brailsford has not shone lately, but neither have you—in this case—have you?

Yours very truly,
R. Geo. Laws.

New South Wales Railways.

The Agent-General for New South Wales submits, with his compliments, the report of the Railway Commissioners for the quarter ended September 30, and although the results during this period were not particularly satisfactory, the Commissioners indulge in some optimistic utterances regarding the future. Let us trust they will be justified by events. Total revenue on 3,138 miles of line is returned at £757,832, or £31,139 less than in the corresponding period of 1902, but it is expected that this decline will be the last of the ebb tide caused by the drought which has wrought such havoc throughout the colony these past eight years. We are assured that every indication points to a flood tide of business for the next and following quarters. Working expenses for the three months under review could be lowered by £13,568 only, and the ratio to income was the tidy one of 72 per cent. The quarter, however, is one of the slackest in the year, wool, upon which the railways largely depend, coming in principally in the October-December quarter, and the grain in January to March. Passenger business also is greater as a rule in the two intermediate periods. The outlook generally is described as promising, the present season being the most favourable experienced for many years, and a record harvest is talked of with corresponding expansion of the railway receipts. Last year practically there was no harvest owing to the drought, but in the current twelve months wheat alone is expected to yield something like 20 to 25 million bushels, giving a large balance for export over-sea. We shall be pleased to buy it at the old rates. The Railway Commissioners also control the colony's tramways, which show increased earnings of £18,940 at £185,840, with a rise in expenditure of £15,711. Number of passengers carried on the 125 miles open was 32,000,000, and evidently the tramways are very popular.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Ayrshire Gold Mine and Lomagunda Railway Co., Limited.

Out of a capital of £550,000 in £1 shares, 337,500 have already been issued, 62,500 are held in reserve for the conversion at £4 per share of the £250,000 5½ per cent. first mortgage debentures, and 150,000 were this week offered for subscription at £1 2s. 6d. per share. The company owns 110 claims in Rhodesia with some 6,000 acres of land, buildings, plant, machinery, etc., and a railway about 83 miles in length connecting the mine with the Rhodesia railways at Salisbury. According to the latest report this line has been worked since October, 1902, by the Mashonaland Railway Company, and between that date and June 30, 1903, earned a working profit of £1,813. Crushing at the mine it is hoped will be commenced in July next, by which time the development will be two years ahead of the mill, but in the meantime funds are required to repay advances, to complete the erection of the stamps and provide additional machinery, etc. The present issue has been underwritten for a commission of 2s. 6d. per share, and as preferential rights to allotment are given to existing share and debenture holders in the first place, and after them to the share and debenture holders of the British South Africa Company and the shareholders of the Loma-

gunda Development Company, the general public need not bother their heads with the matter just yet.

GRAND HOTEL, HARROGATE, LIMITED.

The National Provincial Development Co., Limited, having built this hotel, which from the description appears to be thoroughly up to date with motor garage and all the rest of it, is now anxious to dispose of the whole affair, and is willing to accept £175,000 in cash and £50,000 in shares for the hotel and a villa, with fittings, furniture, etc., although the fair market value of the property alone is said to be £220,000. When the hotel was opened for business is not stated, but the company takes it over as from August 1, and the takings for the three months from that date are given as £13,649. No estimate of profits is ventured upon, and it is upon these meagre particulars that the promoters have the impudence to invite subscriptions for the whole of the share capital of £150,000 in £1 shares, and 1,500 5 per cent. first mortgage debentures of £100 each. So sanguine are they of success that they have dispensed with the services of underwriters which might have proved costly, but unless local support is strong they are likely to be disappointed.

THEATRE ROYAL, BIRMINGHAM, LIMITED.

The objects of this company are concisely put forth in a single sentence, to the effect that it has been formed to rebuild the Theatre Royal, Birmingham, for which purpose the capital has been fixed at £55,000, divided into 50,000 preferred ordinary shares of £1 each, entitled to a cumulative preferential dividend of 6 per cent. per annum and half the surplus net profits available for distribution, and 5,000 deferred shares, also of £1 each. In addition, there is an authorised debenture issue of £35,000, carrying interest at the rate of 5 per cent. per annum, and 34,000 of the preferred ordinary shares and £15,000 of the debenture bonds are now offered for subscription at par. The cost of building and equipping the theatre ready for opening is estimated at £52,000, and arrangements have been made for the building, which include provision for the issue of £18,000 in debentures as part payment. Then Mr. Bolton, the present lessee of the site, gets £9,500 in preferred ordinary shares as a premium for transferring a portion of the lease to the company, and £12,100 in various forms is paid out for services rendered and outlay incurred in the promotion and formation of the company, and after providing for interest on debentures and ground rent during the building the promoters estimate that they would have a balance of £12,450 available for working capital, underwriting, etc. Mr. Tom B. Davis, who becomes managing director for six years at a salary of £500 per annum, in addition to his directors' fees, estimates that a profit of £14,700 will be earned, of which it is calculated £5,120 would be left after meeting all outgoings and the dividend on the preferred ordinary shares. The enterprise may be legitimate enough, but it appears to have been started with a view to promoters' profits, and is certainly overcapitalised.

FOXTON CEMENT CO., LIMITED.

This company has been formed to acquire about 93 acres of freehold land, with an option on about a further 96 acres, near Cambridge, and to erect thereon works with the most modern machinery and appliances, capable of producing about 500 tons per week of first quality Portland cement. The share capital is £60,000 in £1 shares, of which 30,000 are offered for subscription, with 20,000 5 per cent. first mortgage debenture stock, and 25,000 of the shares have been underwritten for a commission of 10 per cent. As the vendor bought the properties for £15,800, and asks £15,000 in cash, £20,000 in shares, and £5,000 in cash or shares for them, and for various services rendered, he stands to make so thumping a profit that it is little wonder he has chosen to hide away the terms in a mass of small type. Estimates of profits are of course rosy enough, but vague, and merely consist of a statement that these will be sufficient after providing for debenture interest, management expenses, depreciation, and reserve to pay dividends of 10 per cent. and upwards. There is no evidence put forward to check these calculations, and, notwithstanding the success of two local companies paraded as an inducement, we are doubtful on the point.

Passing Events.

It is not worth while following in serious mood the utterances of the ex-Colonial Secretary at Leeds, or indeed anywhere else. He is a mere mountebank, who speaks only to tickle the ears of the groundlings, and is so absolutely regardless of truth, even of common political honesty, in his utterances that it is waste of time and ink to deal with them at large. The only point of the slightest interest is his, perhaps unconscious, intimation to all and sundry that he now deems himself the real dictator—an uncrowned emperor—by whom nation and Cabinet and all are ruled. In that capacity he desires to have a "commission of inquiry" instituted, "unofficially," as an ornament and offshoot of "Consistent," Birmingham. If he imagines that the country can be made to accept as conclusive and reliable any compilation whatever got together by men in the service of that factory of shoddy statistics and antediluvian political economy, he will have cause for sorrow. But does he already know, rhinoceros though his hide be, that he has failed, and will be cast out? If not, why this other proposal that he should be sent on a tariff touring mission to bring home "treaties." Yes, he bought a £30,000,000 "treaty" from Johannesburg, and where is it?

Russia's reply to Japan has done little to calm the troubled waters of the Far East, for it is alleged to be in many ways an unsatisfactory document. No allusion is made to Manchuria or Russia's aims and ambitions there, while with regard to Korea the Czar's ministers are said to refuse to give up their right to move troops across its northern portion. This right they declare they must have, since it affords not only an alternative means of access to Port Arthur, but also gives direct communication between that fortress and Vladivostock. Coaling stations on the Korean coast are also indispensable to Russia if its predominant position in the Far East is to be maintained.

It would seem as though these rumours are substantially correct as the Japanese Government has refused to accept the note, though willing to re-open the negotiations. For if these demands were granted it would mean that Russia's influence in Korea would be paramount and a standing menace to the Island Empire checking her development and hindering her progress. At the same time the desire of the Mikado and his ministers to avoid war if possible is shown by their offer to again resort to diplomacy for a way out of the deadlock, and we can only hope they will succeed.

For pure unadulterated insolence commend us to the United States when engaged in a dispute with a weaker nation. The Federal Government heard tales of Colombian troops being sent to Panama, so promptly despatched a cruiser to the Gulf of Darien. When it arrived General Ortez protested against its presence and asked that a boat it landed should at least fly the Colombian flag in the bows. Neither request was heeded, and no steps were taken to enforce them. The Americans calmly completed their reconnaissance and returned to the cruiser, which then sailed for Colon. Such proceedings are in direct violation of all canons of international law, and savour strongly of the bully. But this seems to be the rôle the States desire to play in the world's politics.

Half a Gurkha regiment, a whole one of Pioneers, a company of Madras Sappers, a section of British Artillery, a couple of seven-pounders and a machine gun with a few other details, and you have a "peace" mission, according to the ideas of the Indian bureaucrat. This is the little force that has been sent into Tibet to teach the ignorant Lama the beauties of our friendship, and if he and his subjects show a disposition to turn nasty the lesson will be rammed home with a shell or two. Already Col. Younghusband and his men are over the Tibetan border, having crossed the Jelep Pass and arrived at Rinchengong, so far unmolested by the native officials both Chinese and Tibetan. The climate, however, is not so kind, and the question of transport will prove a hard one to solve. Snow-filled passes and a thermometer marking 36 degrees of frost are not trifles, and to make matters worse disease has broken out among the bullocks and the yaks. But what

does Calcutta care about the misery and suffering the troops will have to undergo provided they win "glory and fame" of a kind for a few comfortable officials, and titles and promotion for the officers. To the natives of India the cold means excruciating suffering and death.

Amusing utterances often come to us from colonial politicians, who are generally described as "statesmen," upon the great tariff and imperial unity question suddenly brought into prominence by our ex-Colonial Secretary. One of these strange deliverances was made at Toronto the other day by Sir Richard Cartwright, Minister of Trade and Commerce in the present Dominion Administration. There was good and not so good in Sir Richard's speech, as might be supposed, for he is rather a superior man. "If Mr. Chamberlain designs simple protection," said Sir Richard, "I have nothing to say for him; if he aims at reciprocity, I have a great deal to say in his favour." And why does he want reciprocity? In order to get the power of Great Britain behind the Dominion in an effort to break down the United States tariff. This is all very well, and perhaps commendable, but could not the Canadians, by dropping their aggressive and insolent demeanour towards the United States, bring about more friendly and profitable trade relations between that country and their own without any help from us? Why should we lay burdens upon ourselves in order that Canada may with our help and at our cost sweep away the consequences of her own folly. "I desire a British Zollverein," said Sir Richard, "as a step in the direction of a friendly alliance between Great Britain, Canada, and the United States." Let us have a war, in other words, "in order that we may get peace." This is the old cry of the Jingo in a new form. Coerce your enemy to love you. Well, and will the Canadian people take up part of our burdens, and help us to bear the blighting cost of our naval and military establishments? Reciprocity must not be one-sided.

After considerable debate, the German Reichstag has agreed to the proposition of the Imperial Government that the trade relations between England and her dependencies and the German Empire shall remain on their present footing for another two years. This means that Canada will not be attacked in the manner our protectionists have been describing or desiring, that Germany, in fact, treats the fulminations of the Jingoes here and in the Dominion with a cold contempt, thanks to which Great Britain and her colonies are to remain endowed with the most favoured nation treatment in Germany. We hardly deserve this generosity; all the more reason therefore why we should be thankful to have it bestowed upon us.

In the current number of the *New Age* there is a remarkably instructive article on smuggling, from the pen of Mr. Alfred Marks. He has been digging into the past history of our foreign commerce, as recorded in many a Blue-book and official statement, and has got together a few striking facts. We trust he will pursue this branch of inquiry to the enlightenment of the community. Smuggling, he points out, has been described by economists as the agency which prevented the destruction of international trade, and for more than a century it played an important part in the nation's life. For a long time in the latter part of the eighteenth century, and beginning of the nineteenth, smugglers were very powerful, carrying on their business in vessels of from 30 to 300 tons, armed with from six to twenty-four guns, fighting and beating the Government cruisers if necessary, and materially reducing the yield of the taxes. It 1784 it was calculated that smuggling alone cost the revenue £2,000,000 out of a total of little more than £15,000,000. There cannot be the least doubt that were a protective tariff re-imposed here smuggling would revive and become more rampant than ever. It is now the curse of all tariff-shackled nations, and renders their trade dishonest to an extent to which we who are free, or comparatively free, can form no conception.

Labour has had a tremendous triumph in the general elections for the Australian Commonwealth, and the Ministerialists have had a disastrous defeat. In the Senate there are thirteen Labour members, five what may be called regular Opposition members, and only one Ministerialist, while in the House of Representatives Ministerialists are only twenty-nine, against twenty-two Opposition and eighteen Labour members. We rather think that this eruption of the lower grades of society, effected it is said mainly by the help of the female vote, will have considerable influence upon the attitude of the coming government towards Australia's foreign creditors. It might, however, act as a great impetus to the borrowing passion, with a view to provide the voters with work.

The attempt to confiscate the property and lands of the Armenian Church in the Caucasus has resulted in the formation of a widespread plot for revolution. As yet the revolutionaries have not gone beyond propaganda, but now it is feared that they are about to resist the confiscation by taking up arms, and if this proves true M. de Plehve's career as Minister of the Interior will likely come to a sudden stop. His general policy can scarcely be described as successful since his reactionary ideas have resulted in the development of Jewish, Polish, Finnish and labour troubles, to which he has now added this Armenian one. With labour beginning to feel its power in Russia, such a policy was ill-timed, unless a general revolution was the goal aimed at, and most statesmen would have preferred to make friends rather than create fresh foes. For when the smash comes the bureaucrats will want all the assistance they can get to save them from the mob.

President Roosevelt has signed the Cuban Reciprocity Bill, and there are prospects of lively times ahead. For we have notified the United States Government that we shall expect the "most favoured nation" treatment for West Indian sugar and France, Germany and Austria are certain to follow our lead in demanding the same right for their beet. But some years ago Mr. Olney, Secretary for State under the Cleveland Administration, by some subtle piece of reasoning, declared such claims were inadmissible, and the precedent then laid down is almost sure to be followed now. So we repeat there are lively times ahead for diplomatists and perhaps warriors.

That was an interesting speech which Mr. Emmott, M.P., delivered at the Oldham Reform Club early this week, especially in the statements made by him about the Sugar Convention. That Convention, he justly says, puts us in the position of harming ourselves by excluding the raw material and leaving the door open to the manufactured article, and he described it as "the most un-English Act of Parliament of which he had ever heard." It is about as mischievous as the tin plate taxation was to the United States, for it was framed to benefit something like 3,600 people, at the expense of 120,000 employed in subsidiary industries. It is a pity this example of the "reforming" zeal of our dictator and his subservient Cabinet is not kept more steadily before the public.

Pleasant stories are circulating about the reforming zeal of Mr. Arnold Forster at the War Office. He is going to get quit of Mr. Brodrick's phantom *corps d'armée*, and to cut down War Office estimates for the coming year by some millions. We hope this news is true, but doubt whether Mr. Forster, able and zealous though he be, has sufficient strength and backing to overcome the mass of opposition certain to be evoked among the devourers by any attempt to save money for the taxpayer.

Will "Consistent," Birmingham, please give us an explanation of the present distress from which the iron and steel industry of the United States is suffering? We have been told this week that the United States Steel Corporation has been compelled to cut down wages to the tune of $15,000,000 per annum, or fully £3,000,000, and in all directions throughout the Union blast furnaces are being blown out, men dismissed, and wages cut down. If this is the real fruit of protectionism and trust monster capitalisation, how is a protective tariff going to prevent the same catastrophes from overtaking the old country?

What is the matter with Camwal, Limited, formerly known as the Chemists' Aerated Mineral Waters Association, Limited? It used to do very well before its capital account was blown out, but things commenced to go wrong after that feat, and the annual meeting this week was held in the strictest privacy. Reports are never sent to the press nowadays, always a sure sign that things are not comfortable, and shareholders will be well advised not to allow matters to drift too far.

As with the Allsopp Company, the few discontented preference shareholders of the Welsbach Incandescent Gas Light Company failed to upset the reconstruction scheme on which so much time and energy had been expended. Mr. Justice Buckley came to the conclusion that the writing down was fair to all parties, and the Court of Appeal has just upheld the opinion in a decision which is to be applauded. The contention of the opposing parties were that the cutting down was too severe, and that the proposal bore harshly on the preference holders. But those familiar with the scheme are satisfied that justice was done to all concerned.

In continuance of its policy of absorbing as many of the northern malt whisky manufacturers as possible, the Distillers Company has just arranged terms for taking over the business of John and Robert Harvey and Co. This undertaking has had a very distressful career, and under the scheme holders of the 1,500 £10 ordinary shares will receive only 7s. 6d. per share, payable in cash, while the 7,500 preference £10 shares will be exchanged for 4,500 Distillers shares of similar class, the exchange thus being on the basis of £6 per share. The Distillers capital is to be increased by £500,000, to £1,600,000, of which £200,000 in preference shares is to be issued now, so evidently some other proposals will shortly be heard of.

The League of Liberals Against Aggression and Militarism, now incorporated in the New Reform Club, has been wise in reprinting from that valuable weekly journal, *India*, a remarkable address delivered before it some time ago by Sir William Wedderburn. It is Pamphlet No. 14 issued by the League, and ought to be in the hands of everybody who really takes an intelligent interest in the empire and its affairs. Our empire, in the real meaning of the word, is India.

We offer our sincere condolences to the economists and people in the United States, who must see ruin staring them in the face, for the exports of the country are going up and the imports going down. It is quite terrible. In November the exports were actually $35,256,000 more than in the corresponding month of 1902, and amounted to no less than $160,456,000, while imports fell off only $8,325,000, to a total of $77,062,000. True the excess of exports over imports was still $83,394,000, compared with only $43,581,000 a year back, but it is not enough even now to compensate the prophets for their country's ruin, or for its reinstatement in the position of the most debtor nation on the face of the earth.

The cotton spinners of south-east Lancashire are apparently endeavouring to get up a sort of international compact against the cotton speculators of the United States, by whose marauding operations on the market they have suffered so greatly in the enhanced price of the raw material. We do not know that their success is to be wished, but certainly action of this kind is a natural, and one might say inevitable, effect of such deeds of brigandage. The proposal is that there should be an international agreement to work short time, with a view to curtail the demand of consumers, and force the hands of the powerful ring that has got control of the supply of raw material.

With the new year comes a new year's gift from the Postmaster-General which, though small, will be welcome enough. A halfpenny postage for book packets is to be then instituted. In fact the designation "book packet" is to be abolished and anything weighing less than 2 oz., sketches, drawings, paintings, photographs, engravings, maps, plans, any written or printed matter not in the nature of an ordinary letter, including invoices, orders for goods, market reports, receipts, circulars, visiting cards, Christmas and similar cards will go all over the United Kingdom for a charge of one halfpenny.

The Corporation of Manchester is seeking power, and will doubtless obtain it, to borrow another £1,000,000 for its gas undertaking, but the market need not be alarmed at the news for the whole £1,000,000 will not be borrowed at once. The Corporation does not cultivate flashy finance in any form, and its gas undertaking is a great credit to it. It is in no sense to bolster up waste that the new money is required, but simply because Manchester is extending and taking in surrounding districts which will require their gas services to be re-organised and completed, works for which the present borrowing powers are insufficient. These amount to £1,700,000, of which £1,499,700 has been borrowed and £416,053 paid back out of the sinking fund. Not only is capital being redeemed in this manner but the gas undertaking is relieving rates at the present time to the amount of £70,000 per annum. These facts are taken from the evidence of Mr. Hobson, the deputy town clerk, before an inspector of the Local Government Board, Mr. H. P. Boulnois, one day this week. It will take ten years to absorb the £1,000,000 now asked for, more than that indeed, for the outlay will go on until 1915.

We congratulate Messrs. Donald and John Ferguson on their success in fighting the libel action brought against them by Mr. C. J. R. Le Mesurier, a former Ceylon civil servant, who has become a Mohammedan, and apparently a large land owner in the Island. Pretty strong statements were made in Messrs. Ferguson's paper, the *Ceylon Observer*, against this gentleman. He was described as "a dangerous and unscrupulous land grabber," and otherwise handled with a freedom which the jury happily considered justified. Mr. Donald Ferguson, in particular, deserves sympathy over this miserable affair, for he had nothing whatever to do with the management of the paper, but all's well that ends well.

The East London Company thought its undertaking was worth £7,248,112, so it asked the arbitrators to filch this nice little sum out of the ratepayers' pocket. But the arbitrators having listened to the company's arguments and those of the Water Board, decided that the conpensation shall be £3,900,000 if the undertaking is valued free from the obligations of the Chamberlain's sinking fund. Should the Court of Appeal reverse the decision as to sinking funds then the amount the Water Board will have to pay will be increased to £4,300,000. Both these sums are stiff, but we must be thankful even for small mercies.

Shareholders of the City of Buenos Ayres Tramways Company are informed that negotiations have been opened with a view to the transfer of their undertaking to the Anglo-Argentine Tramways Company on terms which are said to be mutually advantageous to the proprietors of both concerns. The proposals are favourably regarded by the City of Buenos Ayres directors, and as soon as a provisional agreement has been concluded an extraordinary general meeting will be called for its consideration.

It is stated that the Vatican authorities have decided to withdraw from the London banks the principal portion of the Holy See money, estimated at 20,000,000 lire, deposited here for the purpose of investing it in new 3½ per cent. Italian Rentes, and if the report be true the incident may not be without passing effect on the course of the money market.

The Bulgarian budget for 1904 appears to indicate prosperity, for the expenditure is estimated at 7,000,000 francs larger than in the current year, half of which will be absorbed by the ministry of war, and the extraordinary expenditure is to be 25,000,000 francs, or £1,000,000, for the army alone. We hope this does not imply excessive taxation upon the people, or a declaration of war against Turkey in the spring, and yet into this latter step Bulgaria may very well be driven by the treachery of the great Powers, as they are called, who handle the decrepit Turk as cats might a hedgehog.

And here is the Atchison Company, that most marvellous of all Yankee railroad successes in recent years, so urgently in need of new money that it has sold $10,000,000 of its general mortgage bonds to Messrs. J. P. Morgan and Co. in order to provide for extensions and additional locomotives and equipment. At what price was the sale effected, and will the bonds be offered here?

Mr. Steele, Mr. J. P. Morgan's partner, has told an exculpating story about the firm's connection with the "deal" in Shipbuliding Trust shares. According to this the firm never sanctioned the device in virtue of which Morgan's and Schwab's shares were to be sold first, and never gave authority to anybody to carry it out. The trick was no more than an offer to the firm which was never

accepted, and Mr. Steele "supposed it was dead until it was brought up at the beginning of the present case." This is excellent news and a great relief.

What a lot of money those giant corporations in the United States are seeking after. Here is the St. Louis Terminal Association borrowing $4,500,000, and on all hands the pressure for accommodation on the part of the monopoly railroads and other corporations is greater in the States than that of our municipal corporations at home.

According to the Buenos Ayres correspondent of the *Financial Times*, the Cordoba municipality has finally accepted the latest modified conditions of the London committee for the settlement of the external debt. A new issue, guaranteed by the Provincial Government, for a total sum of £900,000 is to be made, representing the capital and about 16 per cent. of the entire arrears of interest. Originally the bondholders claimed 25 per cent. of interest arrears and have thus compromised on 9 per cent. less. The service of the debt is to be performed in Buenos Ayres, and according to the agreed terms, interest for the first five years will be at the rate of 4 per cent., and for the second five years at 5 per cent., in all cases payable in paper. For the third similar period the interest falls back to 4 per cent., but half will be payable in gold, and the remainder in paper, while subsequently 5 per cent. is to be forthcoming in gold. Amortisation will commence after the first ten years at the rate of ½ per cent. gold. The municipality abandons the existing amortisation fund, amounting to about £3,000, in favour of the creditors for the satisfaction of legal expenses, and as the Argentine Municipal Loans Committee holds a large majority of the bonds, it is said that the matter may now be regarded as practically concluded. We hope so, and trust the Province of Santa Fé will follow the example here set.

A remarkable statement has been made by Lord Wemyss. He says that in the original "inquiry" Blue-book upon our trade there was incorporated the opinion of Sir A. E. Bateman, the able head of the Statistical Department of the Board of Trade, upon the facts therein collected, and that this opinion was cut out by order. If that is true, what are we to think of Mr. Balfour and his Cabinet? Should it be true, we trust that when Parliament meets said Cabinet will be compelled to disgorge.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

Spes. B.—If you are regardful of your future peace of mind you will not invest in any of the securities selected by you. This general caution given, I think the following order indicates as nearly as one can in this rough fashion the relative qualities of a few of them. 20, 18, 6, 15, 1, and 9.

W. A. P.—I do not see much rise in the share you mention. It appears to me to be at its full price at the present time. On the other hand, that is no reason why you should sell a thing that promises to yield a steady income. I am sorry I cannot undertake the work you suggest to me or go beyond what is stated from week to week in the Investors' Review. Many similar requests have been made and I have been compelled to return the same answer to them all.

F. E. D.—I almost think you should sell these shares, for the prospect is not assuring, and I doubt the capacity of the market to lift the price much. You are quite right as to the position of the company.

Glasgow.—It is quite possible that the profits may show a shrinkage, but this company is in a strong position. I doubt, however, if its preferred ordinary shares are worth more than their present price. An investment of this sort should pay a clear 4 per cent. to a purchaser.

D. C.—I do not think you should touch these shares, even at their present low price. The company is grossly over-capitalised, and I doubt if there is really any intrinsic value in the ordinary shares. The business is such that it depends entirely on public caprice. Perhaps the preference might have a chance, but even they are very doubtful so far as real value goes.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

The British Westinghouse Electric and Manufacturing Co., Limited.

The announcement of the final dividend on the preference shares of this undertaking did not precede the issue of the annual report as usual, and the Stock Exchange was quite ready to jump to the conclusion that it would not be forthcoming. Rumours were put about that the American directors opposed its payment, and the shares, which have this year been as high as 6¼, fell to 4¾. Dealers, however, need not have become so alarmed because the hivilend is duly proposed, although it is true that profits were helped to the extent of about £60,000 by "special discounts" allowed by the American Company on the orders executed at Pittsburg. It was felt that these discounts should be made in view of the fact that the Manchester factory could turn out only one-third of the electrical apparotus needed for its orders, necessitating the purchase of the balance from the Pittsburg factories. The assistance seems legitimate enough, though unusual, and with it the profits are returned at £107,609. They provide debenture and loan interest and preference dividend, and leave £1,146 to be carried to reserve. Without doubt the company is building up a splendid business, the orders received during the year to July 31 last being £1,657,114, or £725,114 more than in the preceding year. Inevitably such rapid growth means heavy capital outlay, and the directors intend to issue a further 100,000 6 per cent. preference shares of £1 each. They have also created an additional £450,000 4 per cent. debenture stock, of which £50,000 has already been issued. Capital expenditure in the past year reached no less than £542,535, and we find the company owes £540,839 to sundry creditors, and has raised a temporary loan of £141,250. It has, however, stocks on hand £488,447, debtors £203,376, and cash £122,700, and is therefore less hard up than its rate of growth might have led us to expect. No depreciation has been allowed on the present occasion, as this is the first year in which the company's works have been equipped, but that important matter must receive the closest attention soon, and we almost wish the preference dividend had been left uncompleted this year.

The United Realisation Co., Limited.

It is always with feelings of deep sympathy for the unfortunate people involved that we refer to the report of this Jabez Balfour resurrection, and our commiseration on the present occasion is greatly increased by the fact that the statement is exceedingly disappointing. Those closely acquainted with the position of affairs doubtless expected an unsatisfactory display, because the Hotel Cecil, in which the company is largely interested as almost the sole holder of ordinary shares, reduced its dividend from 3 to 1 per cent. for the year to August 31 last. As a result the revenue for the twelve months ended October 31 was £6,655 less than in the preceding year at £19,605, and as interest on loans and debentures alone absorbed £35,087, and administration and law costs came to £2,900, the deficiency is £18,382 compared with £11,316. Total debit is now £397,421, and although it is useless to criticise the balance-sheet, it may be mentioned that 439,993 Hotel Cecil ordinary shares are valued at £630,975, or probably three or four times their true worth. Other properties are entered at £316,481, and there are sundry small assets not worth detailed mention. On the other side there is the realisation account, being the balance of amounts realised in excess of the book values, which a year ago stood at £110,626, and now amounts to £118,538. The increase is accounted for as to £7,600 dividend on claim against the estate of J. S. Balfour in bankruptcy, and the balance from other sources. As mentioned a year ago the debentures of the company fell due for repayment on June 30, 1903, but arrangements were made with the debenture holders to extend the period for repayment until June 30, 1904, with power to the trustees to extend the time for a further two years beyond that date. These debentures, with the premiums payable on redemption, amount to £569,100, in addition to which there are loans of £51,000 and sundry creditors £19,565. We are very glad to note that in spite of the depression prevailing during the past year, Whitehall Court shows a very satisfactory result, and hopes are entertained that a still further improvement will be shown in the future. Development of the colliery has proceeded satisfactorily, and the new seam is now in working operation, producing excellent coal. Equipment has been provided for a large output, and under favourable circumstances the directors say there is every reason to believe considerable profit can be made. The Realisation Company still retains its interest in the Ilford Park Estates, which is represented by 30,000 shares, but no value is placed against them in the balance-sheet. Sales effected by the Ilford Company during the year were £7,306, but as in the majority the purchase money is payable by instalments, there has only been a sum of £500 available for redemption of debentures, which now stand at £27,000.

Barnum and Bailey, Limited.

People flocked literally in their millions to see the hair-raising performances of Buffalo Bill's Wild West Company, and the milder forms of entertainment provided by the greatest show on earth. The accounts of the company cover a period of 55 weeks to November 14, the show in London running from December 26, 1902, to October 23, 1903, and that in America from March 18 to November 11 of the current year. During this time the gross receipts amounted to the big sum of £401,607, a drop of £14,998, compared with

the previous 49 weeks, but then the circus was touring France, where we know they love such things. Under every conceivable head the expenditure totalled £386,934, but from this must be deducted £40,000 set aside last year for the Olympian installation and £20,000 for wintering expenses in various cities, so that the net outgo was £326,934, and the balance of profit £74,673. To it is added £14,165 brought forwa.d, together with in e.est, transfer fees, etc., and after deducting directors' remuneration, London office expenses, and insurance, the ava.lable sum is £85,929. Out of this the directors allow £10,000 for depreciation of leases and plant in England and America, provide £35,000 for wintering expenses, and again give the ordinary shareholders a dividend of 10 per cent., leaving £14,263 to be carried forward. Capital outlay for the year was very heavy at £81,139, making the total to date £518,139, and on this big sum the only wastage allowance is £10,000 written off premises and plant. We should think the depreciation would be nearer £50,000, quite apart from a sinking fund for the freaks. There is really no guarantee that the stout lady will always remain in possession of a superfluity of tissue, or that the living skeleton will not one of these days begin to put on flesh. Besides one or two of them might die, or the whole lot go out of fashion. It should be mentioned, however, that a year ago £50,000 was placed to reserve to provide part of the mentioned capital expenditure, and that the total savings reach £150,000, the balance consisting of share premiums. Creditors continue very small, but cash is down over £95,000 to £109,754.

The Bolivar Railway Co., Limited.

The report of this unhappy undertaking for the year to June 30 informs shareholders that the revolution referred to in the last annual report continued during 1902 and the first half of the current twelve months. It was finally suppressed by President Castro in June last. During a temporary lull in hostilities in the autumn of last year the company managed to do a little business, and reports a gross revenue of £13,487, which unfortunately cost £13,860 to earn. This means a loss of £373, and after allowing for debenture interest and sundry other charges, and deducting one or two small credits, the total loss was £15,216. The adverse balance brought forward being £17,984, the total debit to date is £33,201. Happily since June last the railroad has been in continuous operation, the earnings for four months to the end of October being £30,944, and the director were able to resume payment of interest upon the debenture stock on September 1 last. Prospects for the future are described as encouraging. The coercion and battering of Venezuela by this country and Germany are now a matter of history, and culminated in certain protocols, which provided for the examination of claims in dispute by mixed commissions, to sit in Caracas. The final award of the umpire of the Anglo Venezuelan commission has decreed the amount to be due to this company as £48,681, against a claim of £7,000, the items relating to forced services requisitioned by the revolutionary troops in the recent rebellion being disallowed, notwithstanding that precisely similar claims made by France, Germany, and Spain were allowed by the several adjudicators. The question whether the funds from the hypothecation of Customs revenue shall be preferentially assigned to English, German, and Italian creditors, or distributed among all claimants, has been discussed before the Hague tribunal, but as yet no decision has been given.

Isle of Thanet Electric Tramways and Lighting Co., Limited.

This company did not do quite so well during the year ended September 30 as might have been expected from the results of the previous eighteen months, and the directors, with good reason, ascribe the falling off in receipts to the inclement weather experienced. Revenue from traffic amounted to £33,465, or a decrease of £1,623, and with sale of electricity, advertising, and other receipts, the total income was £34,678, of which expenses absorbed £16,804, and £4,727 was spent on maintenance of rolling stock, permanent way, etc., audit fee took £42, and directors' fees £800, these gentlemen having waived £300 of the sum divisible amongst them, leaving a sum of £12,305 available. Interest on debenture stock and loan, preference dividend, and other charges, however, required £15,708, so £3.403 was taken from the amount brought in to make up the deficiency, and this balance was also drawn upon to meet compensation claims and other charges incurred prior to this year to the extent of £1,853, while another £500 was written off improvement of cars, reducing the sum carried forward to £5,048. The auditors call attention to the fact that no depreciation has been written off the property, which is valued at £455,512, exclusive of about £30,000 for such items as additional electrical equipment and traction cables, rolling stock, electric light installation, etc. In January last the supply of electric light to private consumers in Margate was commenced, and as the business both at that place and at Broadstairs is showing signs of rapid expansion, we trust the directors will be able in the near future to see their way to make ample provision for depreciation and reserve.

The Chicago Breweries, Limited.

American brewery affairs are indeed looking up when one of the unfortunate English proprietary companies contrives to pay a 5 per cent. ordinary dividend, and shareholders in this undertaking must be thankful in their choice of the best of a bad lot. The accounts are made up annually to November 30, and in the past twelve months the dividends declared by the American companies amounted to £40,096, while £7,768 was received from other sources, making £48,764, or £3,588 more than in the preceding year. General charges ran up sharply to £3,725, but a good deal of debenture redemption took place within the period under review, and there was a saving in debenture interest of £2,124 at £21,606. Therefore, after providing a slightly larger sum for income-tax, the net balance is £22,375, against £17,868, and the directors are enabled to raise the dividend from 3 to 5 per cent., besides increasing the amount carried forward from £15,118 to £18,521. The company holds shares in two breweries, and the sales for the past year were 243,523 barrels, or 13,783 barrels more than in the preceding year, the trade in the special products manufactured being very satisfactory. Within the year debentures to the amount of £55,500 have been purchased, and £68,300 were cancelled, making the total extinguished to date £80,100, and leaving the outstanding debt at £319,000. Nothing is told in the report as to the financial position of the American concerns, and all we know is that £22,966 was charged in America for repairs, renewals, and depreciation, and that bad debts came to £4,822. The English company possesses a reserve of £38,052, and owes only £2,141 to sundry creditors. On the other hand, debtors come to the trifle of £51, but there is the big sum of £127,845 out on loan.

Bartholomay Brewing Company (of Rochester), Limited.

The stereotyped phrase that the quality of this company's beer is universally conceded as unsurpassed again makes its appearance in the report for the twelve months ended September 30, but with a little more justification for it than in either 1901 or 1902. Sales during the period amounted to 215,731 barrels, compared with 206,641 barrels in 1902, but were still substantially below those of the two preceding years. After providing £30,707 for repairs and depreciation, and meeting head office charges, the balance of profits earned by the American company came to £36,084, from which was deducted the debit balance of £5,214 brought in, and debenture interest having been met a dividend of $40,000, or £8,214, was declared leaving £1,656 to be carried forward. To this dividend the English company added £467 for interest and transfer fees and £1,508 for income-tax over reserved, making a total of £10,189, of which £1,425 was absorbed by London office expenses and loss on exchange, £1,269 was applied to wiping out the debit balance brought forward, and a dividend of 4s. is declared on the preference shares, leaving £55 to the new year.

City of Chicago Brewing and Malting Co., Limited.

The sales of beer by the Chicago Consolidated Brewing and Malting Company, the American undertaking, during the twelve months ended September 30, only increased by 4,247 barrels to a total of 388,962 barrels, compared with an advance of 34,191 barrels a year ago. Thanks, however, to slightly cheaper materials and the repeal of the war-tax, the results of the trading were decidedly more satisfactory, and net profits, after providing for debenture interest, £25,366 for depreciation and £19,630 for repairs, amounted to $118,089, or £24,248, compared with £10,427. Dividends were declared of $100,000, or £20,534, of which the English company's share came to £20,532, and with £49 brought in, and £39 from transfer fees, the balance available, after deducting London office charges, was £17,688, enabling the directors to pay a dividend of 5s., or 2½ per cent., on the preference shares, and carry forward £2,112. The amounts carried forward in England and America together came to £32,539. While the result is an improvement over that of the preceding year, it is not much to boast of, and the directors are evidently apprehensive that even this level cannot be maintained as they complain that several new local breweries have been erected, and the keenness of the competition renders it increasingly difficult to maintain prices.

St. Louis Breweries, Limited.

Mr. Otto Stifel, late president of the American company, having evidently come to the conclusion that he would do better as a brewer on his own account, purchased a competing concern, but apparently has not been able to injure the company's trade to any great extent. The directors are pleased to announce that, although some loss of trade has accrued owing to his defection, yet the amount of such loss is not as much as might have been anticipated, and several customers have already returned. Sales during the year ended September 30, however, were indirectly affected by the extensive floods in and about the City of St. Louis, and by the strikes of teamsters and freight handlers, but still showed an advance of 8,162 barrels to 688,467 barrels, and as prices of brewing materials were slightly cheaper the profits, after charging debenture interest and £17,241 for depreciation, came to £77,744, or an increase of £16,974. Adding in the sum brought forwa.d, the total available came to £104,623 and dividends amounting to £76,277 were declared, leaving £28,346 to be carried forward. The English company's proportion of this was £76,256, and with transfer fees gave a total of £76,308 against £60,119 a year ago. London office expenses absorbed £2,828, or £239 less, and including £7,256 brought in the disposable balance was £80,736, out of which a dividend of 16s. per share, or 8 per cent., is paid on the preference shares compared with 6 per cent. in 1902, and £8,736 is carried forward.

St. Pauli Breweries Co., Limited.

Once more the old excuse for declining profits—the exceptional increase in supplies for South Africa and China during the years 1900, 1901, and 1902—is trotted out by the directors to account for the further shrinkage in the twelve months ended September 30, but it is by no means an adequate one. Sales dropped to 70,307 hectolitres compared with 75,443 in 1902 and 79,365 in 1901, when high water mark was reached, but they were 3,942 hectolitres above those of 1898. Profits on trading also showed a heavy decrease on last year at £20,706, and the balance before deducting de-

preciation, including the sum brought forward, was £3,138 down at £15,232. Depreciation having been written off, the net profits came to £13,104 against £15,294 and £18,007 in the two preceding years, and £14,877 in 1898, that is to say, that although nearly 4,000 hectolitres more were sold than in 1898, there was a falling off of £1,773 in profits. The allowance for depreciation was augmented by a special sum of £1,065, but even then was only £308 more than a year ago at £6,569, while nothing was added to reserve, against £674 transferred at that time, yet the ordinary shareholders get a dividend of only 2 per cent. compared with 5, 7, and 5½ per cent. in the three preceding years, and £363 is carried forward. It is in the company's favour that, expenditure on extensions having been moderate, the amount written off property account has been effective in reducing this item by £4,825 to £227,509. Stocks have risen by £775 to £48,324, and cash and bills are £4,245 up at £14,563, in consequence of a decrease of £3,222 to £40,237 in sundry debtors, and against this there is a small reduction in the amounts due on loans and bills payable and to sundry creditors.

New Tamarugal Nitrate Co., Limited, and Reduced.

Last year's profitable business proved after all an exceptional experience, and for the twelve months ended July 31, the gross profits on trading, even with the help of a favourable exchange and larger receipts from transfer fees, came to no more than £30,325, or a falling off of £14,180. After providing for London office expenses, interest, etc., and writing off £919 for cost of issue of income bonds, the balance available came to £26,968, compared with £51,057, which gave, in addition to the annual debenture service of £23,400, a sum of £3,568 for reduction of arrears bringing them down to £2,176. At the date of the last report the company had a debit balance of £27,533 hanging over it, besides arrears of preference dividend amounting to £124,295, but under the funding scheme approved by the shareholders at the meeting, the latter sum has been replaced by an issue of 4 per cent. income bonds, which is carried as a contingent liability against future profits. The Court of Chancery has now confirmed the second part of the funding scheme by making an order for the reduction of capital and practically wiping out the debit balance, but if this is all that is done the company is not so very much better off. No depreciation of oficinas and nitrate grounds beyond that provided by redemption of debentures, nor even of working plant, has been allowed for years, and drastic measures in this direction are necessary before the position can be really healthy. The directors, however, are hopeful of the future, and talk of the prospect of being able to meet the full interest on the new income bonds during the current year. Is nitre an annual crop?

South African Hotels, Limited.

In common with most other businesses in South Africa, this company has not found the year ended September 30 so remunerative as it had anticipated. Gross profits amounted to £8,655, or £1,115 less than for the previous thirteen months, and after providing for depreciation, debenture interest, etc., and writing off £585 for maintenance, compared with £1,490, the net profits were £4,697. Out of this the preference dividend is met, £400, balance of preliminary expenses, is written off, and the ordinary shares receive 5 per cent., against 7½ per cent. a year ago, leaving £414 to be carried forward, subject to directors' additional remuneration. Notwithstanding the poorer business done and the improbability of any improvement in the near future the directors have been rash enough to acquire further property, and have spent £29,377 on the purchase of Booysen's Hotel, with the result that further capital is required which they propose to raise by an issue of ordinary shares. Including this addition the property account is valued at £173,092, against which the share and debenture capital amounts to £150,000. Part of the cost of the new hotel has been met by a mortgage for £15,000, but a loan of £14,000 has also been raised, and the amount due to sundry creditors stands at £4,589, notwithstanding a reduction to £2,613 in stocks of wines, spirits, etc. Sundry debtors owe £1,158, and cash is £2,236 lower, at £8,990.

California Oilfields, Limited.

This company is still in the development stage to some extent, and during the twelve months ended June 30 added six producing wells, making a total of 17, of which 10 are yielding light and seven heavy oil, while two others expected to yield light oil are now being drilled. Attention is being devoted chiefly to the light oil at present as the market is more favourable for that class than for the heavier oil, which is suitable for little besides fuel and has therefore only a limited market. A contract for light oil has been entered into, and the Pacific Coast Oil Company has laid a branch pipe line to facilitate delivery therewith, but this was not in full working order until towards the end of the year. Notwithstanding the disadvantages under which the company worked the deliveries for the year amounted to 90,527 barrels light and 113,735 barrels heavy oil, yielding £17.214. In addition, interest and transfer fees produced £155, making a total of £17 369, and after writing off £7,082 for depreciation, etc., including £1 581, or 10 per cent. off preliminary expenses, and meeting administration and other charges, there was a balance of £4,440 which the directors have decided to carry forward.

Peninsular and Oriental Steam Navigation Company.—Notices have been sent out calling special general meetings for Wednesday, December 30, of the proprietors, preferred and deferred stock holders, of the company, for the purpose of either confirming or sanctioning, as the case may be, the resolution passed at the special meeting of 11th inst. The first meeting, that of the proprietors, will commence at one o'clock, and will be held at the offices of the company, 122, Leadenhall Street, E.C.

TRADE AND PRODUCE.

Wheat.—Markets have been steady, with no increasing interest or animation in business transactions. English wheat was rather easier for a time, but has steadied again, and foreign has remained without change. Farmers' deliveries for the week were 58,180 qrs., averaging 26s. 7d. per qr., against 51,695 qrs., averaging 26s. 8d. last week, and the imports for the week were 414,471 qrs., against 256,270 the week before. This season of the year is generally dull, but is perhaps duller than usual just now, millers being so heavily stocked. The outlook for the wheat crop next year is not very promising, as the acreage sown is the smallest for many years past, and much of the seed put in has been rotted by the water-logged condition of the ground. American markets have been steadier. Considerable bear pressure was brought to lower them, but continued unfavourable news from the Argentine and persistent buying by the Armour crowd counteracted the downward tendency. Bradstreet estimates the quantity in sight east of the Rockies at 60,136,000 bushels, against 59,050,000 last week, and 80,527,000 a year ago.

Wool.—Dullness continues in almost every direction, but particularly in piece goods, and manufacturers complain that even the business they do transact is at unprofitable rates. Yet an opinion seems to be gaining ground that the new year will see some improvement. Already in raw materials there appears a more confident tone, and the decline in prices has stopped for the time being. Yarns also are better, and export merchants more willing to pay spinners' demands, but home trade in them is still very restricted, new contracts being placed with great difficulty.

Linen.—The downward movement in flax has not lasted long. Russian has gone higher than ever, and home produce, though considerably cheaper is selling at the highest quotations of the year. Yarns have risen, too, in sympathy, and spinners are finding themselves rather awkwardly placed. Their stocks are low, large contracts may be expected in the spring, if trade has anything like its usual activity then, and replenishing is likely to be a costly and unprofitable business, as supplies are scarce, and likely to become dearer still. At present trade is decidedly hampered by the dearness of raw materials. Christmas orders are fewer than for some years past. Exports remain fair and always with the promise of improvement, yet to be fulfilled. The Board of Trade returns for November show that the value of linen piece goods exported from the United Kingdom was £312,854 against £299,434 in November last year.

Cotton.—The prices of raw cotton still keep on the upward grade, though the excitement is gradually dying away. Quotations, however, will tend to stiffen until the end of the year, since there is a fair amount of cotton to be called this month which must have a hardening influence on values. Receipts at the American ports continue on a liberal scale, and the visible supplies for the Continent are now in excess of last year, though we are still behind. The Master Spinners' Federation is seeking for a means to check the gambling operations in the States, and its present idea is an arrangement by which universal short time shall be declared. Both the Continental and American Federations have been approached with the view of sounding them upon the subject, and a further meeting will be held on December 29 to discusss their replies. Already, Sir Jacob Behrens and Sons inform us, several spinners of coarse twist and weft have decided to adopt short time, and the approaching holidays are almost sure to be extended as far as possible. On account of the abnormal prices now ruling, Mr. Ellison has reduced his estimate of the world's consumption of American cotton to about 10¾ million bales. In Egyptian there was no change this week, until last night. The consumption of yarns against old contracts continues fairly good, yet at the same time spinners find it extremely difficult to sell at present rates. Only a retail business is reported for the home trade, unless in certain exceptional cases where a spinner or a merchant has been in a position to heavily undersell his competitors. To make matters worse financial troubles are looming ahead, and the future for manufacturers and spinners holds out the promise of anything but a rosy time. Export business is nearly defunct, the Eastern markets being quite unworkable, while the near Continental only buy sparingly of American yarns. The cloth market is quiet, but prices keep firm, simply on account of the manufacturers being unable to lower the rates, with price of raw material steadily mounting. India continues to inquire fairly well, but business has been done only with Calcutta, while China is apparently satisfied with its recent purchases since all the recent inquiries it has made have been far below manufacturers' ideas.

New York until Thursday was in a fairly quiet mood, though any little report affected values. At one moment it was a rumour of a change of camp by some of the big operators, the next the weather, and immediately after large receipts, prices fluctuating with each, though the general tendency was for them to rise. But on Thursday the bears became panic-stricken, and bolted for cover. The big bull interests at once seized their opportunity, and manipulated prices until they thought it time to realise, though even their sales had little effect upon the market. Several of the southern buyers for export are reported to be defaulting on their contracts, and this has scared Continental spinners, many of whom have sold ahead. Next week being Christmas there will not be much doing, but with the turn of the year there is every prospect of another fit of madness coming over the markets.

Liverpool, so far as spot was concerned, closed irregular last night, though quiet, in the early part of the day. Quotations were up eight points for American, middling being 7d., and M.F. 7.26d. Egyptians were only in moderate demand, but prices dis-

played a tendency to stiffen, brown fair being 7 9-16d., and F.G. fair 8 9-16d., while all other descriptions were decidedly harder on the day. Futures were feverish, Dec. quoted at 6.86d., Dec.-Jan. 6.81d. to 6.82d., Jan.-Feb. 6.77d. to 6.78d., Feb.-March 6.76d., March-April 6.74d., and April-May 6.73d.

Coal.—Christmas holidays and colder weather are giving a temporary fillip at any rate to some portions of the trade. Yorkshire and Lancashire collieries are brisker, and pits mostly working full time. Shipping also is better from these parts, and at slightly higher rates. In the north of England it is otherwise, for there steams are at a low ebb. Stocks, even on short time, are accumulating, and contractors are refusing to pay such high prices for next year's deliveries, as are ruling now. Scotland has done a very fair business, and this week's shipments exceed those of last by 30,000 tons, but in Wales trade is rather dull, except in Cardiff, where prices are firmer than a week ago. Swansea districts show no improvement.

Copper.—Excitement in tin caused the copper market to be rather neglected, and business done has been limited, but the tone has kept very firm throughout the week. Increasing prices in America and a decrease of 133 tons in the visible supply have had a hardening effect. Prices have fluctuated very little, the quotations last night being £56 15s. for cash and £56 7s. 6d. for three months.

Tin.—Another exciting week, a widely fluctuating market, with high prices, and the natural reaction therefrom. On Wednesday business in the East at £129 c.i.f. sent up prices rapidly here to as much as £130 for three months, or 30s. over the closing rates of the night before. Then came a sharp fall, and in spite of one or two efforts to steady the market, prices dropped rapidly, till last night, when they were £126 2s. 6d. cash, and £127 2s. 6d. three months, the market being quiet.

Iron and Steel.—Though perhaps not quite so gloomy as last week, there is again no substantial change to report in the iron and steel industries. Glasgow cheered up a little on the strength of a report that the short time in the States was already beginning to leave its mark upon the output, but even this did not succeed in bringing out much real business. Cleveland warrants were the only description dealt in, cash being quoted at 41s. 7d. cash, or 41s. 7½d. delivery in twenty-one days, and the prices asked for Scotch and Cumbe land can only be described as nominal. The outlook in the finished iron and steel trades is for the moment very black, and though everyone hopes for a change with the New Year there is really little to justify any such thing taking place. Business in the north of England likewise continues depressed in spite of the fall in prices having for the moment ceased. Quotations both for pigs and warrants have kept fairly steady, much to the market's surprise, since at this season of the year they are expected to drop. This steadiness, however, has induced consumers to buy for forward delivery, and a fair inquiry has sprung up for the first half of the coming year. The rail mills are the only department of the finished trades which can be said to be actively employed, the remaining branches having little or no work on hand. An order for 7,000 tons of tramway rails, fish-plates, etc., for the Johannesburg Municipal Trams has gone to Messrs. Bolckow, Vaughan and Co., the Belgian firm which originally secured it having cried off. At Barrow the makers of hematite find considerable difficulty in disposing of their output, small though it is. The greater portion is being taken by the home steel producers, and when they close for Christmas there will be a general closing down of furnaces, although only twenty are now in blast.

Tea.—The markets closed before the holidays with a firmer undertone than has been visible for some weeks past. Supplies have been held back a little, and the smaller offerings have had a beneficial effect upon auctions. 35,051 packages of Indian received a good demand, prices, without any appreciable advance, maintained their late rates, and the average for the week was 7.49d., against 7.36d. last week. 16,763 packages of Ceylon also went well, common teas especially, and at improving prices, but the medium and better sorts more irregular, and the average for the week was only 7.51d. against 7.60d. last week, and 7.77d. in 1902. The total offerings of this season's Indian tea up to date amount to 761,800 packages, against 775,000 packages last year, and our total imports of tea to November 30 have been well maintained, the Custom House returns giving the amounts as 261,184,673 against 262,778,588. Ceylon has sent over 11 million less than last year, and China and other countries, to meet the demand for low-priced teas, about nine million more.

Sugar.—Last Saturday the market became animated over a mistranslated cable, which estimated the Cuban crop at 795,000 tons instead of 1,200,000 tons. Such an error is so obvious that it is difficult to understand why people should act upon it unless it was that there was already a strong desire in certain quarters to buy or to cover. This is Mr. Czarnikow's opinion, and it is supported by the fact that the advance of ¾d. to 1d. per cwt. was maintained for several days. Prices, however, gradually slipped back, and closed with December beet at 8s. 4½d. Jan.-March 8s. 6d., April-June 8s. 8¾d., August 8s. 11½d., and Oct.-Dec. 9s. 1¼d. In cane business has been a little more active, especially for refining sugars, though prices are in buyers' favour. The report from cane-producing countries show that the West Indies are suffering from want of rain, which is causing the planters much anxiety, while in Louisiana the crop is by some authorities estimated to be only 210,000 tons. From Cuba, however, the accounts are good. Although the Senate has passed the Cuban Reciprocity Bill, and the President has signed it, prices in the States have so far not moved up. This week stocks are up to 100,000 tons, imports having only exceeded the moderate meltings by 1,000 tons.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and December 12, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Dec. 12, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Dec. 13, 1902.
	£	£	£
Balances, April 1:			
Bank of England	—	5,887,524	8,080,383
Bank of Ireland	—	749,603	486,564
		6,637,127	8,566,947
Revenue.			
Customs	34,640,000	24,052,000	24,547,000
Excise	32,700,000	22,056,000	22,797,000

Actuary and Secretary.

NOTICE.—Next Week Christmas Day falls on Friday, and therefore the Investors' Review *for December 26th will be published on Thursday morning.*

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

Money has been hardening in the latter part of this week, until these two days borrowers often paid 4 per cent., and never less than 3½ and 3¾ per cent. for day to day money. Early in the week seven day loans were obtainable from bankers at 3¾ per cent., but they also were able to get 3½ per cent. yesterday and to-day, and the India Council secured 4 per cent. for money advanced into January. Discount rates have followed, but are still low enough, prospects considered. Most brokers were working at 3⅝ to 11-16 per cent. in three months' bank bills in the early part of the week, and the rate then tended downwards, because the New York exchange had moved up sufficiently to remove the dread of further withdrawals from the Bank of England for the States, and because the theory continued to be propagated that money is certain to be cheap at the new year. Now, however, the discount rate is firm at 3¾, and tending upwards. As yet the Bank has not lent much, only done a little discounting of short bills, scarcely, however, amounting to more than the replacement of its short loans to the market falling due and paid off.

We do not see cheap money at the new year, beyond perhaps the first ten days or a fortnight, and even that length of slack time is not certain. Much will depend upon the extent to which the market is driven to the Bank between now and the 31st inst. In all probability the creations of credit there will be on a magnificent scale, although perhaps not so great as recent year ends have familiarised us with, and that borrowed money will choke up credit channels in the early days of the new year, but the dividends will all be utilised to pay it back, and as at the present time bankers are really very poor, other deposits being under £39,000,000, and the reserve down to £20,471,000, the leanness will soon become once more accentuated. The reserve shrunk £521,000 during the past Bank week, owing to an increase of about £460,000 in the internal circulation, £416,000 of it in coin. Coin and notes will continue to be drawn into active circulation, and the market poverty is therefore certain to be great before the end of the year. Many rely in the coming quarter on relief through the redemption of the Ways and Means Treasury bills recently issued, which must be paid off to the amount of £8,500,000 before March 31. And this no doubt will help considerably, but not enough to ensure low rates. Nothing will do that except gold in from abroad.

The position of the bullion market is less adverse to the Bank of England's chance of adding to its reduced stock of the metal. Its total of coin and bullion in both departments has now fallen to £30,427,000, and although there is no sure prospect of building it up again the price of bar gold has fallen to 77s. 10½d. per oz., Mint price, and therefore some of the supplies of new gold coming into the open market may now be picked up and retained here. Help also is given to the market by the successive consignments of the metal from India, whence another £500,000 is on the way to pay for silver required for silver rupee manufacture, but until we can see bar gold steadily flowing into the Bank of England we can have no certainty of cheap money, or anything approaching cheap money. With the new year, though, renewed export demands for the metal will spring up in various quarters, even should no more go to the United States, and it is estimated that £6,000,000 may depart within the new few months to Argentina alone. Therefore we can see no prolonged time of low rates in the credit market. They might, on the contrary, become embarrassingly high before the spring has far advanced.

SILVER.

Confirmation of the belief that the Indian Government had resumed its purchases of bars was thought to be assured by the news that another shipment of 500,000 sovereigns had been made to London last Saturday, and the market at once assumed a firm appearance. The buying which set in was variously ascribed to bazaar support, Continental inquiries, and "bear" covering, and was sufficiently strong to cause quotations to move upwards until they touched 25 13-16d. per oz. for cash, and 25 9-16d. per oz. for delivery two months forward. At this point a slight hesitation was perceptible, due to a pause in the India Council's operations, but no set back occurred, and almost immediately after the spot price hardened another 1-16d. At these levels, however, Singapore holders were tempted to unload, and although there was still a moderate demand for the metal, it was insufficient to absorb all that was offered, and prices relapsed to 25⅝d. and 25¼d. per oz., respectively, closing dull. Purchasers of the Rs.60,00,000 India Council drafts are still confining themselves entirely to bills, the applications sent in on Wednesda being for Rs.3,34,30,000 of these, and tenders at 1s. 4 1-16d. per rupee received about 19 per cent. Next week another Rs.60,00,000 will be offered.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, December 16, 1903.

Stock Market Notes and Comments.

It is again unnecessary to say much about stock markets this week, for the simple reason that they have been in a state of semi-paralysis. Whenever an attempt was made either here or in Wall Street or on the Paris Bourse to raise prices a trifle some rumour spread that damped the life out of things, or liquidation was started from somewhere which effectually checked the rise. There is now no chance of Consols getting up to 90 before bank balance-sheet day, and we fear the coming of the Chinese in South Africa is not going to produce that lively state of affairs in the Kaffir Circus we have been so insistently told to expect. Perhaps one of the most significant symptoms of the time is found in the changed attitude of the market towards new issues. Five years ago, or less, it was the habit to despise anything small. Anything much under £500,000 was not worth the market's while to take up and play with. The bigger an issue of shares or stock the more popular it was. Now it is all the other way, and the little things go off while the big things hang on the hands of the underwriters. Stock for stock we should say that the debenture issue of the Canadian Pacific Railway Company is on the whole a better security than the Port Elizabeth loan, yet the latter was fully subscribed, and underwriters of the other had to take about half the amount. The only reason given for this difference of treatment is that the Canadian Pacific issue amounted to nearly £3,000,000, whereas the Port Elizabeth loan was under £400,000.

Markets are not going to boom at the new year either, were it for no other reason than that too many new demands for capital loom in the near future. New South Wales has raised about £500,000 this week, or is trying to, in 4 per cent. Treasury bills offered at 98¼ and redeemable in August, 1906. Other colonies are hungering for money, and in fact there is no great capital user, corporation or state which does not want what it will have great difficulty in getting. But the shadow of shadows that hangs over markets just now is the fear of war between Russia and Japan, and there we see the effect of the Anglo-Japanese alliance. We should probably have been comparatively indifferent to the dispute had it not been for the dread we are in of being drawn on to join in it. Until something is settled one way or other, and we hope it will be peace, this cause alone will make markets as slippery as highways in a half thaw.

The Week's Stock Markets.

There is little to tell concerning the stock markets for the past week, and if another Japanese scare had not come along towards the end, a particularly uneventful period would have been passed through. A holiday atmosphere already pervades all departments, and even the modest amount of business going on during recent months has practically disappeared. Whether the new year will bring with it any revival of speculative activity depends very much on the course of Far Eastern affairs, and in the meantime the Stock Exchange can do little more than look as cheerful as possible and hope for the best. Dealing was always very languid in Consols but prices kept tolerably steady until a story went around that the Russo-Japanese negotiations had been broken off, when they relapsed sharply, the cash quotation receding to 88½. A slight recovery followed and prices finish ⅛ easier for money at 88 9-16 to 88 11-16 and ¼ down for the account at 88 11-16 to 88 13-16. Khaki stock improved to 97¼ and Transvaal scrip managed to retain an early improvement

and finished at 98½. Childers 2½ per cent. gained ¼ and India 2½ per cent. closed ½ up, but other British Funds were as before. In the Home County and Corporation list Plymouth 3 per cent. went back 2, and Wolverhampton 3 per cent. 1½, while Birmingham 3 per cent. fell 1. As usual very little went on amongst Colonial Inscribed stocks, and movements were scanty. Changes that did occur, however, were favourable, and Canada 4 per cent. reduced and 3½ per cent., New South Wales, 3½ per cent., Queensland fully paid scrip, New Zealand 5 per cent., and Ceylon 3 per cent. all finished 1 higher, and Cape Town scrip rose ½. The latter is now 1 premium, and as the Port Elizabeth loan was slightly over applied for by the public it has been lifted 10s. above the price of issue. The Johannesburg loan, however, is still ¼ discount. To provide for current needs the New South Wales Government is offering another issue of £500,000 Treasury bonds, repayable in 1907. They carry 4 per cent. interest and are being offered privately at 98¼, meaning that after

allowing for commissions and discounts to guarantors the colony is borrowing at 4½ per cent. Such are the fruits of extravagance.

After resting quietly for a day or two awaiting developments, Japanese bonds became severely depressed on the many adverse rumours flying about, and all issues fell rapidly. As mentioned above, the first story was to the effect that negotiations had broken down, but later came the more reassuring news that the Russian reply not being acceptable negotiations would have to be reopened, and prices slightly rallied. Nevertheless, closing figures show a loss of 1½ to 2. Apart from Japs the Foreign bond market was usually inclined to improve, and Argentines went ahead as the result of a small business, with the Waterworks and Northern Central Railway issues in chief request. Brazilians, too, gained fractionally here and there, but Uruguay 3½ per cent., after being higher, eased off. Amongst Central American defaulters some attention was paid to Colombian bonds, causing them to leave off 1½ higher, and Costa Rica "B" closed ½ up. Concerning the last-named, it should be remarked that in terms of the agreement between the Costa Rican Government and the bondholders both the "A" and "B" series have reverted to their former position after six months' default. Interest on these bonds, therefore, is now accumulating at 5 per cent. per annum, and it is necessary to point this out because the Stock Exchange Official List continues to describe the bonds as 3 and 2½ per cent. Continental stocks were moderately steady, and German and Italian added fractions. Egyptian Unified were dull and lower, and Turkish priority lost 2½, but the Unified stock closed ¾ stronger. Amongst Chinese loans the 1895 gold bonds rose 1, while the silver loan was 1 easier, and the Imperial Railway issue fell ½.

Home Railway ordinary stocks have been for the most part idle and neglected. A little burst of activity followed the publication of one or two encouraging traffic returns on Tuesday, but it was entirely confined to the professionals, and Wednesday's batch of figures completely checked any further disposition to drive prices up. The weekly returns of the Brighton, Great Eastern and South-Eastern and Chatham lines were all considered satisfactory, and in a less degree, so were Great Central and Great Western. In the case of the Brighton, however, the publication at first passed unnoticed, owing to fears of imminent capital requirements, but later all issues were pushed up 1. South-Eastern ordinary rose 2, together with the preferred, without special cause, and the deferred improved ½ on buying said to be against call options given for the end of February account. Chatham ordinary was fractionally better, while Great Eastern was quite unaffected by the return. Metropolitan advanced rapidly on purchases variously ascribed to Yankee support, inside manipulation and call option covering, and although it did not hold quite at the top, went out with a rise of 1. The North-Eastern Company is another that is expected to make a demand for more capital shortly, and the quotation fell 1, North-Western lost 1½, Great Western ½, Great Northern deferred ¼, and Midland deferred ½. District also dropped ½. Scotch stocks shared in the general weakness, Caledonian deferred receding ¼, and North British deferred ½.

Yankee Railroad shares came over easier from Wall Street on Monday morning as the result of the nervousness created by the return of the New York Associated Banks, but operators here cheerfully pegged them up over parity under the lead of Erie ordinary, and by dribbling in small buying orders contrived to hold quotations fairly steady until New York opened. The feeling there was one of hesitation, as it is suggested that the expected ease in money after the New Year may prove to be more than offset by heavy railway demands, and there seem to be good grounds for this belief as the Atchison is already in the field with an issue of £2,000,000 general 4 per cent. bonds. The Northern Securities question, too, has come to the front again by the hearing of the appeal to the

Supreme Court, and altogether Wall Street was slow to follow our lead. The decision in the case is not expected before February, and after the first stir caused by the opening of the case, it was speedily relegated to the background, and as New York seemed disposed to support Southern, Southern Pacific and Union Pacific issues our market gave them a helping hand also. Although we, as usual, endeavoured to make things look good at the start, heaviness again prevailed on Wednesday under the influence of United States Steel issues. The passing of the Crucible Steel Company's preferred dividend gave the "bears" a chance to hammer the Trust's stocks, of which they took full advantage, and a general setback followed. On Thursday the markets here and in New York were equally idle, and after a slight rally on favourable cables regarding the Steel Trust, quotations once more eased off. At the close Norfolk preferred stood out well above the rest of the list with an advance of 2½, the next largest gain being one of $1 in Union Pacific preferred. Chesapeake rose ¾. Denver ordinary, on the other hand, lost 1, while the preferred improved ½, Atchison ordinary were also 1 lower, and Baltimore ordinary, Southern preferred, and one or two more fell ¼ to ¾.

Canadian Railway securities have fluctuated within very modest limits all week, and Canadian Pacific shares, after being as much as ⅝ up, closed unaltered. The 4 per cent. debenture stock fell to about 106 in the middle of the week, so that the "turn" on the new issue has disappeared. This has not appealed to the public to the extent hoped, and the underwriters had to take up something like half the amount offered. Grank Trunk stocks were equally quiet, and the market has already begun its forecasts of the November traffic statement with estimates of a net increase ranging from £6,000 to £8,000. On balance the ordinary and guaranteed lost ½ and the third preference ¾, while the first preference closed ½ better. Of other railways in British possessions, Rhodesian Railways 4 per cent. bonds advanced 1, and the 4 per cent. bonds of the North African Railway of the South African Republic—a Belgian undertaking— were marked up 8, on an agreement said to have been concluded with the Government to pay arrears of interest from the date of the annexation of the colony. A few Indian Railway issues, including Assam Bengal, East Indian deferred and "D" annuities, and Bengal Nagpur stock improved 1 to 1½.

Again by far the most active section of the Stock Exchange has been that devoted to Argentine Railways, and even in it the baneful effects of a nineteen day account have begun to make themselves felt. Business has been on a large scale in Pacific and Rorario stocks, but most of the advances recorded early in the week were wiped out later on profit taking. Pacific ordinary, however, finished with a further gain of 2, while Rosario ordinary was ½ lower. Cordoba Central first debenture stock (Central Northern section) was also the object of vigorous buying, and improved 3. Pacific first preference, in which there was comparatively little doing, was also marked up 3, Bahia Blanca and North-Western preferred gained 2, and the first debenture stock 1. Cordoba and Rosario preference advanced 2, Cordoba Central first preference 1, and Argentine Great Western 1, but Buenos Ayres Western dropped 2, and Buenos Ayres Great Southern ordinary and 5 per cent. preference, Rosario deferred, Argentine North-Eastern preference 1, and Entre Rios preference all fell 1. Of other South American companies Campos and Carangola debentures put on 3, Costa Rica first mortgage debentures 5, and Guayaquil and Quito Railway bonds 1, and San Paulo Brazilian ordinary and preferred fell and rose 1 respectively. Mexican Railway stocks rarely moved and closed unaltered, and Interoceanic of Mexico "B" debenture stock advanced 2.

Not much business went on amongst Miscellaneous securities, but prices generally were inclined to harden. Some recovery occurred in Waterworks stock on the East London award. The company gets £3,900,000 with a possibility of the amount being increased to £4,300,000 should a pending appeal to the House of Lords prove successful. The stock gained 7½. Other stocks improved in sympathy, West Middlesex, whose case is now before the Arbitrators, gaining 5, and Southwark and Vauxhall ordinary 5, but New River continued depressed, and further went back 10. Dock stocks were lifeless. American Brewery securities continue to receive attention, and further small advances have been recorded. Home companies, too, have not been entirely neglected, and a little revival of interest was noticeable in Watney Combe issues,

resulting in a gain of 7 in the deferred and 2 in the preferred. Showell's Brewery ordinary shares were marked up to 7 before the annual report came out, but when it was found that no final dividend was recommended, there was a sharp relapse to 6. Welsbach securities came into favour when the Appeal Court decided against the opposition to the re-organisation scheme and the preference closed 2 and the ordinary 1 better. Gas Lights were steady, but South Metropolitans were easier. After an initial rise Oil shares receded slightly on a relapse in the price of the commodity, but the market still looks good. Catering securities rarely changed, but Eastmans were firm on the dividend announcement, as all preference arrears are now wiped out, and the market hopes that next year the ordinary shares will stand in. Textile things met with small inquiry. South Durham Steel preference were weak on the amalgamation proposals referred to elsewhere, and United States Steels closed ½ lower for the common and 1 down for the preferred shares. Hudson's Bays were bought with some vigour, resulting in a gain of 1½, and Anglo-Argentine Trams improved slightly on the suggested fusion with the City of Buenos Ayres undertaking.

Markets fluctuated to-day within narrow limits, and closed heavy for Consols, and many things are indeed in a state of semi-paralysis over this Far Eastern question. The most distressing incident of the day is the continued weakness in the better class of Home Railway stocks. North-Western ordinary, for instance, fell 2 at one time to-day and finished weak. This kind of shrinkage in prices hits the investor very cruelly, and there is no consolation visible. Mr. Chamberlain, indeed, amongst other glamours thrown out by him at Leeds talked of prosperity to the woollen industry of Yorkshire through a tariff which would shut out imports of United States woollen goods, imports which only exist in his fervid imagination. And really it is no wonder looking at the way losses are accruing on every side that fantastic nonsense of this kind should be clutched at by people driven almost to despair. The Kaffir Circus keeps steadyish, but the elements of a boom are quite absent there. Johannesburg scrip has recovered to ¼ discount and Port Elizabeth scrip is ¼ to ½ premium. Canadian Pacific stock keeps about 1 discount.

MINING NOTES AND NEWS.

We have hoed through another quiet week, and have no growth in outside business to record. There has been a holiday mood in the market, and members have larked. South African shares have scarcely moved either way. In a few of the speculative favourites some option dealing has been observable, and this, together with a little French support has kept prices firm, but the French have now taken to selling. Very little has been heard of the labour question, beyond the news that the new Bill dealing with the importation of Chinese was introduced in the Legislative Council on Wednesday by Sir George Farrar. Several more interim dividends have been declared by leading companies, but to these the public have been indifferent, they have not helped in the least to stimulate business. The following are the declarations, the issued capitals of the companies and the sums required to pay the dividends for the half-years:—

	Dividends.	Issued Capitals. £	Amount Required. £
Bonanza	50 per cent.	200,000	100,000
Crown Deep	30 ,,	300,000	90,000
Rose Deep	12½ ,,	425 000	53,125
Geldenhuis Deep	25 ,,	300,000	75,000
Robinson (£5)	5½ ,,	2,750,000	151,250
Langlaagte Estate ...	10 ,,	470,000	47,000

All the above companies have been crushing for a considerable time, and the profits earned come from gold mining. Shareholders will be glad of the money with which to pay for Christmas presents and delectables, but they are not likely to find much of a surplus left wherewith to speculate for the benefit of others. De Beers issues have been hoisted a little higher, with talk of a 15s. interim dividend, but Rhodesian shares have been weak. The output for the month of November is an exceedingly poor one, showing a shrinkage of more than 2,000 oz., compared with October. This is the consequence of the shutting down of mills because the controllers are hankering for Chinese labour.

Westralians have received no support from any quarter, the "shop" interest relaxing in their efforts to keep the market alive in hopes of bringing in the public. They may, or they may not, be husbanding their energies for another campaign, when the New Year comes. Great Fingalls have been conspicuously weak, but towards the end they have recovered a little of their early loss.

The excitement in Associated and Kalgurlis has quite died away. In fact, the latter shares have been freely offered, probably by those who recently rigged up the price.

There are no changes of any importance to record in the West African list. But the powers that be here evidently mean to do their utmost to attract outsiders, for at the meeting on Wednesday of the Ashanti Goldfields the directors announced their intention of splitting the £1 shares into five shares of 4s. each. We dealt with this company's report last week. Here's a chance, then, for the impecunious, to buy paper that will make them wealthy and wise, for wisdom can be taught by speculating in the Jungle market, where dividends are paid out of premiums and shares hoisted to inflated figures, to collapse when the premium fountain is dried up. Ashanti Goldfields had a fine jump yesterday.

Egyptians, after a temporary spurt, have moved downwards. Amongst Indians Champion Reefs have been strong on the statements at the meeting of the company, when the suggestion was made that the 10s. shares should be divided into four shares of 2s. 6d. each. Etruscans have heavily relapsed, Rio Tintos are better on balance, and other copper shares have been steady.

Ottos Kopje Diamond Mines (1903).—This oft-reconstructed company, being sadly hard-up for the needful, is making an effort to raise the wind by offering the whole of its ordinary shares—920,000—for public subscription. A prospectus has been issued informing the world that the new company has been formed to acquire, "as a going concern," that magnificent property in which so much money has already been sunk, called the Ottos Kopje Diamond Mines. This is a name very familiar to the public, too familiar, in fact; it can boast of such a splendid reconstructive past. It is estimated that, exclusive of London expenses, the vendor company has spent upon the property the sum of £200,000 and that down to July, 1902, when the available capital was exhausted, the diamonds won realised the prodigious sum of £21,425. Nor does this exhaust the wealth, for the company possesses amongst its assets "an unusually large diamond of 336½ carats." Surely that diamond will prove irresistible? What a mad stampede there will be for the shares of a company that has already returned £21,000 worth of diamonds for an outlay of £200,000! The shares are worth their weight in gold.

Rhodesia Exploration and Development Company.—In their report for the financial year to the end of June the directors confess that the general depression which has prevailed during the twelve months "has affected this company in common with all South African undertakings." However, they do not appear to be stricken down with grief; on the contrary, they "are pleased to state that the year has been one of uninterrupted progress in the development of the many properties in which the company is interested." A number of shares were sold bringing in a profit of £20,941, whilst £13,861 came from agency and other fees, £8,385 from dividends and interest, £238 from transfer fees, and £708 from rents, making a total income of £44,134. London outgo absorbed £6,472, Buluwayo expenses £16,271, in addition to which the profit and loss account is debited with £4,592, written off abandoned mining proposals, £1,001 for depreciation, and £200 for bad and doubtful debts, leaving a credit of £15,597. To this has to be added the balance of £90,688 brought forward, making £106,285, and out of it a final dividend of 5 per cent. for last year and an interim distribution of 45 per cent. for the current year, payable 20 per cent. in cash and 25 per cent. in fully-paid shares of the Buluwayo Market and Offices Company, were distributed as far back as last January. These dividends, together with the percentages of the directors, amount to £93,095. No less than £190,970 was received in premiums during the year, which account the directors have debited with £100,970 for abandoned claims and in making provision for depreciation of shares. The capital was increased to £225,000 by the creation of 50,000 new shares. Assets consist of cash £38,570, amount invested in Colonial Government stock and English railway debentures £19 311, loans on security £7,020, various shares at cost £436,071, and sundry debtors £108,508, of which £93,192 is owing by subsidiary companies. On the other side creditors appear for £16,188, bills payable amount to £384, and there are contingent liabilities aggregating £41,397.

Davies Selukwe Development.—In giving notice of a general meeting of this Rhodesian company on the 11th inst., the directors say no business will be transacted thereat, but that it will be adjourned until the arrival in England, about the end of January, of the chairman, Mr. T. M. Thackwaite, who will present a report on the company's properties. It is added, just to put the shareholders in a good humour with themselves, otherwise they might be too gloomy this Christmas, that the company's engineers have recently struck an important ore body on the San Antonio claims, and early next year the development now being pushed will be further advanced, and the results communicated to the shareholders at the postponed meeting.

Tati Concessions.—The gross profit on the trading last year was £4,252, that on the hotel was £2,443, on cattle £1,037, whilst £9,740 came from miscellaneous sources, the net profit amounting to £7,897, after allowing for expenditure, depreciation, provision for bad and doubtful debts, etc. The profit and loss account is additionally credited with £2,494 interest on investments, £639 accrued interest, £788 profit on realised investments, £57 from transfer fees, £67 extra discounts and allowances, and £1,981 accrued interest on the debentures of the Premier Tati Monarch Company, although the latter is still unpaid. London office expenses absorb £2,200, debenture interest £5,000 insurance £276, miscellaneous charges £969, balance of expenses of issuing debentures £550, leaving a net balance of £4 929 to be added to the previous credit of £15,985. Against liabilities of £5,641 the company has £1,776 in cash, investments valued at £133,267, comprising shares and debentures in the Premier Tati Monarch, and shares in the Tati Blue Jacket, with sundry debtors down for £56,334, £44,643 of which is owing by the Premier Tati Monarch.

General Mining and Finance Corporation.—This is the parent of the Albu group of companies, and the directors have issued a circular announcing that an extraordinary general meeting is to be held at Johannesburg on January 19 to pass a resolution confirming the sale of the Corporation's 250,000 reserve shares, at the price of £2 15s. per share (cash against delivery), to Messrs. G. and L. Albu, acting on behalf of themselves, the Dresdner Bank, the Direction der Disconto Gesellschaft, and the firm of S. Bleichroeder. The money is wanted for the prosecution of the company's extended operations, but why have the shares not been offered to the shareholders? Because the directors fear they would not take them up? or because they hope some day to re-sell them at a much higher figure? The latter is the more likely. "It is confidently anticipated," say the optimistic directors, "that in the near future a permanent and satisfactory solution of the labour problem will be found, and the directors, mindful of the impetus which will be given to the whole country, and particularly to the mining industry, when abundant labour for the exploitation of enterprises is available, are anxious for the Corporation to be in a position to take advantage of opportunities to favourably increase its influence and activity. The Corporation has already controlling interests in many large profit-producing mines, and schemes are in contemplation having for object the greatly increased profit-earning capacity of the mines to which they relate." They also mention, with unconcealed joy, the fact that the premiums on the issue will realise the "very substantial reserve fund of £437,500." We dealt with the position of this company in our issue of June 13 last.

Transvaal Estates and Development Company.—Last year this company realised some of its investments, and made a profit of £17,096; interest on loans and deposits gave £15,762, rents, commissions, etc., brought in £10,565, and transfer fees £649, making a gross income of £44,073. The directors have had to reserve £25,760 to meet the depreciation in the value of investments at the end of September, and after allowing for ordinary expenses the profit is £9,990, which increases the accumulated credit balance to £24,759. Evidently no portion of this is to be distributed. The directors and shareholders deserve to be congratulated on the remarkable financial strength of the company, and taking this into consideration the shareholders may feel disappointed that they receive no dividend. The report speaks highly of the prospects of the company's farm called Zonderwater, as there have been several small finds of diamonds here.

Johannesburg Gold Fields.—In order to keep them going in fair comfort the directors of this company reduced her assets during the past twelve months by selling 3 063 Cinderella Deep shares, which realised the sum of £12,696. "Owing to the general depression of business in the Transvaal, no sales of the company's timber or land have taken place," which is practically all the information given in the customary brief report of the directors. No profit and loss account is published, the auditors remarking that they are informed this is not yet practicable. Expenditure in London totalled £2,396, the company receiving £1,668 from dividends and interest, and £93 from transfer fees, whilst in South Africa rents brought in £311, and expenses took £233. The company has a large sum in cash, with other available resources, the liabilities being very moderate.

Kamfersdam Mines.—This company has seriously suffered from the misfortune of falls of reef, which almost completely stopped the hauling of blue ground, interfered with the washing operations and necessitated the treatment of a large quantity of valueless ground with the blue. During the year to the end of June 683,995 loads of blue and reef were hauled, of which about 60 per cent. was reef and rubbish. Sales of diamonds consequently realised only £30,765, and there is a loss of £32,946 shown in the profit and loss account, which is reduced to £15,497 in the balance-sheet by deducting the sum brought in. Cash alone considerably exceeds liabilities. Prospects look more hopeful now that the fallen ground has been extracted, and the manager expects to be able to continue hauling and washing at least 10,000 loads of blue ground per week. Labour, however, is reported to be still scarce, and of indifferent quality.

Daggafontein Gold Mining Company.—This company was incorporated on October 1, 1902, and the report and accounts cover the nine months to the end of June. Boring operations were not started until September 9 of the present year, so the directors have very little to report. They issue a profit and loss account, showing that interest on loans and investments brought in £1,603 and transfer fees the large sum of £5, resulting in a loss of £5,797, legal expenses taking £1,590, and the cost of transferring the property £4,093. At the end of June the company had £2,684 in cash and Consols, at cost, £93,508, against liabilities of £2,650.

Tyne Valley Colliery (Transvaal).—In the twelve months ending June 30 this company's output was 105,051 tons, compared with 89,885 tons in the preceding year. Notwithstanding this larger output, however, the profit is smaller. The coal realised £10,548, after deducting mining costs and Johannesburg management charges, interest yielding £166, transfer fees £18, with £38 from other sources. After deducting London charges, interest on debentures, and depreciation, the net profit is £3 346, which, with the sum of £16,837 written off against capital account, clears off the debit balance, and leaves a credit of £261. By this means the authorised capital has been reduced from £100,000 to £83 163, and the issued capital from £84,183 to £67 345. Floating liabilities total £9,487, amply covered by debtors and cash.

HAMPTON PLAINS ESTATE.—This struggling and ill-favoured Westralian company has issued a report for the twelve months to the end of March last, and, as usual, the directors have little good news to impart. Hitherto the company has managed to exist mainly by its sales of water, but its revenue from this source is likely to stop, as the result of the action of the Government in stipulating that their customers shall purchase exclusively from the Government supply. In order to carry out drilling operations on an adequate scale, and at the same time to conserve the funds of the company, the directors have decided to form a boring syndicate to consist of 500,000 shares of 2s. 6d. each. There are to be no directors' fees, and the syndicate is to be managed by the Hampton Plains Estate as an auxiliary to its present organisation. The basis of the arrangement is that the syndicate shall carry out its operations on such parts of the estate as it may select, and that any discovery resulting therefrom shall be for the benefit of the company and the syndicate in equal shares. The net profit on sales of water, after allowing £15,463 for depreciation, was £11,015, and that on sales of bricks, after writing off £934, was £623. Bullion realised £4,377, sundry revenue brought in £3,832, and transfer fees, £68. Expenditure in the colony took £11,076, and that in London £3,008, leaving a credit of £5,832. But as £4,946 had to be written off investments, and £1,000 off commission on the issue of debentures, and debenture interest required £4,612, there is a loss of £4,726 to be added to the previous debit of £6,387, making £11,113. The company has over £9,000 in cash and other resources which will enable it to go on for some time in the hope that some hing may happen to avert reconstruction.

ASSOCIATED TAMWORTH MINES.—During the year to the end of October, shareholders are informed in the directoral report, work was steadily continued, and some 256 tons were crushed for a yield of 383 oz. of gold, an average of 1½ oz. to the ton, exclusive of 87 oz. from the copper plates. These 470 oz. realised £1.861, a further sum of £120 being received for crushing ore for neighbouring properties, making a total of £1,981, and as the expenditure absorbed £1,850, there was a small profit of £131. Unfortunately, however, the lode from which this ore was taken is now worked out, so it must have been a very small pocket rather than a reef, and as further operations have been unsuccessful—the ore won being too poor to pay mining expenses—the manager has been instructed to shut down the mine, whilst the directors take steps to get offers for the mine and plant. No doubt willing purchasers will come forward by the thousand, a mine without gold is so valuable to resell to the public. Other leases have been let on tribute, but the directors do not think the results have been so good as to induce the tributers to extend their contracts over any lengthened period. As a new property offered "involved a larger element of risk than they would be justified in recommending the shareholders to undertake," the directors have declined it. They have recently been advised by the manager in Australia of some promising ground within easy distance of the present mine, and they have given instructions for it to be thoroughly prospected. And in that uncertain state matters stand at present.

NORTH KALGURLI COMPANY.—This West Australian company does not issue a profit and loss account for the past twelve months to the end of August, but it is making progress towards that achievement. The report records the joyful news that the finances of the company have been assisted by the production and realisation of two parcels of rich ore, which were shipped to the smelters. One parcel contained 68 tons, yielding 4½ oz. of gold, and 15 oz. of silver per ton, and the other 110 tons, worth 5 oz. 8 dwts. of gold and 17 oz. of silver per ton, truly phenomenal richness! These realised respectively £1,724 and £2,053, or a total of £3,777. The Australian expenditure amounted to £12,918 and the London to £1,655, £124 being received in interest, transfer fees, etc. A ten-stamp battery has been erected and started crushing on October 1. The mine manager says there are about 30,000 tons of 15 dwt. ore in sight, enough to last the battery about 2½ years. It is as well, for the company's financial position is none too strong.

NEW CHILLAGOE RAILWAY AND MINES.—Interim reports and accounts for the six months ending June 30 have been published at the request, it is said, of English shareholders. The earnings of the railway from all sources amounted to £29,146, and the cost of working to £10,626, the percentage being 36.42 per cent. A total quantity of 16,201 tons of copper ore, and 994 tons of silver-lead ore were produced. One copper-smelting furnace ran continuously and treated 22,799 tons, the quantity of matte produced being 2,171 tons, containing 1,181 tons of copper, and 90,501 oz. of silver. The lead smelting furnace dealt with 7,585 tons, giving 1,740 tons of bullion, containing 100.083 oz. of silver. Copper and bullion sales realised, net, £90,370, and on general working account a profit of £21,534 was earned. After charging debenture interest, mineral lease rents, insurances, interest, and other administrative outgo, a credit of £1.491 is shown, which reduces the debit to £24.935. The financial position is fairly sound. taxation imposed by the Federal and State authorities in Mexico.

SULPHIDE CORPORATION.—Adverse metal markets affected the financial results of this company's business during the twelve months to the end of June. The average price of lead was exactly the same as in the preceding year—£11 8s. 10d. per ton—but the price of silver was only 25.2d. per ounce, compared with 27.6d. On the other hand, there was an appreciable improvement in the zinc market, the average price being £20 5s. 7d. against £17 5s. 8d. Furthermore, the company has suffered from the effect of movements in the underground workings of the Central Mine at Broken Hill, from which cause and likewise from the infiltration of water from a neighbouring mine, the output of leady concentrates was reduced, and the cost of production increased. Notwithstanding these troubles, the corporation earned largely increased profits. The proceeds of sales in Europe, less the quantity in transit at the end of June, 1902, amounted to £341,909, whilst the Australian sales realised £100,388. In addition, the products in transit at the end of last June fetched £232,824, the stock of ore, concentrates, and other products at the same date being valued at £61,374. Deducting costs, the profit on working account is £56,443. Dividends on investments brought in £960, profit on stores sold £101, and transfer fees £90, leaving a profit of £40,935, after allowing for interest, discount, law expenses, income-tax, and general expenses in London and Melbourne. Out of this interest on debentures requires £5,000, and depreciation £11,000, the net profit being £24,935, compared with £2,928. As £96,921 was brought in, the credit is thus increased to £121,856, and after paying 5 per cent. on the preference shares, £94,356 is carried forward. The directors are, for such a large concern, trading on a somewhat slender cash basis, namely £4,799, otherwise the available resources well cover the floating liabilities and a creditable balance-sheet is issued.

BONNIE DUNDEE GOLD MINES.—The receipts of this company from all sources in the twelve months closing June 30 amounted to £10,407, and the expenditure to £17,122, the latter including £6,629, the cost of the various works carried on at No. 2 shaft. By transferring this to the balance-sheet the directors show a loss of only £85, which increases the debit to £6,968. Sundry debtors owe £145, and cash totals £221 against liabilities of £2,824, so unless prospects greatly improve, of which there is little indication, reconstruction looks probable. There is still hope, as long as we can keep on prospecting, says the managing director.

CAYLLOMA SILVER MINING COMPANY.—In the year ending June 30 this company raised 906 tons of ore, assaying an average of 355 oz. 9 dwts. of fine silver, and 15 dwts. of gold per ton, and realising £31,198, against 730 tons, assaying 416 oz. 6 dwts. of silver and 1 oz. 1 dwt. per ton, valued at £29,837. The bar silver contained 181,658 standard oz. of silver, and 129 oz. of gold, netting £18,278, making a total of £49,477. Outgoings absorbed £51,590, and depreciation £2,000, a loss of £4,112 resulting. Deducting this from the credit of £14,880, leaves a balance of £10,768 to be carried forward. The company is in a distressing financial position, as against creditors for £49,269, and bills payable for £7,322, there are ores and bullion in transit valued at £24,700, cash £1 644, and debtors £458, with some stocks and stores put at £13,060.

PALMAREJO AND MEXICAN GOLD FIELDS.—The battery of this company yielded during the year to the end of June gross product realising £58,731, about one-third of which was in gold. After deducting working expenses, interest, premium on debentures redeemed, depreciation, etc., and adding transfer fees and interest, a net profit of £9,626 remains. Bringing the balance of £638 into the accounts, makes a total of £10,264, out of which it is proposed to add £955, to the reserve, making that fund £2,000, and to carry forward the balance. It is good policy not to weaken the balance-sheet, which is none too strong.

ANGLO-KLONDYKE MINING COMPANY.—Here is a Klondyke company that is actually winning a fair quantity of gold, which, together with some water that was sold, poured into the coffers £10,273 in the twelve months ending September 30, interest giving £861. Outgoings were not heavy, and a profit of £12,510 is exhibited, out of which, and the £3.808 brought forward, the directors recommend a dividend of 10 per cent.—20 per cent. was paid in 1902—which will absorb all but £180. No provision is made for depreciation, the directors offering the excuse that they do not consider this necessary, inasmuch as large sums have been written off in previous years. It is true the company has an abundance of liquid resources and no liabilities to speak of, but why not put aside a portion of the profits to reserve?

AUCKLAND PARK REAL ESTATE.—This is a South African concern, possessing property in Johannesburg. According to the balance-sheet—no profit and loss account being published—the London expenditure amounted to £2,268 in the past twelve months, whilst £1,559 was derived from interest and transfer fees showing an excess of outgo over income of £709. In Johannesburg the expenses totalled £3,455, and as the revenue was £1.393, the excess of the former amounted to £2,062, making an aggregate of £2,771. The company has at present plenty of cash, etc.

BOSTON CONSOLIDATED COPPER AND GOLD MINING COMPANY.—It is a brief report the directors issue to the end of September. The amount spent by the American company—practically the whole of whose share capital is held by the English company—upon the developments of the property, office, and general expenses, less the amount received for royalties, was $49,241. About seven months of the year were occupied in re-timbering the mine and preparing for the extraction of ore on a large scale. Owing to the time required for this work, the developments have not been so great as heretofore, but the managing director is able to report that 335,000 tons of ore, averaging 4 per cent. copper (in addition to gold and silver values), have been added to the reserves, which he now estimates amount to 1,668,716 tons, as against 1,013,716 tons a year ago. No profit and loss account is yet issued. The small sum of £126 was received from interest and transfer fees, administrative expenses taking £2,093. Financially, the company is not in too strong a position.

"LLOYD" COPPER COMPANY.—A doleful report is that issued by the directors of this company for the twelve months to the end of June, the results of working being seriously affected by a drought and the lower grade of ore treated. There were 46.365 tons dealt with, from which 1,257 tons of refined copper ingots were produced, realising £67 319. After providing for debenture interest £5.000, and writing off £12,126 for depreciation, there is a loss on the year of £11,145. Deducting this from the previous

credit balance there remains £10,732 to be carried forward. Prospects are now looking more hopeful. In the upper levels particularly good ore is now being mined in places where the lode was supposed to be worked out, "and there is every reason to believe," says the report, "that the full extent of the ore bodies has not yet been proved." Since the resumption of work in January last the reduction plants, both at the mine and refinery, have been working fairly satisfactorily. On the advice of the manager one of the water jacket furnaces has been sold to the Murrin Copper Mines, Limited, of Western Australia, the purchase price being paid in 7 per cent. first mortgage debentures, and fully-paid shares of that company. The latter is domiciled in the same offices in London and has similar officials. The financial position is none too strong, and the company ought certainly to have more cash in hand than £258. Debtors owe £24,504, against which there is an overdraft of £16,478 in London and of £3,255 in Australia, with sums of £1,142 and £1,667 owing to sundry creditors. There is a quantity of ore, matte, and copper in hand valued at £8,001.

Nerchinsk Gold Company.—The directors publish a lengthy report upon this company's concession written by Mr. Arthur L. Pearse, M.Inst.M.M., consulting engineer. He speaks favourably of the discovery of the Kluchi lode, and advises the concentration of work upon this, remarking:—"A strong lode of such widths and values as exist in the Kluchi, together with cheap labour and a healthy climate, are conditions tending to success in a mining undertaking. I do not hesitate to say that the prospect before the Kluchi lode is highly promising, and I look forward with confidence to its rapid development into a large and profitable mine."

Tomboy Gold Mines Company.—There were milled by this company in the year to the end of June 82,437 tons of ore, yielding bullion, which, with the concentrates, realised the sum of £150,084, and in addition £4,133 was received from sundry sources. On this the net profit was £45,894, £5 000 being allowed for depreciation on plant and machinery, assets that are included in the mine property, so that it is impossible to say whether the above allocation is adequate or not. The sum brought in was £1,092, and the directors say they would have paid a dividend out of the total, had it not been for a labour strike at the mine, compelling the mill to be shut down on September 1. Cable advices now to hand state that 30 stamps are in operation, over 200 men having returned to work. The balance-sheet calls for no criticism. The directors foresee the probability in twelve months' time of adding sixty more stamps to the present battery of sixty stamps. Prospects are spoken of in favourable terms.

Grand Central Mining Company.—This company's proportion of the proceeds of tailings treated by Charles Butter and Co., Limited, in the twelve months to the end of last August amounted to £6,643, and its half share on the mining operations carried on by the same company was £2,009. The bullion recovered realised £265, interest and dividend on Prietas Water Company shares brought in £1,623, and sale of stores and sundry receipts £393, making a total revenue of £10,933, on which the net profit was £716. This is added to the credit balance of £41,399, making £42,115, to be carried forward. Cash and short loans total £36,765, and debtors owe £3,575, against £143 owing to sundry creditors. Further examination of the Grand Central mine has disclosed payable ore, and in the Verde Groupe also pay ore has been found, on which facts the shareholders can base what hopes they please.

Queensland Copper Company.—In this company's financial year to the end of July its position improved appreciably. Some 11,152 tons of ore were raised from the Mount Perry mine, and 9,946 tons were treated, producing about 3,000 tons of matte, containing approximately 1,546 tons of copper, 900 oz. of gold, and 54,000 oz. of silver. Sales realised £57,853, and products in hand at the end of July are valued at £27,834, making a total of £85,687, reduced to £72,987 by deducting the value of the product in transit at the end of August, 1902. After crediting the accounts with stocks of ore at the end of the year (£14,095), £57 from sundry sources, and £17 from transfer fees, and deducting working costs, £4,076 for development redemption, £800 for depreciation, together with income-tax and administrative outgo, the net profit is £20,203. From this has to be deducted the debit of £4,179, and the six per cent. cumulative dividend on the preference shares to July 31, 1902, requiring £3,774, leaving an available balance of £12,249. Out of this the directors propose to pay the preference dividend for the past year, six per cent. on the ordinary shares, and to carry forward £1,358, though, looking at the finances, we think they would be better advised to withhold the ordinary dividend. Floating liabilities consist of £8,400 in bills payable, £920 drafts against product in transit, and £17,856 owing to sundry creditors, against which the company has £5,259 in cash, and sundry debtors for £1,410, with ore and products valued at £14,095. Moreover, the provision for depreciation is only about 5 per cent. To pay the dividends and provide extra remuneration for the directors will require the sum of £10,891.

New Elkhorn Mining Company.—At the latter end of 1900 this company decided to prosecute the development of its Leadville property, but to do this more capital was needed. Early in 1902 an attempt was made to raise this by an issue of preference shares, but it proved abortive. Accordingly the directors closed down the mine, and have been eking out the cash in the hope that neighbouring developments will prove its value. They say they can continue this policy for some years, whilst awaiting opportunities of disposing of the property to advantage. As an excuse for economy they are not convening a general meeting, but will do so if the shareholders wish, but this would be "an unnecessary expense in the present position of the company." They issue accounts to September 30, 1902, showing a loss of £7,452 on the year. For the past twelve months an unaudited statement is offered, for economy's sake, which shows the company has cash amounting to £1,140. Would it not be wiser to divide this money, and wind up the concern rather than await the remote chance of meeting with a likely purchaser of such a property?

MINING RETURNS.

Ankobra (Taquah and Abosso).—137 oz. of gold are being forwarded to London.

Antenior (Matabele) Gold.—Crushed 824 tons for 511 oz.; cyanide 644 tons for 145 oz.

Briseis Tin.—Black tin, 35 tons 18 cwts.

British Broken Hill Proprietary.—4,764 tons crude ore produced 809 tons concentrates, containing 469 tons lead and 21,843 oz. silver.

Brilliant Block Gold.—Value of bullion produced at cyanide works £350.

Caylloma Silver.—27,000 oz. fine silver, export ores; 11,000 oz. fine silver in bullion.

Chinese Engineering.—Output of 15,2000 tons; sales 13,000 tons; consumption 1,300 tons.

City and Suburban.—8,791 oz.; tons crushed 17,200.

Collie Proprietary Coalfields of W.A.—Output and sales, 9,221 tons.

Credo Gold Estates.—Crushed 20 tons, 62 oz.

Durban-Roodepoort.—7,065 tons, 3,405 oz.; tailings treated 5,060 tons, 929 oz.

East Murchison.—Tons of ore 4,648; ounces 1,123; tons of tailings, cyanide, 2,146; ounces 332.

El Oro Mining and Railway.—Crushed 8,004 tons; total production $113,789; profit $50,138; profit from railway was $11,000. Total $61,448 equal to £12,289.

Forbes Rhodesia.—Crushed 599 tons, 427 oz.

Fremantle Smelter.—Shipped 104 tons lead, value 2,500 oz. gold and 6,900 oz. silver.

French Rand.—Tons crushed 7,000, 552 oz.; tons tailings 4,590, 878 oz.

Golden Blocks (Taitapu).—Crushed 191 tons for 152 oz.

Geldenhuis Main Reef.—Mill, 796 oz.; cyanide 412 oz.; ore milled 2,746 tons, tailings treated, 2,315 tons.

Henry Nourse.—9,684 mill tons, 3,207 oz.; 6,714 tons cyanide, 1,961 oz.; 2,970 tons slimes, 310 oz.

Knight's Deep.—Crushed 14,365 tons, 4,118 oz., inclusive of 1,485 oz. from cyanide.

Komata Reefs.—Crushed 1,300 tons, bullion £3,700.

Langlaagte Estate.—Ore crushed, 20,786 tons; 5,001 oz. Concentrates, cyanide, tons treated 513, 847 oz. Tailings, cyanide, tons treated, 14,400, 1,911 oz.; total 7,750 oz.

Lloyd Copper.—Shipped 137 tons copper.

Montana.—Drumlummon Mine, Montana: 5,625 tons tailings and slimes, producing cyanide, $11,600; the shipping ore, etc., in process of realisation, $8,900. Total 810 oz. gold and 12,490 oz. silver, $20,500. Lucky Girl Group of Mines, Nevada: 1,600 tons ore, producing bullion bars and cyanide, 491 oz. gold and 357 oz. silver.

Mount Lyell.—Total quantity, 26,727 tons ore treated, being 20,167 tons from Mount Lyell Mine and 6,560 tons from North Mount Lyell Mine. In addition there have been treated 249 tons metal-bearing fluxes. Converters produced period 538 tons blister copper, containing: copper 531 tons, silver 58,644 oz., gold 1,208 oz.

New Heriot Gold.—3,352 oz., tons crushed 7,880.

New Modderfontein.—Crushed 8,559 tons, 3,074 oz.

New Queen.—270 tons crushed, 329 oz.; from public crushing £425.

New Ravenswood, Limited.—1,260 tons ore value £4,100; 310 tons concentrates, value £1,860.

Nigel.—2,417 oz., tons crushed 3,082.

Oroya Brownhill.—6,190 tons, 10,314 oz.

Palmarejo and Mexican Gold Fields.—Zapote Works: Crushed 3,400 tons, treated 2,800 tons, producing $20,590 gold, $44,790 silver.

Premier (Transvaal) Diamond.—17,549 loads treated, yielding 22,549½ carats diamonds.

Queensland Copper.—185 tons of matte, containing 128 tons copper, from 800 tons ore. Shipment on the 15th 200 tons matte.

St. John Del Rey.—Gold produced, £7,750.

Selukwe.—Crushed 5,010 tons, 2,540 oz.; treated by cyanide 6,270 tons, 1,240 oz.

South Randfontein.—Ore crushed 11,568 tons, 3,593 oz.; concentrates, cyanide, tons treated 1,063, 359 oz.; tailings, cyanide, tons treated 6,848, 1,063 oz.; slimes, tons treated 3,390, 259 oz.; total 5,274 oz.

Tyne Valley Colliery.—Output 7,489 tons.

Waihi.—19,318 tons, yielding, inclusive of concentrates, £50,743.

Wanderer (Selukwe).—10,767 tons, 1,978 oz.

Witbank Colliery.—Output 26,511 tons.

Witwatersrand Deep.—Tons crushed 7,112, 2,196 oz.; tons of sands and concentrates treated by cyanide, 5,487, 1,012 oz.; total 3,208 oz.

Ymir.—3,950 tons of ore, 987 oz.; 287 tons of concentrates shipped, value $8,500; cyanide plant 2,850 tons of tailings, producing bullion, value $2,250; sundry revenue $850.

RHODESIAN MINING RETURNS.

We have, with grief, to record another decline in the Rhodesian output, as the result of the stoppage of more mills. The return for November of 15,714 is the lowest of any month of the present year; is even lower, in fact, than that of the corresponding months of 1902 and 1901, and we doubt not it will be readily seized as an excuse to plead for Chinese labour. All the individual returns are poor, except that of the Surprise mine. For the eleven months of the year the return aggregates 213,122 oz., which is only moderately in advance of the figure for 1902. At the present rate of decline there will be no Rhodesian output at all this time next year.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Assam Bengal.—Dividend at the rate of 3 per cent. per annum, payable out of guaranteed interest.

Mediterranean.—Dividend of Lire 7.50 per share, payable Jan. 2, being first interim dividend for year 1903-4.

Pretoria-Pietersburg.—First distribution of £9 per share.

BANKS.

Bank of Roumania.—Interim dividend of 6s. per share.

National of New Zealand.—Interim dividend at the rate of 10 per cent. per annum for half-year to Sept. 30.

National of Scotland.—Dividend of 15 per cent. and bonus of 5 per cent., carrying forward £35,078.

INSURANCE.

London and Lancashire Life.—Half-yearly dividend to Dec. 31 at the rate of 8s. 3d. per share per annum, payable on Jan. 1, 1904.

Royal Exchange.—Interim dividend of 4 per cent.

MINES.

Ashanti Goldfields.—Dividend of 5s. per share.

Bonanza.—Interim dividend of 50 per cent. (10s. per share), for half-year ending Dec. 31.

Crown Deep.—Interim dividend of 30 per cent. (6s. per share).

Duke United.—Dividend of 6d. per share.

Geldenhuis Deep.—Interim dividend of 25 per cent. (5s. per share).

Great Fingall Consolidated.—Further interim dividend of 6s. per share.

Ida H. Gold.—Further interim dividend of 10 per cent., making 40 per cent. for 1903.

Langlaagte Estate and Gold.—Dividend of 20 per cent. per annum (2s. per share), for half-year ending Dec. 31.

Robinson Gold.—Interim dividend of 5⅓ per cent. (5s. 6d. per share), for half-year ending Dec. 31.

Rose Deep.—Interim dividend of 12½ per cent. (2s. 6d. per share).

MISCELLANEOUS.

Amazon Steam Navigation.—Dividend on account of current year of 2 per cent. (5s. per share), payable Jan. 5.

Assam Frontier Tea.—Interim dividend on preferred share capital at 6 per cent. per annum, payable 31st inst.

Barnum and Bailey.—Dividend of 10 per cent. on ordinary shares.

Cape Electric Tramways.—Interim dividend of 5 per cent., payable 24th inst.

Chicago Junction Railways and Union Stock Yards.—Dividends of 1½ per cent. on preferred and of 2 per cent. on common stock for three months ending Dec. 31.

Chinese Engineering.—Output of coal 15000 tons; sales 17,000 tons, consumption 1,300 tons.

East India Distilleries.—Dividend of 10⅓ per cent. on preference shares for year ended September 30, carrying forwad £5,713.

Eastern Extension, Australasian and China Telegraph.—Interim dividend for quarter ended Sept. 30 of 2s. 6d. per share, payable 16th prox.

Eastern Telegraph.—Dividend at the rate of 3½ per cent. per annum on preference stock for quarter ending Dec. 31, and interim dividend of 1¼ per cent. on ordinary stock for quarter ended Sept. 30.

Eastmans.—Dividend of 7 per cent., or 14s. per share, on preference shares, making, with 6 per cent. paid July 1, 13 per cent. for year.

Haig's Cooperage.—Dividend for past year of 6 per cent. on ordinary shares.

Hunters the Teamen.—Interim dividend for half-year ending Dec. 31 on ordinary shares at the rate of 10 per cent. per annum.

Kayser Ellison.—Interim dividend on ordinary shares at the rate of 5s. per share for six months ending Dec. 31.

Lautaro Nitrate.—Dividend of 3s. 6d. per share, payable Jan. 1, on coupons serial No. 21 of share warrants to bearer.

Natal Navigation Collieries and Estate.—Interim dividend for half-year to Dec. 31 at the rate of 10 per cent. per annum.

Palmer and Co.—Interim dividend at the rate of 6 per cent. per annum on preference and ordinary shares.

R. Waygood and Co.—Interim dividend at the rate of 5 per cent. per annum on ordinary shares.

Santa Rita Nitrate.—Interim dividend of 5 per cent. (5s. per share), for twelve months ending Dec. 31, 1903, payable 21st inst.

St. Pauli Breweries.—Dividend for year ended Sept. 30 at the rate of 4s. per share.

Spiers and Pond.—Interim dividend of 3s. per share; warrants will be posted on the 31st inst.

NEXT WEEK'S MEETINGS.

MONDAY, DECEMBER 21.

Abosso Gold Mining.—Cannon Street Hotel, noon.
Cornhill Contract Corporation.—Winchester House, noon.
D. Jones, Dickenson, and Co.—Winchester House, 3 p.m.
East Fingall Gold Mining.—Cannon Street Hotel, noon.
Enterprise Gold Mining and Estates.—Salisbury House, noon.
Fanti Corporation.—Cannon Street Hotel, 12.30 p.m.
Idaho Exploring.—Cannon Street Hotel, 11.30 a.m.
Ilford.—Winchester House, 2 p.m.
London and New York Investment.—Great Eastern Hotel, noon.
Manila Railway.—Winchester House, noon.
National Bank of Scotland.—Edinburgh, noon.
South African Territories.—Cannon Street Hotel, noon.
Smelting Corporation.—Cannon Street Hotel, 2 p.m.
Spies Petroleum.—Cannon Street Hotel, noon.
Town Properties of Western Australia.—Cannon Street Hotel, noon.

TUESDAY, DECEMBER 22.

Arauco Company.—Winchester House, noon.
Bolivar Railway.—Winchester House, 2 p.m.
Consolidated Kent Colliery Corporation.—Cannon Street Hotel, 2.30 p.m.
East India Distilleries Sugar Factories.—Cannon Street Hotel, noon.
Egyptian Delta Light Railway.—Winchester House, noon.
Gwalia Consolidated.—Winchester House, noon.
Hampton Plains Estate.—Cannon Street Hotel, 3.30 p.m.
Johannesburg Office and Safe Deposit.—Cannon Street Hotel, 2 p.m.
Klondike Bonanza.—Cannon Street Hotel, 12.30 p.m.
North Queensland Mortgage and Investment.—2, Suffolk Lane, 3 p.m.
North China Insurance.—Winchester House, 3 p.m.
Shell Transport and Trading.—Winchester House, 2.30 p.m.
Smelting and Refining Company of Australia.—Winchester House, 11 a.m.
Vogelstruis Estates and Gold Mines.—Winchester House, noon.
Van Diemen's Land.—Blomfield House, noon.
West of Scotland Fire Office.—Glasgow, noon.

WEDNESDAY, DECEMBER 23.

Consolidated Gold Mines of California.—Cannon Street Hotel, 2.30 p.m.
East Indian Railway.—Cannon Street Hotel, 1 p.m.
Indianapolis Breweries.—Winchester House, 1 p.m.
International Sponge Importers.—Winchester House, 2.30 p.m.
Luipaard's Vlei Estate and Gold Mining.—Cannon Street Hotel, noon.

Mr. Horace Frederick D'Oyly Moue, C.S.I., has been elected a director of the Bengal Central Railway Co., Limited, in place of Mr. George Christian, deceased.

COMPANY MEETING.

ASHANTI GOLDFIELDS CORPORATION.

The sixth annual general meeting was held on Wednesday, December 16, at the Holborn Restaurant, Mr. Frederick Gordon presiding.

In moving the adoption of the report, the Chairman congratulated the shareholders on the satisfactory position which the company had now attained. For the last six years the directors had been working to the best of their ability to produce satisfactory results. They had met with many difficulties and many disappointments, but they were glad to feel that they were now in smoother waters, and that their efforts would be rewarded. The board had had before them the question of the splitting of the shares, and as the result of their deliberations they had decided that the time had now arrived when such a policy could be carried into effect. A meeting would, therefore, be convened for the 31st inst. to sanction the division of the shares from 155,000 shares of £1 each into 775,000 shares of 4s. each. He believed that the proposal would meet with the approval of the shareholders.

Lord Duncannon seconded the resolution.

Mr. John W. Daw, who has recently visited the company's properties in West Africa, then addressed the meeting. After stating that the shareholders would be glad to hear that the mines had a plentiful supply of skilled and unskilled labour, and referring to the fact that the completion of the railway to the company's property had had the effect of materially reducing transport charges, he observed that before the issue of another report the directors believed that the Ayeinm property wou'd be producing good profits. The returns to date had been, comparatively speaking, low. To the end of the financial year June 30, 1902, a total of 1,443 tons had been crushed for 948 oz. During the financial year ended June 30 last 10,707 tons had been crushed for 6,280 oz. If the proceeds from the tailings were added, it showed that the value of the rock was almost 1¼ oz. per ton. Since July of this year 2,868 oz. had been obtained, and in a few months the directors hoped to reach the rich chutes from which the natives in the early days obtained their ore. No mining work had been done on the large reefs referred to in the earlier reports, as the work in hand had taken all their attention. They had, however, passed through a reef in their present workings which had a width of over 30 ft. This reef would receive immediate attention. The 40-stamp mill had been used for crushing the rock from development work, but as such work was fast approaching an end arrangements had been made for the conversion of the stamps into heavier ones. The cyanide plant had been shipped, and would be ready to start at the same time. In the Obuassi section they had a mine with workings extending over half-a-mile in length, and the results of recent developments showed an improvement far beyond the early expectations of the board. He thought he could promise the shareholders that this mine would in future give an average result of close on 1½ oz. per ton. Previous to June 30. 1902, 5,704 tons had been crushed for 5,242 oz. During the financial year under review about 9,698 tons had been crushed for 6,357 oz., or a total of 15,402 tons for 11,599 oz., which was equal to 15 dwts. per ton over the plates. Since July of this year the average over the plates had been nearly 1½ oz. per ton. The tailings were about 7 dwts. per ton. Every effort was being made to push on with operations on the valuable Obuassi reef. Previous to June 30, 1902, 6,873 tons had been crushed for 15,548 oz. During the last financial year 3,913 tons were treated for 10,363 oz., making a total of 10,786 tons for 25.911 oz. Since July of this year the returns over the plates had been upwards of 3 oz. per ton. In fact, including the tailings, the average value of all the ore broken from the commencement was more than 3 oz. per ton. Having referred to the work done on the Ashanti and Insintsiam reefs, he said that the erection of the 50-stamp mill at the Obuassi mine could be concluded in February next, but, seeing that it would be impossible to complete the cyanide plant until the latter end of April, he had arranged to start the entire installation on May 1. The combined power would then enable the management to crush at least 10,000 tons a month, which, taking a conservative view of the quartz, he looked forward to producing from 14,000 oz. to 15,000 oz. of gold monthly. The resolution was carried unanimously.

THE CAPE COPPER COMPANY.

The ordinary general meeting was held on Wednesday, December 16, at Cannon Street Hotel. Mr. John E. Champney presided, the chairman, Mr. E. A. Pontifex, who had held that position for 38 years, being unable to do so owing to loss of voice, and, in moving the adoption of the report, congratulated the shareholders on the greatly improved financial position of the company as compared with last year. They then had to report a loss upon the year's work of £6,494, whereas this year they had made a profit of £95.979, a difference of £102,473 to the good. Whereas last year the liabilities amounted to £143,757, they now amounted only to £20,675, showing a betterment of £123,002. In like manner the cash balances and money on deposit, which were in 1902 £16.745, were this year £60.292, an improvement of £43,547. They were owed last year by their debtors £60,834; in the present year the figure was £73,888. On the other hand their investments were £5.000 less, and their stock of copper also less by £110.474. Coming to the profit and loss account, the increase of £102,472. as compared with the previous year. was made up of £71.009 improvement in the ore returns. This would have been further increased had the valuations of the stocks of ore been made on the same basis as in previous years. They had, however, felt that hitherto the valuations were made on a less safe principle being taken at the price of metal at the day. They had now taken them at the cost price. But for this their profits would have been increased by about £20,000. With regard to their claims for damage to the company's property, amounting to £27,891, they were made as to £8,000 upon the Imperial Government for work done in landing troops and so on, and as to £19,000 upon the Colonial Government for damage to the railway and mining machinery and plant. The position when he took up these compensation claims was that the British Government had refused their claims entirely, under the idea that the company had included all indirect and consequential damages. They were able to disabuse the Government of that idea. He feared that their indirect losses must have amounted to £70,000 or even £100,000. However, that was gone. The whole matter had been thoroughly gone into; a sum of £1,056 had already been paid in the Colony, and he was glad to be able to inform them that they had received an intimation that the Army auditor had recommended a further payment of £5.463 for the work done in landing the troops and the like. As regards the claims on the Cape Government, they had had a visit from the Government assessors, who inspected the railway and the various plant injured, and he thought they were on the whole satisfied that the claims had not been overstated. Last week the board were much pleased to receive a cablegram from their superintendent in the Colony informing them that the Cape Government had paid a sum of £15,000 on account of compensation claims, so that they had reason to hope that these claims were in a fair state of adjustment. The returns from the Ookiep mine in 1902 were 15,075 tons, of 18.52 per cent. dry assay, representing 2,791 tons of fine copper. For 1903 they were 18,009 tons, of 17.40 per cent. assay, equal to 3,134 tons of copper, being an increase of 2,934 tons of ore, or of 342 tons of copper. At Nababeep in 1902 610 tons of copper were produced. in 1903 331 tons, a decrease of 279 tons, due to the Boer raid and consequent stoppage of the works. The smelting was not resumed at Nababeep until the month of February last. The reserves in the mines in Africa had somewhat increased, those at Ookiep from 9,024 tons in 1902 to 9 772 tons in 1903, and at Nababeep from 195,000 tons in 1902 to 210,000 tons in 1903. The increase in the reserves at Ookiep were chiefly due to a fall of rock, which revealed a large quantity of ore that had not been previously taken into computation. The increase in the reserves pointed to the fact that the estimates were always framed on a very conservative basis. The Tilt Cove establishment made, up to the time included in the accounts, a profit of about £15,000 for distribution between the two companies, but this might be modified by the work since performed up to the 31st of the present month. They had entered into a new smelting contract with the Namaqua Company for the smelting of the ores that that the lotter company might raise during the next four years. That supply would keep their smelting works fully employed, and he hoped might leave some profit.

Mr. Pontifex seconded the motion, which was unanimously adopted, and some formal business was afterwards transacted.

ELYSEE PALACE HOTEL.

The sixth annual general meeting of the Elysee Palace Hotel Co., Limited, was held on Tuesday, December 15, at Cannon Street Hotel E.C., Sir Francis Henry Evans, Bart., K.C.M.G., M.P., presiding.

The Secretary having read the notice convening the meeting,

The Chairman said: We meet again to refer to the annual accounts, and to pass them if we see fit. This is the fourth year of the working of this company, and I can only say that it is in a very satisfactory condition. We have done more business, we have let more rooms, we have more guests, and we have more taxes. If I could have left out the last, everything would have been more satisfactory, but the taxes have increased considerably; it is owing to the taxes, in fact, that we do not show a better result, although we have made more profit. The Chairman then referred to the recent death of Sir John Blundell Maple, who had been associated with the company from the start, and whose loss would be regretted by all the shareholders. Proceeding, he said: The trading profit, after charging £11,928 for maintenance and upkeep of the property, is £40,356, against £39,143 last year, and the net profit, after deducting the fixed charges and administration expenses, is £18,152, against £17,529 last year, which, with £2,798 brought over from the previous year, give a total available balance of £24,950, against £24,337 last year. We recommend, as you will see, a dividend of 6½ per cent. on the ordinary shares, which will absorb £16,000 of that money. The deferred shares being entitled to an amount equal to that paid to the ordinary shares over 6 per cent., the directors propose to distribute the sum of £1,250 amongst the holders of the deferred shares. The balance of £7,350 will be applied as follows:—£525 to the purposes of the debenture stock redemption fund, leaving £6.825 to be carried forward, against £6,798 last year. You see that we have already begun to pay off the debenture stock which we recently issued. The next clause in the report refers to the deferred shares. These deferred shares were subscribed for originally by those who subscribed for the capital of the company, and that is how they are held. The rights which these shareholders had to the surplus profits over 6 per cent., and also the ulterior rights which they possess in any further extension of the Elysee Palace Hotel, and of anything else which they were interested in, really made it almost necessary, in the best interests of the company, to get rid of them. We have been negotiating for two years to try to come to some settlement, and now we have arrived at an agreement between the very large owners of the two classes of the shares to give them £12 in ordinary shares for their £1 share as originally subscribed. Having gone through the accounts, and

explained the various items to the meeting, the Chairman then moved the adoption of the report and the statement of accounts.

Monsieur Georges Casimir Lambert Nagelmackers seconded the motion, which, after the Chairman had replied to several questions, was carried unanimously.

Sir Francis H. Evans was then re-elected a director, and Mr. Chas. Hodges elected to fill the vacancy left by the death of Sir John Blundell Maple.

On the motion of Mr. Jarvis, Messrs. C. F. Kemp, Sons and Co. were re-elected auditors.

An extraordinary general meeting was then held for the purpose of passing the following resolutions:—

"That the draft proposed agreement expressed to be made between the Elysee Palace Hotel Co., Limited, of the one part and Mr. Edward Herbert, on behalf of himself and all other holders of deferred shares in the capital of the company, of the other part be and the same is approved." "That the Bill submitted to this meeting intituled 'A Bill to enable the Elysee Palace Hotel Co., Limited, to issue paid-up ordinary shares in satisfaction of the deferred shares, to provide for the extinction of such deferred shares, and for other purposes,' subject to such additions, alterations or variations as are made, or Parliament may think fit to make therein, be and the same is hereby approved."

The resolutions were unanimously passed.

A vote of thanks was given to the Chairman, and the proceedings terminated.

CHAMPION REEF GOLD MINING COMPANY OF INDIA.

The fifteenth ordinary general meeting was held on Wednesday, December 16, at Cannon Street Hotel.

Sir Charles Tennant presided and moved the adoption of the report. He stated that the company's progress had been uninterrupted throughout the year. Their operations had been on an increased scale in all directions, more development work had been accomplished, the reserves of ore had been largely added to, and a greater quantity of quartz and tailings handled, while the returns of gold had been considerably augmented, resulting in a substantial augmentation in the profits and in the dividends distributed. From 173,629 tons of quartz crushed in the mills 174,115 oz. of bar gold were obtained, giving an average yield of 19 dwts. 21 grs. per ton, while 32,335 oz. were extracted by the cyanide process from 246,300 tons of tailings, an average yield of 2 dwts. 15 grs. per ton. These figures, compared with those of last year, showed a material improvement. Better results had, however, been obtained from the batteries, an average of over 14,000 tons per month having been crushed. With regard to tailings, the company had had the advantage of the addition to their cyanide plant, erected in 1902, for the whole of the year, so that the total quantity treated had been maintained at an average of 20,000 tons per month. The yield of bar gold per ton from the quartz and tailings together equalled 1 oz. 2 dwts. 12 grs., or six grains per ton less than was shown last year. The grand total of the returns for the year amounted to 206,450 oz. of bar gold of the value of £782,756. After deducting royalty payable under the leases, and adding the other receipts shown in the income and expenditure account, there was an income of £749,419. The total costs charged against this income amounted to £308,078. It was a matter of congratulation that the company's costs per ton had steadily decreased year by year, and in the present accounts further reductions were shown. The mining and milling costs were 2s. 9d. per ton, less than last year's and 7s. 6d. per ton less than those of the previous twelve months. The tailings costs were down 1s. 1d. per ton. The comparatively large reduction in the tailings costs was principally owing to the company no longer having to pay royalty to the Cassel Company on the gold produced by the cyanide process. With the large production of gold on the one hand and the saving of cost on the other, the board had been able to realise a profit of £441,341. This year the company benefited by the reduction in the rate of income-tax to the extent of about £6,000. The interim dividends paid in May and August absorbed £236,500, and the dividends, the declaration of which the board now recommended, of 6s. 6d. per share on the fully-paid shares and 4s. 4d. on the partly-paid shares, would require a further £168,331, leaving £1,591 to be carried forward. The total amount paid during the year, excluding the new shares, which did not rank for the interim dividends, would be 16s. 6d. per share, or 165 per cent. This result surpassed by 35 per cent. the company's record of 130 per cent. in 1899-1900, and established a new record for the Kolar field. The issue of the new shares was a great success, and the whole of them had been allotted. The report called attention to the strong financial position of the company. The liquid assets amounted to £368,841 and the liabilities to £71,277. He thought that the shareholders would agree that a sound course had been taken in applying the sum of £148,500, received as premiums on shares issued in 1901, to the reduction of the amount standing at the debit of mining rigts and leases, buildings, machinery, and plant, furniture, and costs of shafts. The developments during the year had resulted in laying open further large reserves of ore. These were now estimated at 366,000 tons.

Mr. Edgar Taylor seconded the motion and gave a detailed account of the progress of the mine.

The motion was adopted.

Resolutions were also passed to raise the directors' remuneration to £3,000, to give £5,000 to the staff in India and at home, and to allocate a sum of 250 guineas for the purchase of a piece of plate or jewellery for presentation to the chairman.

OCEANA CONSOLIDATED COMPANY.

The seventh annual meeting was held on Thursday, December 17, at Winchester House, Mr. H. Pasteur presiding.

The Chairman, in moving the adoption of the report, observed that the past year had been one of depression and stagnation, and the shares of most undertakings connected with South Africa had suffered a more or less severe depreciation. The shareholders would not be surprised, therefore, to find that the accounts were less favourable than they could have wished, and to be informed that the board did not see their way to recommend the payment of a dividend. The sum standing at the credit of profit and loss account on June 30 last was sufficient to provide a dividend of 5 per cent., but as a measure of prudence, and in view of the opportunities which a resumption of activity in South Africa would offer for the profitable employment of capital, it was thought wiser to retain the balance in hand for the present. Among their investments at cost, aggregating £1,512,652, were railway shares and debentures to the amount of £338,643. This item was now undergoing a very large reduction by the repayment by Government of the debentures of the Pretoria-Pietersburg Railway Company, and a first dividend of £9 per share had been received from the liquidators of the railway company on the £10 shares held by the Oceana Company. It was to be hoped that a more just and equitable view would be taken by the High Court at Pretoria on the question of the award in favour of the contractors than the shabby and, in the board's opinion, unjust decision of the Colonial Office in withholding £150,000 from the shareholders. In a case where Government were expropriating a valuable undertaking, and had actually refused arbitration, the shareholders were fully entitled to the immediate repayment of their share capital, with interest and bonus, in the terms of the concession, and this ought to debar the Government from reopening the question of the merits of a debt which the company has been compelled to pay by reason of an arbitrary award having been given against them. In spite of the severe depression which had existed, the market value of this company's quoted investments on June 30 last showed on appreciation over cost price, and as to the unquoted ones, the board were satisfied that they fully represented the amount at which they stood in the balance-sheet. With regard to the 1,038,000 acres of land which the company held in the Transvaal, he stated that it figured in the accounts at only a little more than 1s. per share, and it was an asset of great potentialities. The dividends and interest received during the past year amounted to £35,642, while the profit from realisations of shares and investments came to £23,269. Including the sum brought forward, the credit balance at the date of making up the accounts was £103,157. He then dealt with the company's most important mining investments, and said that their interest in the Van Ryn mine was between one-fifth and one-sixth of the total share capital of £500,000. It was hoped that within three or four months that property would be producing monthly profits of £12,000 to £15,000, and again be in the list of dividend-paying mines. The work done by the Welgedacht Exploration Company, the Oceana Minerals Company, and other enterprises having been explained, the Chairman briefly reviewed the leading interests of the company outside the Transvaal. In Portuguese East Africa the Mocambique Company were, he stated, progressing steadily, and on that company's territory, as well as on a portion of the Flotilla Company's land, important experiments were being made in cotton-growing. In Abyssinia the railway between Djibouti, on the Red Sea in which the company is interested through the Ethiopian Railway Trust, is now running to Dire Daouah, a distance of 306 kilometres, the latter place being the terminus at the foot of the Harrar plateau. Negotiations, the Chairman also stated, are pending between the railway company and the French and Abyssinian Governments for the extension of the line to Addis Abeba, which, if successful, will add greatly to the value of the undertaking. In Egypt shares had been purchased, on favourable terms, in the New Egyptian Company, and they had also become interested in the Soudan Development and Exploitation Company. As to their large interest in West Africa, he stated that both the Taquah and Abosso Company and the Abosso Gold Mines, Limited, were approaching the time when profitable results from crushing operations could be looked forward to. In conclusion, he said that there was every reason to be satisfied with the prospects of most of their interests in Africa. Good progress had been made during the past twelve months, and with the resources at their disposal—which now amounted in cash assets to about £46,000—and an improvement in business he trusted that the coming year would produce good results for the company.

Mr. T. F. Dalglish seconded the motion. A long discussion followed, in the course of which several shareholders complained of the non-payment of a dividend, and urged that the policy of continually widening the operations of the company should be abandoned.

Mr. Lea Smith said that he thought the board were acting properly in husbanding the company's cash resources for the moment. At most the shareholders could not expect more than 1s. per share, and the money could probably be used by the directors to the future advantage of all concerned.

Mr. J. Secar (a director) replied to the discussion on behalf of the Chairman. He said that when it was decided to pay no dividend the large sum received from the Pretoria-Pietersburg Railway Company had not been paid. Should there be no set-back in the value of investments, the Chairman authorised him to say that a dividend of 5 per cent. would probably be paid during the next few months. (Hear, hear.)

The report was adopted, and, on the motion of Mr. E. Head, a resolution was subsequently passed, with several dissentients, condemning the dilatoriness of the Government in dealing with the labour question in South Africa.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Nov. 13, $12,592; increase, $4,337. Aggregate from January 1, $553,063; increase, $36,002.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Nov. 14, Rs. 46,578; increase, Rs. 9,291. Aggregate from July 1, Rs. 7,28,961; increase, Rs. 74,609.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Nov. 14, Rs. 12,717; increase, Rs. 5,774. Aggregate from July 1, Rs. 1,82,904; increase, Rs. 55,132.

Bengal Central Railway.—Traffic receipts for week ending Nov. 21, Rs. 34,142; increase, Rs. 6,230. Aggregate from July 1, Rs. 725,942; increase, Rs. 149,503.

Canadian Northern Railway.—Traffic receipts for week ended November 30, $89,600; increase, $19,700. Total, from July 1, $1,448,700; increase, $526,200.

THE BARNATO CONSOLIDATED MINES LIMITED.

REPORT OF THE DIRECTORS for the Year ending 31st October, 1903.

Submitted to the Shareholders at the Annual General Meeting held at Johannesburg, on the 17th November, 1903.

TO THE SHAREHOLDERS,

Gentlemen,—Your Directors have pleasure in submitting herewith their Report, together with the Balance-sheet and Profit and Loss Account, duly audited, for the year ended 31st October, 1903.

CAPITAL.

The Capital of the Company remains as before, namely, £1,500,000 in £1 shares, of which 1,352,500 shares are issued and 147,500 are in reserve.

VENDORS' INTEREST.

In terms of the policy foreshadowed at your last Annual Meeting, and in accordance with the resolution passed at the Special General Meeting, £50,000 has been written off the Vendors' Lien Account, which makes this item now stand at £150,000.

PROPERTIES.

The following schedule shows that very little change has taken place in regard to the Company's interests in claims and properties:—

SCHEDULE OF PROPERTIES AT 31st OCTOBER, 1903.

NAME OF PROPERTY.	Extent at 31/10/02.	Since Sold or Floated	Extent at 31/10/03.	Interest held by Company.
Alpha (W.W.R.)	37	—	37	Whole
Alpine (Moodie's)	19	—	19	"
Barraud and Dirksen (W.W.R.)	[illegible]	—	[illegible]	"
Max Levi (W.W.R.)	1	—	1	"
Susan Jane (W.W.R.)	13	—	13	"
Molly Nigel (Heidelberg)	215	—	215	"
Croesus D.L., No. 1 (W.W.R.) & W. Right	67	—	[illegible] & W. Right	"
Croesus D.L., No. 2 (W.W.R.)	144	—	144	75%
Langlaagte (W.W.R.) & W. Right	13	—	13 & W. Right	Whole
Vogelstruisfontein (W.W.R.)	[illegible]	—	[illegible]	"
Princess (Leeuwpoort, W.W.R.)	107	—	107	"
Rietfontein Dip (W.W.R.)	163	—	163	"
Klippoortje (W.W.R.)	[illegible]	64	—	—
Zwaartkoppies (Moodie's)	80	—	[illegible]	"
North Alpine & Princess (Moodie's)	25	—	[illegible]	75%
Cohen's Claims (Barberton) & W. Right	101	—	101 & W. Right	75%
Berlien's Claims (Nigel)	88	—	[illegible]	2/3rds.
Goodman and Potter (Nigel)	60	—	[illegible]	1/3rd.
Morse Block (Nigel)	71	—	71	1/3rd.
Chimes Mines Claims	—	—	5	Whole
Total	1665		1606	

From the foregoing it will be seen that 64 claims on Klippoortje are not now included in the schedule, these claims having been converted into shares in the Angelo South Mines, Ltd. It will also be seen that five claims of the Chimes Mines, Ltd., have been added, these representing the balance of claims left over after the absorption of the Chimes Min s' property by the Van Ryn Deep, Ltd., and Kleinfontein Deep, Ltd.; the purchase price paid by your Company for these five claims was £1,000.

SHAREHOLDINGS.

The following statement shows the present biddings as compared with the shares held at 31st October, 1902:—

COMPANY.	Holding 31/10/02.	Since acquired.	Since disposed of.	Holding 31/10/03.
Farm Leeuwpoort, Witwatersrand—				
Rand Central G. Mines, Ltd.	125,000	—	500	124,500
B. L. K. Syndicate, Limited	10,000	—	—	10,000
Leeuwpoort G. M. Co., Ltd.	6,267	—	—	6,267
Sub-Nigel, Limited	[illegible]	—	—	250
Main Reef West, Limited	64,286	—	11,508	52,778
Lindum Gold Mines, Limited	67,337	—	67,337	Nil.
Jumpers Deep, Limited	19,304	—	—	19,304
Transvaal Estates and Development Co., Ltd.	Nil.	6,489	—	6,489
Ferreira Deep, Limited	251,100	—	—	251,100
Chimes Mines, Limited	325,000	—	325,000	Nil.
Delagoa Bay Lands Syndicate, Ltd.	7,500	—	—	7,500
Normandy Exploration Co., Ltd.	64,890	—	64,890	Nil.
Orkney G. M. Company, Limited	100,000	—	—	100,000
Kleinfontein Deep, Limited	100,000	209,501	—	309,501
Randfontein Deep, Limited	15,000	33,668	—	48,668
Van Ryn Deep, Limited	100,000	264,499	—	364,499
Angelo South Mines, Limited	Nil.	93,644	—	93,644

RAND CENTRAL GOLD MINES, LTD.

Your shareholding has been reduced by 500 shares in part fulfilment of the terms of the contract of flotation of this Company, and now stands at 124,500 shares. No work has yet been done on this property, but it is hoped that conditions will improve before long, so as to warrant the anticipation your Directors entertained last year that active exploitation would be commenced.

B. L. K. SYNDICATE, LTD.

Your interest in this Syndicate remains unaltered, viz., 10,000 shares out of an issued Capital of £20,000.

LEEUWPOORT GOLD MINING COMPANY, LIMITED.

Your holding of 6,267 shares is unaltered. This Company has not yet recommenced work.

MAIN REEF WEST, LIMITED.

It will be seen that your holding in the Main Reef West, Ltd., has been reduced to 52,778 shares by realisation of 11,508 shares, the profit on which amounted to £18,419 0s. 4d., and appears in the Profit and Loss Account. The Chairman of the Company, in addressing the Shareholders in August last, stated that "the continuance of the insufficient Native labour supply has rendered it impracticable to resume sinking operations. When labour is obtainable, it will take a comparatively short time to reach the reef, and thus allow the commencement of active development."

LINDUM GOLD MINES, LIMITED.

Your holding in this Company has been converted into Shares in the Randfontein Deep, Limited.

JUMPERS DEEP, LIMITED.

The interest held by your Company in the Jumpers Deep is unchanged, viz., 19,304 shares. This Company is crushing and has an average of 100 stamps at work. There has been no dividend to report to you as yet, but, as the present monthly profits exceed £7,000, it is hoped that before long there will be a return on your Company's investment. The development has recently improved, and increased profits may confidently be anticipated.

CHIMES MINES, LIMITED.

This Company has merged into the Van Ryn Deep, Limited, and the Kleinfontein Deep, Limited, and your holding converted into shares of these two Companies.

NORMANDY EXPLORATION COMPANY LIMITED.

The assets of this Company have been sold to the Transvaal Estates and Development Company, Ltd., and your interest converted accordingly.

TRANSVAAL ESTATES AND DEVELOPMENT COMPANY, LTD.

For your interest in the Normandy Exploration Company you received 6,489 shares in the above Company. The Transvaal Estates and Development Company, Ltd., owns a large number of farms throughout the Transvaal, particularly in the North, and an expedition is now prospecting the properties, and there have been indications of minerals and diamonds. Favourable reports are also to hand of the highly fertile character of some of the farms.

ANGELO SOUTH MINES, LTD.

Your 64 claims on Klippoortje have been sold to this Company for 60,000 shares, in addition to which you subscribed for 33,644 shares at 30s., making a total holding of 93,644 shares out of an issued Capital of £501,000. This Company owns 319 claims on Klippoortje, No. 148, and Driefontein No. 176, in the neighbourhood of Boksburg, and on the dip of the Driefontein Deep, Limited, and Angelo Deep, Limited.

RANDFONTEIN DEEP, LIMITED.

Your holding of 67,337 shares in the Lindum Gold Mines, Limited, has been exchanged for 33,668 shares, now making your holding 48,668 shares in the above Company, which took over the claims of the Lindum and other adjoining claims, the total area being 1,063 claims. Boring operations have been in hand for some months, and it is expected that the dip of the Randfontein Reefs will very shortly be encountered. The hole is down to a depth of over 4,000 feet.

VAN RYN DEEP, LIMITED, AND KLEINFONTEIN DEEP, LIMITED.

You will see that your holding of 325,000 Chimes Mines' shares is now disposed of, having been exchanged for shares in the above two Companies on their taking over the claims of the Chimes Mines, Ltd. The shares received in exchange were 114,075 Kleinfontein Deeps and 359,925 Van Ryn Deeps, but, as reported to you last year, an exchange was made with the Anglo-French Exploration Company, Limited, by which you received 95,426 Kleinfontein Deeps for the same number of Van Ryn Deeps. 100,000 shares in each Company have been subscribed for at £1, your holdings, therefore, being as follow:—

Kleinfontein Deep, Ltd. 309,501
Van Ryn Deep, Ltd. 364,499

These Companies have joined in a scheme with the New Kleinfontein Company, Ltd., Benoni Gold Mines, Ltd., and the Apex Mines, Ltd., for the centralisation of their workshops, buildings, etc., under which organisation a great saving in the initial outlay and working costs of the Companies will be effected, but the scheme does not affect the individual reduction plants of the Companies concerned.

A borehole is being put down on joint account for the Kleinfontein Deep, Ltd., and the Van Ryn Deep, Ltd., for the purpose of accurately determining the position of the proposed vertical shafts of both Companies. The hole is down to a depth of over 1,300 feet, and should strike the reef at an early date.

DELAGOA BAY LANDS SYNDICATE, LTD.

Your interest in this Syndicate remains the same, viz., 7,500 shares out of an issued capital of £60,000. The Syndicate has now satisfactorily settled the question of its titles, and it is hoped that building operations will be commenced before long and good returns obtained from the valuable properties it possesses in Lourenco Marques and neighbourhood.

FERREIRA DEEP, LIMITED.

Your holding still stands at 251,100 shares. This Company is crushing with 60 stamps, and profits of some 25s. per ton are being earned, and these profits in course of time will be considerably increased.

About 9,000 tons per month are being crushed. During the year a dividend of 10 per cent. has been declared, the amount accruing to your Company being £25,110.

The Investors' Review.

Farewell 1903.

Most people will be thankful to bid good-bye to this year. It has not been a prosperous one whether in general business, in finance, or the Money market. The trade of the country has been good so far as its imports and exports go, but domestic business has been indifferent and in many directions poor. It may be said that as the year has neared its end trade has come to be conducted with increasing langour, and the margin of profit has tended to grow finer. This is not to be wondered at when we consider that the country is now beginning to feel the effects of its recent outburst of imperial extravagance, and that it is still loaded with taxation to an amount far beyond the capacity of the masses to pay. Our Government has ceased altogether to look to the well-being of the people, and, like the fool, its eyes are still in the ends of the earth. We may close the year in thankfulness that throughout it peace has been preserved, that we have not even had another Venezuela episode to disturb us, but wars and rumours of wars are plentiful enough, and we ourselves have Somaliland and a Tibet expedition on hand. There is no indication of a return to sanity amongst our politicians at any point, on the contrary many of them are still doing their utmost to stir up trouble, some we fear even endeavouring to egg Japan on to try issues with Russia in the arena of blood.

We care not to dwell upon these things, prefer rather to hope that sanity may be resuming its sway over the minds of the people, and that a real impetus towards economy in domestic administration as well as towards the cultivation of amity with other nations may spring out of the present dreariness and lassitude, natural after a time of excitement and profligacy. But there is not much to encourage people of thrift at the present time, and the year now closing has been a gloomy one enough for many classes of investors. In nearly all directions they have had to suffer losses of capital through falling prices, and not least in securities hitherto amongst the most trusted we possess. Everybody knows the sad career of the Consol market. At the beginning of the year the cash price of the stock was 93½, and it is now about 88, but during the year it fell to 86⅞. Many other trusted stocks have gone down, if not always in proportion, generally to an extent which has meant loss of capital and paralysis of energy to tens of thousands of quiet people who know nothing of "Kaffir Circuses" or "Jungles," or of wild gambles of any kind. The fall in the price of North-Western Railway stock since the beginning of the year has been about £25. North-Eastern, too, has fallen some £12, Midland preferred 5½, and the deferred 6½. Most industrial securities have likewise suffered, but happily not all. In spite of the outcry about the decay of our iron and steel industries the shares of the leading companies in that department of our industrial life have kept up astonishingly well. It is the over-capitalised things that have suffered, or securities such as those of the London water companies that were driven up in price by an always narrow speculative influence on the theory that the companies would be able to extract their own terms from the new Water Board, and the ratepayer. They have not done this, but only in one instance has the decline in the price of Water stocks compared with the beginning of the year been really of a lugubrious description. New River new stock has dropped £70, but all the others have recovered from the lowest figures, and Grand Junction stocks are at better prices now than they were a year back. No doubt the January prices were not the highest of the year; still, to the investor who has held for longer periods the loss has not been so disastrous as the mere movements induced by speculators might lead one to suppose.

Here and there, too, there are encouraging facts which ought not to be lost sight of. The Gas Light Company's stock, for example, is higher in price now than it was twelve months back, and there has been a cheering recovery in the stocks of our great telegraph companies, thanks in great measure to the disappearance of the Marconi scare. Eastern Telegraph ordinary stock is now £7 higher than it was a year ago, and the shares of the Extention Company have risen nearly £1. Anglo-American Telegraph preferred stock even is £3 higher and the deferred stock of the National Telephone Company, a very good market barometer, has advanced quite £10. All is not black, therefore, even in this direction, and in the market for Foreign Government securities there has been a well sustained improvement in most South American securities, in Argentine and Brazilian especially. All this backs up the continual teaching of this REVIEW that investors should spread their risks so as to have some chance of compensation in one direction when losses occur in another.

On the whole, however, the year has been gloomy for investors of all kinds, and perhaps more so for speculative investors, at least in United States securities, than anywhere else. The monster combinations in America have more than once almost brought the credit machinery centring in New York to a standstill, and one cannot even now abstain from wondering that such an event as the collapse in United States Steel securities should have occurred without bringing disaster upon the whole market. At the beginning of the year the common stock of that gigantic concern was quoted at 37¾, or about 27 more than it is now, and the preferred is quite $32 down, comparing the latest prices with the earliest we have for the year, a comparison which does not give the lowest prices, for the preferred stock has been 4 or 5 below the quotation now ruling. And the fall in it from the top has been upwards of 50 per cent.

Most significent of all of the strain upon our credit market has been the history of new capital issues during the year. At first the market went bravely on as if nothing had hap-

pened, as if the successive issues of stock to raise money for the war had all been absorbed by investors in a manner that implied an inexhaustible supply of savings seeking investment. That attitude culminated in the wild rush of applications for the £30,000,000 of Transvaal 3 per cent. guaranteed stock, issued in the beginning of May, which was subscribed for upwards of thirty-nine times over—£1,174 millions having been offered—and the City was jubilant, but the whole display was a mere phantasia of demoralised gambling, and it was not long before the stock dropped to a discount because the people who got it were many of them forced to sell. Lumps of this security and of earlier war issues of the Government still lie upon the market, and so clogged did it become that in the autumn the Consol jobbers struck against further underwriting of new creations, confessing thus that their facilities for creating credit were exhausted. Hence throughout the year there has really been great difficulty in placing new securities. The market has been dammed up with unsold issues of previous years and remains so. One result of this choked condition has been an advance in the underwriting commission. For a long time that was 1 per cent. upon securities deemed first class, Colonial loans and things of that kind, but now it is 1½ and 2 per cent., with difficulty even then in getting the lists filled. We cannot profess sorrow at this state of things. Only by bringing home a sense of the poverty and exhausted condition of the investment market to the borrowers of all classes can we hope to drive into their minds a sense of the necessity for economy. Johannesburg, for example, began by talking of raising £4,500,000, and then came down to £3,000,000, only in the end to have to be satisfied with £1,500,000 as a beginning. Even that amount the public did not take up. Every capital raising agency, whether Home Municipal Corporations, Home Railways, or great Industrial companies, finds it hard to get money, and we are glad it should be so. A few years of this experience, irksome though it may be for the mere credit jobber—the man who runs about placing loans and share issues with his clients, the dealer in the market who buys and sells, and the great miscellaneous swarm of premium hunters—it is good for business morals and wholesome as a check upon the universal tendency to extravagance.

Our Money market has had no sensation during the year, for we have only had three changes in the Bank rate during its course. The year began with a 4 per cent. rate which lasted until May 21, when it became 3½ per cent. It was further reduced to 3 per cent. on June 18, but there the fall stopped, and on September 3 the 4 per cent. rate was restored. The market may consider itself lucky that no higher rate has been imposed. Some weeks ago it looked as if the year could not be lived out without a further advance to 5 per cent., but by skilful management, the help of gold from India, and the increasing supplies from South Africa available for foreign buyers, this has been averted. Nevertheless, the Money Market is not now strong, the banking reserve having come down to £20,000,000, and the stock of gold having steadily dwindled until it is now over £5,000,000 less than when the Bank rate was raised to 4 per cent. in the beginning of September. Open market rates have as usual been on the average below that of the Bank of England, but money has never at any time been really abundant and reliably cheap, nor can it be until the stock of gold in the country becomes much larger than it now is. Such cheapness as we have had has been based upon pure credit, upon the results of large collections of such credit through the payment of Transvaal loan instalments and other commitments involving the temporary collection of floating capital in the London market. Sometimes, also, credit called money has been cheap and apparently abundant through more or less extensive creations of it at the Bank of England, and we fear it has also to be added that some of our joint-stock banks have continued to lend the resources placed at their disposal with greater freedom than they should have done due regard had to their safety. However, money has never been excessively dear, though all the year dearer than in Paris and most of the time dearer than in Berlin. Thanks to the fact that our rates have been higher than those ruling in the open markets of France and Germany we have had constant and substantial assistance in the shape of masses of Continental banking credit lent upon our market. How great this assistance has been we are not in a position to measure, and the estimates differ so widely that it is impossible to trust any of them. All we can say is that habitually many millions of Continental banking credit have been employed in our market, either by taking up a considerable proportion of the bills of exchange current upon it or by advances upon public securities, especially American.

Is the new year going to be better than the one now closing? We fear not. The same conditions must prevail during its course that have hampered business in the year now fading into eternity, and some of them are bound to grow worse, for it will take many years before the thrift and hard work of the people saves enough to replace the wealth squandered since the middle of 1899. And the nation gets no help from its responsible leaders. On the contrary, it is fleeced still and deluded both by its politicians in power and by "boodlers" of all ranks and colours.

The Chinese Conspiracy: What It Will Cost.

Now that we have reached the stage of packed public meetings in favour of Chinese labour at the Rand, and the Acting High Commissioner openly deriding the principle of the Referendum, the end cannot be far off. The people who got up the franchise petition to Mr. Kruger at four shillings per dozen signatures—most of them written by the canvassers themselves—have found a new and congenial occupation, conceived in iniquity, carried on by fraud, and controlled by cosmopolitan adventurers, who constitute the power behind the Throne. Undeterred by the fact that the Malays have overspread Cape Colony like a plague of locusts, and that there are already 4,000 Chinese in Johannesburg itself (all settled there since the conclusion of peace), the Rand population appears to be allowing the magnates to bully it into acquiescence in their wishes, and it is not easy to see what can now stop the proposed Yellow Invasion. There are, however, two or three aspects of this Chinese question which have received but scant attention up to the present, and may very well be commended to the notice of the public before it is too late. The first is the heavy pecuniary sacrifice the Government of the Colony, already in a bad way for funds, will be called upon to make by the extinction of the considerable revenue collected under the Pass Law; the second, the potential loss which will be incurred by the abrogation of the registration duty payable under Law No. 3 of 1885, by which the entry of Asiatic coolies into the country is regulated; and the third, the direct destruction of trade that will be sustained by the commercial community in Johannesburg, and along the reef, in consequence of the inauguration of the compound system for the Chinese, and the resulting necessity of special kinds of foods having to be imported—chiefly from China—by the mining companies themselves. Superadded to this inevitable diminution of local trade, there must also occur a very considerable decrease in the average expenditure of the native labourers. The Kaffir may work mainly to earn the price of a wife, or the capital to enable him to keep a harem, but at present he never leaves the Rand until he has spent some portion of his accumulated wages in the purchase of articles which may happen to strike his fancy. It may be old boots, or a decayed top-hat, or a flaming shirt, or a metal watch—whatever it is, it is never sold cheaply to him, and he is seldom allowed to get away until his pockets have been at least partially relieved of their contents. The Chinaman, on the other hand, is not to be permitted—so we are told—to go rambling about on an afternoon's shopping, or otherwise; and even if he were, he has little or no use for European goods (beloved of the Kaffir), and plenty of local Chinese stores exist where he can buy from his own 4,000 compatriots whatever he requires. The loss of his surplus pocket-money must, therefore, be included in the other disadvantages which the Rand will have to bear by reason of the displacement of the native by the Chow.

The one thing the magnates have no intention whatever of doing, is to increase the revenue at present levied from them by the Government. They will be satisfied, therefore, with nothing short of the repeal of the Asiatic poll tax of £3 per head payable upon all coolies who may be imported into the Colony. Why should the Transvaal, however, be obliged to admit the Chinese, and at the same time to forego the revenue that would be raised in respect of them? The Labour Commission puts the shortage of native labour at 249,000 for immediate wants. By inference, this number will have to be brought from outside, and by common report will be sought for in China. That would mean a windfall of nearly £750,000 for the Administration, equivalent to about one-sixth of the estimated annual revenue for the current financial year, and more likely to be equal to about a quarter of the actual receipts for the period. It may, of course, be presumed that in face of the very serious fall in income, and the necessity of balancing the expenditure in some fashion, the Government would not dream of willingly foregoing the amount which would be due to it. The complaisance of Lord Milner, great as it is where the mine owners are concerned, can hardly reach to the point where, with a discredited Budget and an alarming shortfall of income, a deliberate surrender of this very large amount of revenue is possible. Nothing, however, will be received under the Pass Law, in respect to the Chinese, for the system of strict compounding must render that measure practically inoperative. So also the Government railways have to face the prospect of being deprived of the profits earned at present by the monthly return of some 5,000 or 6,000 natives to their homes—less, of course, the fares of the Chinese in making a return journey to Delagoa Bay not oftener than once in three years. Then there is the loss of the many incidental charges levied by the State in regard to natives who take employment with the farmers, or in domestic service, and it may be assumed that once inside the corrugated-iron fence of the compound, the Chinaman will cease to afford any revenue whatever to the colony. The registration duty on entry ought to be a compensation. Nothing is so certain as the unexpected, however, and as it may confidently be relied upon that no pressure will be left untried by the magnates to procure the remission of this tax, so it is within the scope of fair criticism to say that if Lord Milner should insist strictly upon the rights of the public as represented by the Treasury, it will constitute an agreeable surprise. The mines can well afford to pay this £3 per head (which would neutralise the total Government loss), for are they not going to make immense sums by the exploitation of the Pigtail? The depression in the Transvaal is not confined to distressed magnates, nor can it be alleged that the mines have not had a great deal done for them. If, then, the Chinese are imported, the Colony should benefit to the extent of £750,000 additional revenue, unless, of course, the Government wilfully abandons its rights in this respect. But the gain would be more apparent than real, for against it would have to be set off the loss of the other revenue mentioned. It may be argued that, given a full labour supply, the proceeds of the 10 per cent. Profits Tax would be largely augmented. That view, however, is founded upon a misapprehension, for although the actual producing and crushing mines are rather short of their full complements of "boys." the shortage is more felt by the "developing" and "speculative" classes of properties, which are not earning profits. and consequently yield no revenue from this tax. The increase of income from the producing mines could not be very great for some time.

How would the effects of the Invasion extend to the trade of the Transvaal? The Kaffir lives upon mealies (often 22s. per bag at the Rand); the Celestial upon rice and roots. The mealie trade is one of the most important in South Africa, and both producers and merchants will be hard hit if the mines cease to be large buyers, as they certainly must when. and as. the Celestial supplants the native. At present most of the companies order their supplies through the local middlemen or their agents at the coast ports. How large are the amounts spent in this and every other direction connected with the feeding and housing of the natives may be gathered from the fact that about 70,000 "boys" are now at work in the mines. and that at the Henry Nourse mine the expenditure on native food alone has been as much as £8,000 per annum. and at the well known Crown Reef mine the cost for the twelve months is normally upwards of £12,300, or at the rate of over £1,000 per month. Just now, there are only 53 companies washing. but if we take the period antecedent to the War as a basis we may put the number of operating mines at about 80 on the Rand alone and that figure will no doubt be increased in the future. It comes. therefore, to this. that about £80,000 to £100,000 is spent monthly among local merchants in the purchase of native food, or upwards of a million and a quarter sterling per annum. The Chinese, however. do not care for this kind of food. and. as Mr. Skinner informed us in his report, they are rather particular about having their own special varieties, prepared in their own special way. Their food must consequently be brought from China, and as it is common ground among all parties that these Yellow Pests must be segregated, and on no account allowed to mix with either whites or Kaffirs, it follows that the compound system must be introduced, and with it the supply of Chinese special foods will have to be arranged by the companies themselves dealing direct with China, or at least with merchants engaged in the Chinese trade. The loss of this valuable business—equivalent to £1,250,000 per annum, is a big price to pay, or sum to lose, by acquiescence in the proposed Invasion. The Yellow Man is nasty, and he is certainly not cheap.

The Indian Railway Half-Year.

The opening half of the current year proved a somewhat uneventful period for the railways of the Indian Empire, and it becomes quite a pleasure to speak of normal times after so many references to the distressful conditions prevailing only a short while back, and which inevitably made their influence felt on the fortunes of the country's railways. True, the years of famine, now happily at an end, brought an exceptional amount of traffic to certain lines with corresponding increases in dividends, owing to the necessity of carrying food stuffs to the stricken districts, but we imagine there are few Indian railway proprietors who do not joyfully contemplate the disappearance of this unhealthy and impoverishing traffic. Our usual comparative statement shows that a steady growth took place in gross earnings during the six months under review, only three decreases being revealed, the Barsi Light, Indian Midland and the narrow gauge portion of the Nizam's State Railways. Passengers usually gave an increased revenue and a good many lines have again to thank the Delhi Durbar for a substantial contribution to the income under this head. In the last half of 1902 the railways brought the great assemblage to the Durbar, and in the first half of 1903 carried the throng away again. The East Indian Company also reports extra traffic from pilgrim and marriage parties, the Bombay Baroda showed improvement in season tickets, and the directors of the Bengal and North-Western Company speak of general development in the passenger traffic throughout the system. On the Burma lines the advance was exceptionally satisfactory, due in part to increased mileage, but on the other hand we find certain companies suffering from the prevalence of plague. Fortunately the outbreak never assumed alarming dimensions except at Barsi Town on the Barsi Light Railway, and here the disease lasted no less than six months, completely dislocating all business. Latest reports, however, point to a considerable reduction in the number of deaths, and any further derangement of business is not considered likely.

Coming next to the goods traffic, we again find the Barsi Railway a sufferer, in this instance owing to the failure of the cotton crop. We hope the loss will soon be made good. Cereal crops were pretty good on the Bengal Central, but jute traffic gave much less, while wheat did well in the districts served by the Bengal and North-Western. Rice also showed an important gain, largely because in the previous year the crop partially failed. A good deal of variation took place in the goods traffic on the Bengal Nagpur, but the improvements far outweighed the decreases, and the net result was very encouraging. Cotton

and oil seeds did best on the Bombay Baroda, against a heavy decline in food grains other than wheat. Burma Railway goods earnings, taken as a whole, show no advance. Traffic on the new lines opened was small, and on the older portions the principal commodity carried—rice—fell off about 4 lakhs owing to a somewhat capricious rainfall, resulting in the destruction of crops. Export trade, too, was less favourable. The great East Indian system experienced a sharp reduction in its coal traffic, and less important decreases in cotton, provisions, rice, and sugar, and although wheat did very well, the total goods traffic was nearly 6 lakhs less than in the opening half of 1902. On the other hand the Great Indian Peninsula, with which is included the Indian Midland, had increases aggregating Rs.33.96,151, against declines of Rs.15,58,420, the net gain thus being Rs.18,37,731, cotton, wheat, linseed and til seed showing the best results. A heavy decrease occurred in rape and mustard seed, notwithstanding a larger yield, and it appears that owing to a smaller demand from Europe an important falling off took place in the bookings to Bombay. Grain and pulse were down because last year stocks depleted by the famine were replenished, since when the movement in all food grain has fallen to its normal level. It should be noted that the Indian Midland goods traffic dropped severely so that the Great Indian Peninsula brought all the increased revenue.

Everybody cannot be benefited by improved methods, and we note that the introduction of electric power on the Kolar goldfields lead to a decrease in the coal and coke carried by the Madras Railway. Cotton, grain and pulse, however, did well, and the company finished the half-year with a considerable increase. On the broad gauge portion of the Nizam's State Railways the import of food grains, owing to the partial failure of the rice crop, and the export of oil seeds were chiefly responsible for the moderate advance in the goods traffic, which would have been larger except that a serious accident occurred at the Singareni colliery, leading to the closing of some of the mines. The effect of the accident will be still more seriously felt during the current half-year. South Indian shareholders can read in their report the cheerful intelligence that the revenue earned was the best ever obtained, and also that it was well spread over all commodities. Where decreases occurred they were quite trifling and of no consequence. The Southern Mahratta did well in cotton and sugar, but grains other than wheat declined, together with dyes and tans.

* Complete year.

Contrary to recent experience working expenses have shown a tendency to increase in greater proportion than the earnings, and as will be seen no less than eleven companies report a higher ratio of outgo to income, the advance here and there being quite startling. Yet one or two sharp declines took place, and the proportions at which such railways as the Bengal and North-Western, Bengal Dooars, East Indian, and South Indian, are worked are quite remarkable, one might say, suspiciously remarkable. That sooner or later the tendency of expenses would be upward was fully expected, as it was well known that during the times of stress maintenance outlay had been somewhat drastically reduced with certain companies, and we are glad that advantage is being taken of more prosperous times to rectify previous deficiencies. The East Indian, however, is still a prominent exception to those showing increased maintenance charges for the half-year, and the South Indian and Southern Mahratta showed smaller decreases. No replacement of engines took place on the Madras lines, and again the Government Inspector records his opinion that a larger programme of engine renewals is necessary. Permanent way outlay on the East Indian is likely to be increased in future, and also the charges for carriage and wagon repairs, the last-named being much reduced in the period under review by the removal of the shops. It is pleasant to note that the East Indian Company is making an effort to supply part of its serious rolling stock deficiences, but not so pleasant that the cost should come out of capital.

The directors of the Bombay Baroda refer to the costly renewal of the girder bridges throughout their line, and the doubling of the main line between Bombay and Baroda which have now been completed. These improvements, togther with the construction of the Baroda-Godhra line, have been carried out during the last nine years, and have made it practicable to arrange for a faster and more convenient train service between Bombay and Guzerat, with additional trains, which the directors feel sure will be appreciated by the public and result in a satisfactory improvement in the traffic. Some rather important extensions are contemplated by the South Indian and Bengal and North-Western companies and the G. I. P. shareholders must face an estimated outlay of the heavy sum of Rs.67,55,998 for double tracking 111 miles of line. During the busy season certain parts of the single line have been taxed severely, and although intermediate crossing stations have been introduced as far as possible, and further facilities given wherever practicable, it was not possible to get the current year's heavy traffic through within reasonable time. This led to strong protests from Bombay merchants and the Chamber of Commerce in that city and the board came to the conclusion that only by doubling the line could the traffic be satisfactorily handled. The directors hope to receive early orders to begir the work, as there are already indications that next year's business will be quite as heavy and possibly more so. Nothing fresh has transpired concerning the possible purchase by the Secretary of State of the Bombay Baroda and Madras systems in 1907, but the directors again urge proprietors to protect their own interests by refraining from forced sales of their holdings as, should the Government decide to acquire, the period on which the mean market value of the stock has to be calculated will begin to run from April 1 of the coming year.

Local Government Finance.

Lord Welby did well to warn the London County Council against extravagance, but we are doubtful whether this, now general, outcry, would have been heard at the present time if we had not dissipated some hundreds of millions more than we could afford in that South African war, and if the current expenditure of the Imperial Government were not still prodigal and oppressive to an alarming degree. Had our municipal corporations and local authorities of all types been able to continue to raise money at 2½ per cent., or from that to 3 per cent., their extravagance would have continued unnoticed probably for some years to come. Here and there an anxious economist might have raised his voice in protest, but there would have been no general response nor any serious grumbling. It is altogether another affair now when many of our corporations, caught midway in their career of socialistic and other improvements, are driven into the market to raise money at 3½ and even 4 per cent., or sometimes more,

money even then obtained with extreme difficulty, and everybody now begins to talk of the alarming rapidity with which local debts and rates are increasing.

It was quite time attention should be directed to this grave matter, and yet critics and objectors ought not to forget that they themselves have contributed in a signal degree to create that spirit of extravagance against which they now protest. The universal demand has been for improvements of all kinds. Even small towns have not been content to remain in their old undrained and unsavory squalour. Everywhere the spirit of modern civilisation has demanded clean streets, perfect drains, and numerous improvements having for object the amelioration of town life for the masses. People who rarely try to think are to be found grumbling at the outlay of the London County Council upon its tramways, but they do not object to use these important means of intercommunication, and would grumble still more bitterly were they driven to fall back upon the old order of things and to rumble out and in to business by the antiquated omnibus. Let us, therefore, do this justice to local bodies, and recognise that, extravagant though they may often have been, they have but yielded to a concensus of public desires. They might, perhaps, have done less in the way of building handsome or palatial town halls, fewer public libraries and reading rooms, fewer baths and gymnasia. Also more money than was prudent may have been spent upon parks and pleasure grounds, and perhaps upon electrical undertakings. On the whole, however, there is not so much to complain of, and the country could have borne the load it has been asked to assume by these authorities without much irksomeness had we not dissipated our substance abroad in enterprises which bring no profit now, and are not in our time likely to yield any.

When we come to look at the detailed figures of expenditure out of loans by local authorities up to March 31, 1901—the latest date for which we have figures in the report of the Local Government Board for 1902-3, issued in the autumn of the present year—it will be found that the items which might be dubbed extravagant are of small importance compared with those that undoubtedly represent works of public utility and to some extent of profit. Out of the total £317,000,000 which the Report tells us had been borrowed up to the date given, no less than £56,255,000 was devoted to provide waterworks, and £31,306,000 was swallowed up by sewerage works. Another £39,000,000, odd, has gone to provide highways and street improvements, and £37,396,000 represents outlay of borrowed money upon harbours, piers, docks and quays. With the exception of school buildings on which about £32,000,000 has been spent, and gas works, the outlay on which amounted at the same date to about £21,000,000, no other formidable total emerges in the long list. True, electrical undertakings have swallowed up £11,066,000 of borrowed money, but in many instances these yield some profit, and a great many of the other branches of expenditure have been forced upon the communities by the demands of what must be described as the modern spirit of socialism. Thus £1,087,000 has been expended upon libraries, museums and schools of science and art, for all of which an important section of the public has been clamorous. Markets have involved an outlay of quite £7,000,000 of borrowed money and hospitals, asylums, and other expenditure in connection with the administration of the poor law, have licked up about £12,000,000. The only really extravagant looking figure is £6,280,000 laid out upon public buildings and offices, and it is our decided opinion that the cost of these ought never to have been charged against loans. The citizens should have subscribed the money or submitted to a special rate sufficiently high to provide it. Upon municipal tramways the expenditure out of loans was only £8,091,000 at the date given.

It is true all the same that the local debt is mounting fast, and with it the all round cost of local government. We are told by the Local Government Board that the aggregate receipts of the local authorities of England and Wales amounted in 1900-01 to £111,917,000, out of which nearly £30,000,000 came from borrowed money. Expenditure, including £27,948,000 of loan money, reached £110,385,000. Add to this the local expenditure in Scotland and Ireland, and put upon top of all the enormous volume of the imperial budget, and it may be estimated that the entire cost of government, national and local, within the United Kingdom now amounts to something like £260,000,000 per annum. It cannot be much less, and may very well be more. This is a total which can only be maintained year after year by lavish, not to say altogether reckless, dependence upon the help of the usurer.

High, however, though the outlay of local spending bodies is, the amount drawn from rates in England and Wales in the year ended March 31, 1901, was rather below £43,000,000, and it would have been much higher than this but for the fact under one guise or another £12,656,000 was contributed to sustain local extravagance, or as doles to the favoured, out of the resources of the Imperial Treasury. For example, grants under the Agricultural Rates Act of 1896, paid out of the estate duty to landlords, amounted to £1,330,000. Another £7,127,000 was handed over to county and borough councils, police authorities and so on, while £3,885,000 was bestowed upon school boards. It follows that if local authorities had been compelled to provide all this money the rates would have been raised in 1900-1 to nearly £66,000,000. But even this is a long way short of the £112,000,000 in round figures received by these bodies in the twelve months under notice, and it is interesting to see that the revenue from gas works came to nearly £7,000,000, from waterworks to nearly £4,000,000, and from tramway undertakings to nearly £2,000,000, while cemeteries, baths, libraries, harbours, lunatic asylums, and so on provided fully £1401,000. Rents and profits on property, too, gave £2,172,000, and tolls, market rents, etc., provided £3,933,000. Altogether, therefore, local authorities handled nearly £82,000,000 of revenue, of which upwards of 80 per cent. came either from local rates or out of the pocket of the national taxpayer.

Even so rates mount in a quite unpleasantly suggestive fashion. Taking them on the pound valuation in London alone the increase since 1874-5, comparing that year with 1900-01, has been nearly 50 per cent., and for the whole of England and Wales the increase between the same dates has been nearly 52 per cent. On a per head valuation the growth is still more striking, for there we find the increase in London nearly 119 per cent. comparing the last year of the period with the first, and the increase for the whole of England and Wales is nearly 65 per cent. For the whole country outside the metropolis the increase has been about 53½ per cent., and that the expansion per head should be so much more striking, especially in London, than that of the per pound valuation points to an effort on the part of the authorities to disguise the ravages of the rate levier by enhanced property valuations. These are often arbitrarily made and unquestionably in many instances too high. In their report the Local Government Board Commissioners state that between 1874-5 and 1900-01 the actual amount of public rates levied in the metropolis has increased by £7,465,672 or 174.8 per cent. In the same period the rates levied exclusively in urban districts outside the metropolis have risen by upwards of £12,479,677 or 258.8 per cent., while those levied exclusively in rural districts have risen by only £719,796 or 41.5 per cent. The rates levied in districts partly urban, partly rural, have also increased, but only by £3,129,944 or 37.4 per cent. This shows that the money extracted from the people by local bodies is now altogether nearly £24,000,000 larger than it was a quarter of a century ago.

And the debt of these bodies has also grown until the amount of outstanding loans per pound of rateable value became in 1900-01 £1 15s. 1d., against about 16s. in 1874-5. What the aggregate debt of local authorities may be at the present moment we cannot say, and must again complain that the Local Government Board should be so dilatory with its statistics. It might have brought the mere debt figures down to March 31 last instead of being two years behindhand. Even on its own showing, however, the increase between the dates given has been £223,884,000, or upwards of 240 per cent., and if we add

in the local debts of Scotland and Ireland and allow also for the further additions to these debts during the past two years, we shall be within the mark in putting the entire present local indebtedness of the United Kingdom at between £400 and £420 millions. As the National Debt is now something more than £800 millions it follows that the public burdens of the United Kingdom, imperial and local, at the present moment exceed £1,200,000,000. The mass is a formidable one and dangerous, but there is no prospect of any reduction of it worth speaking about for many a day to come. On the contrary, local authorities and imperial unite in demanding more and more money from the usurer until it is becoming a question how long the country can stand the strain.

Economic and Financial Notes and Correspondence.

Sir Henry Cotton on the Tibetan Expedition.

A remarkable article is that written by this eminent Indian Civil servant, and published in Monday's *Daily News*, and as valuable as remarkable. For the first time the British public are given the means of understanding the true relations between India and Tibet. Sir Henry recalls to mind the fact that in 1890 a trade convention was entered into between China and the Vice-Regal Government, China being the suzerain of Tibet. Under this convention the boundary between Tibet and Sikkim was defined, and the British Protectorate over Sikkim recognised. It also engaged the two contracting governments to respect the boundary and prevent acts of aggression from their respective sides of the frontier. Increased facilities for trade were reserved for discussion, and arrangement, as well as the methods of communicating between the Indian Government and the Chinese authorities in Tibet. In 1893 a conference was held at Darjeeling, in virtue of the 7th Article of the Convention of 1890. It was attended by a member of the Indian Civil Service, and by Mr. James H. Hart, with a Chinese colleague, as representing China, and the end of the discussion was the signing of nine regulations and three general articles designed to put all things in order. A trade mart was established at Yatung, on the Tibetan frontier, and declared open to all British subjects. Trade in arms and ammunition, military stores, salt, liquors, and intoxicating or narcotic drugs were at the option of either Government to be entirely prohibited, or permitted on such conditions as either Government, on their own side, might think fit to impose. No duty was to be levied on other goods for a period of five years, but after that a tariff, if found desirable, might be mutually agreed upon and enforced. The export of Indian tea was prohibited for five years, but after that it was to be liable to a rate of duty not exceeding that at which Chinese tea is imported into England. Provision was also made for the settlement of trade disputes arising between the countries, and for the transmission of correspondence between the Government of India and the Chinese Imperial resident in Tibet. Tibetans were to continue to graze their cattle in Sikkim, subject to such regulations as the British Government of India might impose, and finally it was agreed that after the five years had elapsed, on six months' notice given by either party, the regulations might be subject to revision by Commissioners specially appointed. What Sir Henry Cotton wants to know is when and how this agreement was broken by the Tibetans. No information whatever of any breach, least of all of any breach serious enough to involve the sudden despatch of a fighting force in the dead of winter, has ever been reported, and that none can really have occurred seems to be proved by the language now used. It is the Tibetans who are said to be at fault, not the Chinese, and yet the Tibetans have never had anything whatever to do with these compacts. They have been made with the overlord of Tibet, the Chinese Government. It was a diplomatic blunder, therefore, Sir Henry maintains, to send Colonel Younghusband with an armed mission into Tibetan territory, and it seems a still greater blunder — probably, however a deliberate blunder — to endeavour to thrust aside the Chinese representative and deal direct with the Lamas. The whole surrounding circumstances, indeed, point to a deliberate intention on the part of the military in India to find a new battle ground, in order to win rewards and titles. That seems to be at the bottom of the thing. Tibet is of no use to us, of no value either to Russia, for, as Sir Henry points out, India has never in the whole course of her history been invaded from that side. It is simply a piece of wanton aggression, nothing more, nothing less, and if we had a moderately strong Government at home the expedition would never have been undertaken. That it should be so now is, moreover, a defiance of the rights of Parliament and the British overlordship of India. Simla has taken the thing in its own hands, treating our Cecil sublimities, and the nation itself, with contempt.

Mr. Volkhovsky on Internal Russia.

A remarkable interview with Mr. F. Volkhovsky, the eminent expatriated Russian, now in this country, was published by the *Manchester Guardian* on Tuesday. Mr. Volkhovsky has suffered much at the hands of the bureaucrats who oppress his countrymen, and was finally sent to Siberia for life. Escaping after eleven years he has since worked in England to liberate his fellow citizens, sacrificing all for their sakes. Possessing exceptional means of information about what passes in Russia, a conversation with him at the present moment is of great interest, and not without comfort to those who cling to the hope that peace may yet be maintained in the Far East. Discontent, he declared, is rife in all parts of the empire, even the peasants being now eager listeners to whoever speaks to them of liberty, peasants that but fifteen years ago were ready to hand such over to the authorities. The Armenians, formerly so loyal, now require armies to hold them down. "Russia has been extremely short-sighted in trampling on the national feeling of all these peoples," Armenians, Georgians, Fins, Poles, the "some eighty" nationalities embraced within the empire. Everything thus points to paralysis within, paralysis, and perhaps, as the *Guardian* itself adds, bankruptcy.

Asked if he thought a war with Japan probable, Mr. Volkhovsky made the following reply:—"The present winter will be so full of trouble to the Government that I think it very unlikely she will venture to declare war on Japan. But I will not hazard a definite prophecy, because the Russian Government is not homogeneous. It consists of rivals who depend not on public opinion, but on the favour of the Tsar, and still more on the favour of his favourites." And he went on to say that he had a poor opinion of the Tsar, as a man of weak will and little intellect, whose opinions are those of the councillor who last had his ear. Perhaps for this very reason the empire may stumble into war without meaning it, and the only real comfort to be extracted from his opinion upon the critical question of the hour lies in his assertion that, while there is no settled policy at the court, "Russia is quite unprepared for war." "When Japan," he added, "first showed her teeth official quarters displayed great alarm, and troops were sent off in such a hurry that the Minister of War forgot—as Ministers of War will forget—to despatch any artillery. I believe it is now on the way," observed Mr. Volkhovsky, "but this omission accounts for the delay in the negotiations."

Cleon the Tanner and some other Demagogues in "C."

Has it ever struck observers of current events how amusingly singular is the fact that three of the most notorious demagogues known to history have had names beginning with "C"? There was Cleon the tanner in Athens, and Clodius, Julius Cæsar's deputy as mob manager in Rome, and now we have Chamberlain the screw maker of Birmingham, political manager for De Beers. We might indeed say that four demagogues have had names, the initial letter of which was "C," for Julius Cæsar himself, until he went to Gaul with a five years' tenure of despotic power to conquer and annex in Western Europe, was the greatest mob swayer the world had ever seen, and in that capacity ranks amongst the basest of mankind. But Clodius perhaps comes nearer to our Birmingham ideal than his master, and his handling of opponents

in the imperial city might be held to have set the example which Mr. Chamberlain followed in the Aston riots of notorious memory, and which his mob attempted to imitate when they recently sought to stir up violent opposition to Lord Hugh Cecil and Mr. Winston Churchill—"shall they be allowed to insult our Joe"—Cleon, the tanner, too, was in many respects a remarkable prototype of this same "Joe." He was what would be called in the United States a "brainy" man, far more so than Clodius, more so, we even venture to hint, than Mr. Joseph Chamberlain, but when he was hard put to it in order to raise the money necessary for the prosecution of the Peloponnesian war, one of the expedients resorted to by him was a doubling of the tribute to be paid by the states subject to the Athenian Republic. Our Joseph, we believe, wants to do something of this kind with the colonies. Behind his clamour for our "protection"—poor naked wretches that we are—there is obviously a design to draw the self-governing British colonies into the vortex of our imperial politics and compel them directly or indirectly to bear part of the monstrous burdens imperialism—or "Cæsarism" it might perhaps more appositely be called—has thrown upon us. This is just like Cleon, though our "C" may never have heard of that famous man. But he beats Cleon in being his own Demosthenes, and in another respect the parallel is not yet complete between the tanner and the ex-screw-maker, for our "C" has not yet "borrowed the treasures of the temples at a nominal rate of interest." Confiscation of church property though is by no means an expedient to be ruled out when our eminent Unitarian is driven into a corner, and that would be rather a striking example of what might be called poetic justice, in view of the eagerness invariably displayed by the bulk of those who enjoy the use of this property to hound the nation into evil courses, to play down to the mob, and to cast a glamour of sanctimoniousness over the worst crimes that mob may perpetrate. Altogether, therefore, the parallels and contrasts here suggested are worth meditating upon. In one respect only does our premier demagogue fall far short of Clodius, since that gentleman did not scruple to murder his enemies in Rome whenever it seemed to him or his master advisable to put them out of the way. Our great demagogue, however, has not been so very far behind, only that he has hitherto confined his murdering to South Africa, and wreaked vengeance upon women and children there because their husbands and fathers and brothers withstood his nefarious designs. And he may be even with Clodius yet before all is over, for the excessive load of taxation involved in a protectionist policy is certain as anything human can be to lead to riots and bloodshed in the towns of this country once the pinch of it has made the working population therein, divorced from the soil and from all resources outside the daily wage, familiar with hunger. Then we shall see strange things and the methods of the Aston rioting much improved upon.

J. R. Roberts' Stores.

A really scandalous condition of affairs is brought to light by the committee lately appointed to investigate the causes leading to the collapse of the Andre-Mendel promoted business of J. R. Roberts. Said committee was the outcome of a conference held in November, when apparently the position had become desperate, and the result of its inquiry was put before the shareholders on Friday last. It would be mincing matters not to at once say that the story unfolded is very discreditable to all those in any way connected with the company's flotation, and clearly the only honest way to meet the case is by the return of money taken for a business which, when sold, was rapidly approaching its last gasp. We should like to print the committee's report in full did space permit, but a few extracts will be quite sufficient to reveal the deplorable state into which the business has been allowed to drift. Messrs. Higgins, Holden, and Gilchrist were the gentlemen who conducted the investigation, and their fearless report commences with the characteristic statement that unless radical changes are at once made in the conduct of affairs the company could not do otherwise than drift into a state of hopeless insolvency. Trade expenses had been constantly increasing in face of a great shrinkage in sales, and it is recommended that a most searching inquiry should be made into the details of this outgo. Stock was valued on such a basis that it became inflated to the amount of several thousand pounds, and on what seems to us a generous valuation it appears that the properties, apart from the floating assets, are insufficient to fully secure the £100,000 debenture stock. This means that goodwill figures in the balance-sheet to the tune of £140,000, and, considering the latest performances of the company, we think the committee are much too modest in saying that £100,000 of that should go. Naturally more money must be provided if the concern is to be saved, and as a preliminary to providing same a reconstruction scheme is recommended. Then the board should be strengthened by the introduction of two business men thoroughly conversant with the dry goods trade, and a good deal of outlay undertaken in putting the shops into a decent state of repair. Sir A. J. Newton presided over the gathering, and his reply to this serious indictment was feeble in the extreme. In fact he could do little else than accept the committee's statement, although desirous of valuing the properties a good deal higher, and he indulged in a whine that one of the causes of the disaster was the fact that the concern had been attacked. But the estimable knight—or is he a baronet?—should understand by now that dishonestly conceived companies and those connected with them invite adverse criticism. As to the goodwill, the chairman said they must take it as it stands, and considered no good could come of reconstruction. He asked shareholders to forget all about the past, and made the convenient observation that a mere recapitulation of past faults and bewailing that the business had got into a parlous condition would not help them in the slightest. Of course there was no mention of the return of promoters' booty, and not a single shareholder had the courage to tell the chairman that his duty to the shareholders was to endeavour to obtain restitution from the vendors. In fact, beyond a little jangling amongst themselves and some rubbish about retaining the chairman because of the danger of swapping horses when crossing a stream, proprietors had nothing to say at all, and the meeting dispersed after thanking the investigation committee for its labours. It is apathy and supineness like this that encourage the unscrupulous to fresh efforts.

Cotton.

During the past twelve months the cotton markets of the world have resembled a bull-ring with the bulls in possession. Excitement has reigned supreme, and fortunes have been lost and won in a single session, so rapid have been the changes and variations of prices, while spinners and weavers are face to face with the hardest time they have seen since the days of the American Civil War. For to find a parallel to the year now closing it is necessary to go back to the great fight between the North and the South, and the cotton famine it produced. Again war is the cause of the high prices, only this time it is not between armies of soldiers, but between market manipulators, assisted by nature and man's heedlessness. The game began months ago, when certain operators on the New York market came to the conclusion that the 1903 crop would show a decided shortage. For a time this clique ruled supreme, and when it grew weary of making money, another band was formed in New Orleans which took up the running, and made it faster and more furious than ever. Later the two joined forces, and then the plight of the consumer and the bear went from bad to worse.

Though much of the misery and distress, which these abnormal prices cause, must be laid to the charge of the gamblers who have forced quotations up to satisfy their lust for wealth, it must be remembered that had it not been for nature and man's negligence the market tactics of the "bulls" would have been impossible. Early droughts, late frosts, untimely rains, and the boll weevil have been nature's share, while the planters have assisted by their past anxiety to squeeze the last ounce of cotton from their fields, and their neglect of proper cultivation. From the first has resulted damage to the actual crop for the year, but the slovenly tillage has weakened the reproductive powers of the soil. Thus, the farmer is to blame more than nature for preparing the way for a corner in the

market. Months ago one of the leaders of the New York bulls saw that the negligent way the planters in the South treated their cotton fields was bound to result in a shortage in the immediate future. Therefore, wise in his generation, he steadily worked for a rise, which came partly as the result of his manipulations and partly because of nature's unexpected assistance. By the time he had cleared his profits the position had developed considerably, and a rough estimate of the coming crop was possible, which induced others to carry on the gamble. At first the crop was reckoned about equal to that of 1902, but as the weeks slipped by the estimates grew less and less. The final stroke was given by the State Bureau, which returned the crop at 9,962,029 bales, or two million bales less than the previous year, or about a million below the lowest former estimate. Prices went up with a jump, and ever since have displayed a displeasing tendency to mount higher rather than come down.

To show what this means to the spinners and weavers, it is only necessary to compare the quotations of middling in January last with those of a week ago. In the beginning of the year spot middling was between 4d. and 5d., though it soon went over 5d., and for the greater part of the year has been between 6d. and 7d. The latest scare sent it up quite to 7d., and before the New Year is many weeks old it will probably be close on 8d. With stocks low and orders unfulfilled, such a rise in price means to spinners and weavers heavy loss, if not ruin, and it it their shoulders that bear the burden of the gamble, not those of the men who buy and sell what they don't want, or what they have not got. Were they the only gainers or losers, the world could afford to watch their mad scramble for wealth with contemptuous indifference. But, unfortunately, when the manufacturer finds it unprofitable to run his mills he must either close down or work short time, and this in its turn spreads misery and want among the unfortunate hands he employs. The distress in Lancashire is at the present moment becoming acute, for since August last, with but brief intervals, the majority of the mills have had to shorten their hours. In their despair, the British Master Spinners' Association have suggested to the kindred associations on the Continent and in the States that universal short time shall be adopted, with a view to restrict the world's output of cotton goods. This would at once reduce the demand for raw material, and so leave the market gambler saddled with unprofitable bargains. It is a drastic scheme, yet something of the kind must undoubtedly be tried if the corner is to be broken. But the innocent will suffer, and suffer cruelly, while the mills are idle.

Company Bankruptcies.

We always read with great interest the report of Mr. John Smith, Inspector-General in Bankruptcy, on this subject. He has, as usual, some pertinent observations to offer in his report for the year 1902, only just issued. Perhaps the most striking amongst his observations relates to one singular effect of the Bankruptcy Law Amendment Act of 1900. That Act did good in a number of ways, but, as too often happens, left a loop-hole through which its provisions in regard to the amount of capital subscribed before authorisation to trade could be given, and other useful reforms could be evaded. The consequence has been that in order to escape the necessity of disclosing facts a great proportion of the new companies now registered issue no prospectus. Their promoters are thus free to do as they like, and to defraud whomsoever they please. In the past year, Mr. Smith tells us, there were 3,596 new companies registered in England and Wales alone, with a total nominal capital of £147,563,148, and of these only 449 issued prospectuses. The total capital involved in these 449 companies was £29,280,619, but 91 of them, with a capital of £2,527,000, failed to get a certificate authorising them to begin business. The other 3,147 companies, whose nominal capital was £118,282,592, filed no prospectus, and by omitting to do that were free to go to allotment on a £10 subscription—to do anything they pleased. This ought to be remedied, because such liberty makes the most useful provisions embodied in the Act of 1900 a mockery; but that is just the way Parliament habitually treats the unfortunate multitude of citizens that still faithfully regard it as the representative of their interests, the safeguard of their liberties and property.

Interesting, also, is Mr. Smith's analysis of the losses caused to the public through the failure of joint-stock companies. Necessarily his figures are imperfect, because through another defect in the law so many of the rotten companies disappear by a process of what is called "voluntary" liquidation, which withdraws them from all further official notice, and enables them to cheat their shareholders and creditors with almost complete impunity. Here again is a grave defect, which ought to be easily remedied by, as Mr. Smith suggests, the enactment of a clause obliging the liquidators of "voluntarily" wound up companies to make periodical returns to the Board of Trade. During the past ten years, Mr. Smith says, 38,928 companies were registered, and 14,538 companies went into liquidation, nearly all of them by the "voluntary" channel. The total capital involved was £560,651,863, but of this £289,877,109 represented the vendors' interest, in other words, was probably nearly all water. This is the main element in the composition of capital, preventing even an approximate estimate of the actual losses sustained by the public, but an analysis of the figures relating to 13,517 companies that have gone into liquidation shows that they involved a loss of £163,434,137 to subscribers of shares other than vendors, and that the creditors of such insolvent companies suffered to the extent of about £39,500,000. This estimate, the Inspector-General says, is a conservative one, but even so it shows a total loss during the ten years to the public of £203,000,000. This is exclusive of nearly £180,000,000 represented by vendors' shares, some considerable portion of which may have been sold to the public, increasing their loss, and the figures do not take into account the 11,000 companies which were struck off the register for various reasons without going into actual liquidation.

In most, if not all of these, additional sums must have been sacrificed, and one wonders how the nation tamely submits to this form of robbery. If it would only make up its mind, and tell the legislature that it must be protected by full publicity at every point, a remedy would not be difficult to find. Publicity, in short, is the only means by which the investing and thrifty can be in any effectual way protected. The law ought to insist upon full information relating to the properties or businesses offered to the public by way of a joint-stock company, and to compel the managers, directors, and others of such companies, when organised and in operation, to issue periodical balance-sheets of a full and explicit description. Thus alone can the means be put into every man's hands to enable him to judge whether the investment offered to him is worthy of confidence or not. It may be too much to expect a sweeping reform of this kind in the present debased state of public morals, but at the very least the issue of companies without detailed prospectuses ought to be stopped, for, as Mr. Smith also reminds us, the committee of the Stock Exchange, in pressing this matter before the Board of Trade, furnished figures showing that during the last six months of 1900 the proportion of companies coming before it without a prospectus was only 31 per cent. of the total, the other 69 per cent. being prospectus companies, whereas in the first six months of the present year the position has been almost exactly reversed. Companies with prospectuses in this later period number only 39 per cent. of the total, and those without prospectuses amount to 61 per cent. That ought to be stopped, whatever other infamy is allowed to continue alive

Mr. Creswell and Chinese Labour: Important Correspondence.

Readers of this Review are well acquainted with the nature of the evidence given by Mr. F. H. P. Creswell before the recent Labour Commission, and know how his honesty has been resented by the mine bosses and other enemies of those unfortunate individuals in whose veins flows Anglo-Saxon blood. We gave that evidence in full weeks ago, showing how Mr. Creswell, when manager of the Village Main Reef, experimented successfully with white labour, and, together with Mr. Percy Tarbutt's letter, revealed the true mind of the boss—fear of the political power of white men. An interesting sequel is furnished by the correspondence that has since passed between Mr. Creswell and his employers, and now to hand in the South African newspapers. Its importance is so great, throwing,

as it does, so searching a light upon the intentions and motives of the mine potentates, likewise upon their dishonesty and unscrupulousness, that we reproduce the greater portion of it for the instruction of readers:—

On September 30, the secretary of the Village Main Reef Company wrote to Mr. Creswell saying the directors considered that "the publication of Mr. Tarbutt's private letter of July 23, 1902, was inexcusable, because, as you must have foreseen, a false impression has thereby been caused as to the attitude held by themselves, as well as by the firms which some of them represent, towards the experiment with white unskilled labour that was, and is, being made on these fields. You must be perfectly aware that, had you not received support from the financial houses mentioned in Mr. Tarbutt's letter, as well as all others that are represented on your board, your experiment must have been closed in its initial stage, owing to the severe losses that were being incurred at the mine under your regime. . . I have still to inform you that the consulting engineer, Mr. Robeson, has been instructed to report fully to the board on the technical portion of your evidence, as well as on the working of your mine, and to request you to afford him every facility."

In reply to the above, Mr. Creswell, on October 6, wrote a lengthy account of his endeavours to extend the use of white labour on his mine, and in reference to the employment of disbanded irregulars said:—"Instead, therefore, of our being, as I had originally intended, a single mine using white men as an attempt at a solution of our labour difficulties on purely economic grounds, this mine became one of many, in which the reason of the employment of whites was largely a patriotic endeavour to find employment for the large number of irregulars dumped down, so to speak, on these fields. . . Up to the latter end of August, 1902, although I can remember receiving no active assistance from your late consulting engineer, his attitude was sympathetic, and in conversation with me he agreed that it was bad luck that, owing to the disorganisation of my work by the loss of 40 per cent. of my Kaffirs at the end of July and the beginning of August, and their replacement by raw boys who had to be shown the work, I could not show as good results from the increased use of white labour as I should have been able to do. In reply to my inquiry then as to how white labour was doing on other mines, he said it was too early yet to judge definitely, that you could only judge by tendencies, and that tendencies were distinctly encouraging. About the end of August Mr. Hennen Jennings, Mr. Beit and other gentlemen of high financial standing arrived in South Africa, and within a very short period the sympathetic attitude with regard to extending the use of white labour was changed to one of opposition. Late in September, or early in October, 1902, the committee of three mine managers, as to the appointment of which I have given evidence, was appointed; and instead of my being given facilities for placing evidence from other mines, favourable to my convictions on the whole matter, before them, I was made to confine myself to my own mine, and that committee were asked by your consulting engineer to judge of an intricate and far-reaching problem, by the results obtained at the very commencement, and under conditions rendering a judgment from results on this mine almost impossible." Although this Commission reported unfavourably, Mr. Creswell alleges that the Chairman found that the antagonistic statements which had been set before them were not quite reliable, and he was allowed to continue his experiment. Continuing, Mr. Creswell says:—"On January 19, 1003, a deputation waited on Mr. Chamberlain, which I was asked, an hour or two before, by telephone, to attend. At this deputation it was urged on Mr. Chamberlain that the employment of white labour was economically impossible, and I expressed my own opinion to the contrary. Both Mr. Hennen Jennings and I subsequently wrote to him to supplement our remarks at the time, and Mr. H. Jennings, while enclosing a copy of Mr. S. Jenning's letter to you of November 14, 1902, in support of his views, did not attach also a copy of my letter of December 9, 1902, to you, a fact to which I called your late Chairman's attention at the time." Following on this, Mr. Creswell was promised another mine if he would resign; but he refused to assent, and accordingly the consulting engineer threw up his post. The London board accepted the latter's resignation; but ordered a reduction of white labour, after which the controversy dropped until the date of the correspondence. Mr. Creswell proceeds:—"Since April last my output of ore has increased by several thousand tons, and my costs have decreased by over 3s. per ton, enabling me to maintain my profits out of poorer rock. During these months I have never received one word expressing any gratification at the improvement taking place, nor any comment whatever, until some three weeks ago, the London board demanded an explanation of the fact that the ratio of white men to natives was higher than the average on other mines. I was desirous of not giving evidence before the Labour Commission, as I was satisfied that the best work I could do was to go on practically demonstrating the truth of my views, and that the practical evidence afforded by such work would be of great value when it was found that the importation of Chinese was either not possible or found to be no solution at all of the problem." Being invited, however, Mr. Creswell did not feel justified in refusing to appear before the Commission, and contends that in the circumstances of his examination suppression of Mr. Tarbutt's letter "would have been, in my opinion, inexcusable." Concluding, Mr. Creswell says:—"I have been engaged on a very difficult piece of work, and, while I would like to place on record the unfailing support accorded to me by your late Chairman, Mr. B. Kitzinger, until his departure to Europe, and by Mr. Schumacher and Sir Percy Fitzpatrick during the earlier stages of the controversy, this support did not avail to the extent of your insisting that I should not be continually diverted from my work by the necessity of replying to attacks by your late consulting engineer, far less to insisting on my having every assistance from him and his staff; and it entirely failed to prevent pressure being brought upon me to resign, when it became a question between my dismissal and his resignation; although, by your not acting on his advice, you have clearly decided that, in your opinion, he has not made good his contentions. It has always appeared to me, and still does, that in the difficulties we are in as to labour, an experiment such as I was engaged on, if tried at all, demanded that the man who was carrying it out with full conviction as to its ultimate success should have received not only the tacit assent of his board, but also the expressly ordered assistance of all parties connected with the company. . . I can only conclude from the tone of your letter of the 30th ult., and from a review of all past circumstances, that you would prefer to terminate my agreement, but hesitate to do so at the present time. I can accept no censure from any board of directors for evidence given by me on oath before a Commission appointed by the Government of the colony to get at facts, nor do I hold myself responsible to you for any other thing than the proper management of your mine, and I beg to give you notice, in terms of the agreement between us, that on this day three months I shall vacate the position I now hold as your general manager."

On October 15 the secretary of the company wrote accepting Mr. Cresswell's resignation. But the truth has been spoken, and it cannot now be hushed. The mine bosses have condemned themselves out of their own mouths. Englishmen know them now as they never knew them before, and this knowledge is something gained, even if it be at the expense of Chinese labour. The boss motto is "starve out the whites."

Showell's Brewery Company.

There can no longer be doubt that something is seriously amiss with this company's business, and the sooner the fullest light is thrown upon it the better. When in 1901 the first symptoms of declining prosperity became apparent, the directors vouchsafed the opinion that the causes of the dip in profits were of a temporary character, but, instead of recovering, revenue has continued to go downhill in a most alarming fashion, and for the twelve months to October 3 last the decline, compared with only three years ago, is very nearly 50 per cent. In 1900 the trading revenue of the company was £122,187, but for the succeeding year it had fallen to £100,006, followed by a drop to £94,061, while in the period under review it came to no more than £64,860. That is to say, the shrinkage since 1900 has reached the enormous sum of £57,327, and any further retrogression will seriously imperil the safety of the preference shareholders. Although the dividend on the ordinary shares for 1903 was a mere 2½ per cent., compared with 8, 10, and 15 per cent. in the three preceding years, even that small amount was not earned, and could only be provided by drawing on the balance brought forward, and from the fact that it was distributed in the form of an interim payment, we should judge the second half-year's trading to have been much less satisfactory than the first. This opens up a very serious position, and the directors are failing in their duty to the shareholders in withholding all reference to the causes of the collapse from the annual report. Not a word of explanation is forthcoming, and proprietors must remain in a state of suspense until the annual meeting on Tuesday next.

† After allowing for £1,000 voted to Birmingham University Fund.

It has been known for a long time past that the business was in a bad way, and the knowledge has naturally been

reflected in the market value of the company's securities. Few probably realise the serious character of the fall during recent years, and we have compiled the following statement to illustrate the immense losses which some unfortunate individuals have suffered. That the shares should never have gone near £40 apiece need hardly be said, but that is poor consolation to those drawn in at such montrous prices, and the disastrous slump is highly suggestive of the dangerous character of brewery securities of all kinds.

	1899.	1900.	1901.	1902.	1903.
Highest	39	30	23	17	12
Lowest	30½	21½	16	12	6

Little of a useful character can be gleaned from the balance-sheet, but it is instructive to observe that the properties have steadily increased the while revenue fell away. In 1899 the value set upon properties was £943,854, and in the balance-sheet just issued the figure is more than £100,000 higher, at £1,047,114. The item includes freehold, copyhold, and leasehold premises, brewery, maltings, and fixed plant, rolling stock, loose plant, etc., and we shall be interested to learn in which direction the serious losses have occurred. With these in mind, it is scarcely worth referring to the depreciation allowed by the directors, as this is merely leasehold redemption and natural deterioration of plant, etc. What shareholders will want to know is the present day value of these assets, taken into the latest balance-sheet at a lot over £1,000,000. Oh! but there is a reserve fund of £113,000. Yes, but if it had to be used in making good losses, that would be merely piling up the agony, as the money came from profits on issue of debentures and new ordinary shares, and on the sale of the London business. So it is really capital. In other directions the financial position grows steadily worse, and the concern is credit bolstered to a degree that bodes no good. Including £40,252 due to bankers, of which £15,000 has been since repaid, the company's floating debts at the date of the balance-sheet were £113,252, apart from more than £14,000 payable for interest and dividends, against which debtors were only £63,755, and cash £10,816, and £4,294 was in the hands of Lloyds Bank against outstanding interest warrants. Loans, mortgages, and investments there are to the amount of £52,985, but we know from experience that these can never be considered really liquid assets, any more than stock, which with this company stands at the great figure of £110,152. It is a great misfortune for shareholders to receive a balance sheet like this just at the time when they want comfort, and they will do well to insist upon the fullest disclosures when meeting the directors after the Christmas holidays.

Turkey's Reformed Finance.

Mr. Adam Block, the new British representative on the Council of Administration of the Ottoman Public Debt may find it a little difficult to follow in the footsteps of his brilliant predecessor, Mr. H. Babington Smith, but he acquits himself well in submitting the Council's report for the year 1902-3, and no doubt British interests are still in safe hands. Thanks to the unification, at last consummated, the current year marks the commencement of a new basis of relationship between the Turkish Government and its foreign creditors, as the palace has now an interest in the revenues administered by the debt, profiting to the extent of 75 per cent. in any sum over and above that required for the interest and sinking fund of the new unified converted debt. But the Council will none the less have to keep its weather eye open. Government co-operation may mean several things in Turkey, a "conveyance" of revenue for one. We need not go over the unification plan again, but it is good on Mr. Block's part to cite the issue of Abdul Hamid's decree to the Powers as a proof that Turkey intends to stand by her engagements in the future. He will have to read a little history. Financial results in the past year were better than in any of the last twenty-one, but the prosperity came in great part from the exceptional payment of arrears of the Eastern Roumelian Tribute, always a very uncertain source of income. Nevertheless the revenue directly administered by the Council, with the exception of spirits and stamps, show a slight improvement on the preceding year. Revenue from all sources was £T2,608,549, of which £T2,459,438 was applicable to the service of the debt, and after making the usual deductions the sum available was £T1,869,438. Four-fifths, or £T1,495,551, is available for interest, and would have provided a payment of 1¼ per cent. on the four series of bonds, against the usual 1 per cent., but a difference of opinion arose between the Government and the Council in connection with the proposed increase, and the question was submitted to arbitration. Pending the consideration of the matter, the regular 1 per cent. was paid, and sufficient to provide the extra ¼ per cent. was placed to a suspense account, leaving £T178,390 to be carried to the reserve. The Lord Chief Justice of England, chosen to arbitrate on the point, decided that from September 1 to 14, 1903, and as long as the funds at their disposal for the payment, whether arising from the annual sums actually received or from the existing or future reserve of accumulated fractions, permit, the Council ought to distribute interest at the rate of 1¼ per cent. In accordance with that award the half-yearly coupon No. 40, payable last September, received interest of ⅝ per cent., and a corresponding advantage was granted to the holders of the "Lots Turcs." There the matter rests, since in virtue of the unification no further coupons will be paid under the old system. The provisional scrip for the new 4 per cent. stock is already being issued, and the definitive bonds in all probability will be issued in March next. When certain payments have been made to the reserve fund, in connection with the unification, it will amount to £T1,428,865, and must henceforth meet any deficit in the annual receipts under £T2,157,375 required for interest and amortisation of the new Converted Debt. If the interest of the reserve is not sufficient the deficit will be taken from the capital, but any sums withdrawn must be repaid in succeeding years from the 25 per cent. of any excess revenues over and above the mentioned amount. Otherwise the 25 per cent. is destined for the extraordinary sinking fund of the debt.

Assam Tea.

The preliminary details of the results of trading to date issued by four of the Assam Tea Companies would appear to indicate that the year is not going to prove so profitable to the industry as had at one time been hoped. In the case of three out of the four the crops have been above the estimates, while in the other, although it was below the estimate, the outturn was larger than that of the previous year, and, thanks to this, the cost of production has been substantially reduced. Unfortunately, however, the average price realised on sales to date is also considerably smaller, and as during the past few weeks there has been a further heavy decline in values of Medium Assam Teas, amounting to nearly another ¾d. per lb., the outlook is by no means promising. The Majuli Company expects an output of 1,390,000 lb., or 234,000 lb. more than in 1902, and 150,000 lb. above the estimate, and so far has sold 709,103 lb., at an average of 8.24d. per lb., against 537,450 lb. at 8.41d. in the corresponding period of last year. A similar story is told by the Attaree Khat Company, which has a crop of 1,120,000 lb., compared with an estimate of 996,000 lb., and an actual crop in 1902 of 845,000 lb., and has sold to date 491,985 lb., at 8.15d., against 321,009 lb., at 9.44d. The Moabund has been a little more fortunate, with increases of 88000 lb. over the estimate and 290,000 over the outturn of a year ago, at 1,608,000 lb., and sales amounting to 755,700 lb., against 629,330 lb., the average in both cases having been 8.26d. But it also has suffered since the end of October by the fall in values, and recent invoices have realised about ½d. less. The Borelli Company is the only one which found the weather unfavourable, but its crop of 664,000 lb., although 56,000 lb. below the estimated quantity, is 38,000 lb. above that of the previous season, and so far the sales have reached a total of 361,671 lb., at 7.92d., against 307,748 lb., at 8.02d. Both the Majuli and Moabund Companies have managed to meet their interim dividend on the preference shares, but the Attaree Khat makes no mention of any such payment, and the Borelli directors regret that they are not in a position to make any distribution at present.

Passing Events.

We hear in various quarters that our wonderful Government is getting into a funk about the state of the Exchequer, and the approaching Budget. So gloomy is the prospect, what with Chilian warships to pay for, a Somali war to finance, West and East African supplementary estimates, the loss of the Transvaal's pledged £30,000,000, part of the £100,000,000 Mr. Chamberlain went off in a cruiser to collect, the insatiable rapacity of the Admiralty and naval works department, pulls upon the Treasury of every description, that instead of reducing taxes, fresh sources of revenue will have to be obtained in order to balance next year's Budget. Certainly the figures coming in to the Exchequer week by week are not particularly encouraging. The total for the week ended Saturday last from all sources, including £300,000 from the Post Office, was only £2,450,000, of which Excise gave £943,000, and Customs £764,000, and receipts for the whole year up to that date amount to only £87,126,000, against £91,077,000 in the same period of last year. Already there is a formidable floating debt in existence which must be paid off in the March quarter, and what with supplementary estimates and general extravagance, the year may very well end with a deficit, while next year's Budget demands are certain to be monstrous.

Great Britain seems to have lugged Italy well into the Somaliland business, since its ships are co-operating in the glorious task of smashing the Mullah's allies along the coast. Well, if the Italian Government sees any prospect of gain or glory to be got out of the job, their powers of vision must be of the microscopic order. But why has France not been asked to join?

Until the transport service is reorganised, the "peace" mission to Tibet is hung up at Rinchengong. Fortunately the weather is comparatively mild for that altitude, and the troops therefore are not suffering much discomfort. But when winter really sets in we fear the unhappy native regiments will have a bad time.

The situation in the Far East grows blacker every hour, and the chances of an amicable settlement between Russia and Japan are small without Russia completely changes her attitude. It is all very well for the Czar's ministers to assure the world that peace and peace only is their aim, but the way they have conducted the whole of the negotiations gives them the lie. All through their aim has been to force Japan to swallow terms which are utterly impossible unless the Japanese are content to surrender their right to progress. Why the Czar has not insisted upon the whole matter being laid before his own creation, the Hague Tribunal, is hard to understand, for surely he has sufficient power left to impose this much on his bureaucrats. However, if war comes, Russia will have to bear the blame, and possibly the most serious effects, for her domestic affairs are in a very troubled state. The greatest hope of peace lies in the want of money, from which both nations suffer, and the difficulty which they will find in borrowing.

The federal elections in the Australian Commonwealth as finally made up indicate that the present Government there is in a hopeless minority should the two sections of the Opposition coalesce. Labour has obtained rather fewer victories than the earlier information led us to suppose, but it is still powerful enough to dictate the policy of the Government as the price to be paid for its support. In the Senate there are only ten Ministerialists against twelve of the Reid Opposition and fourteen Labour members, while in the House of Representatives the Ministerialists are only twenty-six against twenty-seven of the Opposition and twenty-two Labour members. Should the Opposition and the Labour faction coalesce the Ministerialists will be in a minority of sixteen in the Upper House and of twenty-three in the Lower. Some curious results are likely to follow from this remarkable sectionalising of the two Houses.

Attention is directed in the *Transvaal Critic* to what it calls "a stupendous public danger" contained in the amended gold law put out by the irresponsible legislative council in Pretoria. It justly says that the old gold law of the Boers was excellent, "one of the best mining laws in the world," requiring only a few minor improvements to make it about perfect. There was consequently no necessity whatever for its supersession, but it is now, it would seem, to be abrogated by a law that instead of protecting the small prospector, will throw the whole mineral wealth of the Transvaal completely into the hands of the capitalists. The public, in other words, is, as the *Critic* says, coolly deprived at one stroke of the pen of its chances secured under the existing law of pegging out claims upon property declared to contain gold, and it gives an instance of one farm "worth practically £13,000,000," on which 4,300 claims are available for sale. These claims are not to be sold singly or to be opened to the small prospector in any shape, but will be sold in blocks, which means that only large capitalists can buy. Well, the prospectors wanted their war and got it, so we do not pity them much.

We were told the other day that no more gold would go to the United States from London, and this week's purchases in the open market for that destination are represented as being the result of orders placed some time ago. Some even say that the gold went to Germany, not to the States. One excellent authority goes so far as to say that gold will come to London from New York before it again goes thither. We are doubtful about such forecasts and the New York exchange has been falling again these last few days in a way which suggests a possible early renewal of open market purchases on American account. The fact is it must be impossible to forecast the future because the United States are again obtaining money in this market in large amounts, principally by the sale of short term bonds, and the only favourable point in the existing state of the New York market is the fall in the price of short credit there. It has been abundant and comparatively easy this week, and will probably become very cheap when the dividends are released in January. Such cheapness is sure to raise the New York exchange and block the way to gold withdrawals from this side.

Laffan's agency announces that the Transvaal legislative council has decided to appoint a commission to inquire into the whole question of Asiatic trading in the Transvaal, and this may be good news. All depends on the composition of the commission, but the decision to appoint it shows that even the high and mighty irresponsible council has been impressed by the indignities heaped upon the natives of India. Their treatment is a disgrace to any civilised country, not only in the Transvaal but in Natal. All sorts of disabilities are devised to convert them into pariahs, one of the latest being an edict forcing them to live in a sort of Hindoo ghetto. There is no justification whatever for this treatment, and what it will be when the Chinese trader swarms into the territory we cannot imagine.

Efforts have been made this week to open a "bear" account in Russian bonds, but they have so far met with no success. We are rather sorry because although the "bear" may often be a noxious animal he has his uses, and had it been possible to kick the price of Russian 4 per Cents down 10 or 15, the fall would have tended to put a sharp check upon the war party now threatening to dominate imperial affairs in the Far East and bring on a conflict between Russia and Japan of a most disastrous kind. Unhappily there is no market here for Russian bonds, and it would seem very little market even in Paris. Whether the Russian debt is all packed up and locked away in the strong boxes of French investors or whether it is held in masses by the French banks we cannot say, but the bonds are certainly not to be found on the Bourse in floating masses.

Reports are, it seems, current in Buenos Ayres that the Chilian Government is issuing 20,000,000 dollars of Treasury bonds, and that it also wants to raise £30,000,000 in 6 per cent. bonds for the construction of public works. Well, the £30,000,000 will not be raised all at once, and if Chili maintains peace with all her neighbours the country can stand a good deal of capital poured in to develop it.

The Water arbitrators have given their decision on the claims of two more companies, the Grand Junction and the West Middlesex. To the first they have given £3,349,500, or if their decision on sinking funds is not

upheld by the Court of Appeal £3,562,500, the company having claimed £4,830,000. The West Middlesex are to get £3,524,000, which includes the cost of future distribution and liquidation, the award in this respect differing from the others the Court has dealt with.

It is a convenient method of burking awkward questions at company meetings to accuse interrogators of being "bears" on the shares, and endeavouring to depreciate the property, and we notice that this attitude was adopted by Mr. John Seear at the annual gathering of the Rhodesia Exploration and Development Company on Monday. Last week we referred to some rather unsatisfactory items in the accounts, and Mr. Alfred Marks, a shareholder, wished the chairman to throw some more light on various matters, but instead of giving straightforward answers to plain questions, Mr. Seear took refuge in a remark that he was "not going to be badgered by you or any other shareholders in reference to questions which to my mind are simply dictated by a desire to depreciate the value of the shares." Now this kind of talk is never indulged in when everything is as it should be, and we may find it necessary to return to the matter at an early date.

An amalgamation of the banking business of Messrs. Thomas Ashby and Co. of Staines with that of Barclay and Co., Limited, has been arranged, to take effect from January 1 next. Mr. John Ashby will continue in the management of the business as local director.

So the Rothschilds have allowed the great copper deposits in the Cerro de Pasco to pass out of their hands. "Great rejoicings" are reported in Lima over the formation of a Cerro de Pasco Tunnel and Mining Company by New York financiers. Its capital it said to be $12,000,000, and the wealth of Peru in copper and other minerals is undoubtedly more than fabulous.

New Zealand is terribly prosperous and ought to be able to raise another loan almost at once. The revenue for the eight months ended November 30 last shows an increase of £361,830 on that of the same period in the previous year, its total being £3,892,779. Scrumptious, is it not?

The directors of the Clerical, Medical and General Life Assurance Society have done well to reprint in pamphlet form the speech delivered by their new chairman, Mr. John Coles, at the recent annual meeting. It is the best speech on life insurance we ever read, frank, luminous and full of information put in a way so plain that the least instructed among the people can understand it. But we fear the facts Mr. Coles sets forth are calculated to excite envy in places.

An analysis of the working of 83 Lancashire cotton spinning companies during the past year shows that the period has been a most unsatisfactory one for the industry owing to the conditions prevailing in the markets for raw material. Out of the 83 companies dealt with only 29 were able to show profits amounting to £56,717, while the other 54 suffered losses of £92,307, or a net loss on all the companies together of £35,590. In the previous twelve months there were premonitory signs of such a result being almost inevitable, as the net loss of 85 companies was £1,436, but the eight years before that, were more or less substantially prosperous and to find anything corresponding to the present disastrous experiences we have to go back to 1893 when 99 companies faced a loss of £69,790 following on a loss of £94,770 in the preceding season. Durin the past twenty years there have only been six in which the trading has resulted in a loss, aggregating £257,000, and against these there have been fourteen profitable years, most of them highly so, and on balance the industry can point to a net profit over the whole period of £2,400,000. Shocking decay, is it not?

The Australian Mutual Provident Society is to be commended for the vigour with which it attacks the three monster American life offices that gamble in lives, and our old friend the Mutual Life of New York in particular. It has always been a matter for regret with us that our home offices have displayed such reluctance to engage in a vigorous campaign against the delusive interlopers. One day, we are quite certain, home offices will have cause to repent of their supineness because these American companies are steadily contributing to discredit life insurance in this country. When their true character becomes known to the community at large irreparable mischief will be done even to the best of our own offices. All the more pleased are we to find this powerful Australian life insurance society setting forth facts and manfully standing up against irresponsible corporations that must be regarded as amongst the greatest impostures of our time. Amongst the things it points out is that its premiums are less than those of the Mutual Life of New York, while its reversionary bonuses, accruing yearly instead of only at the end of five years, are enormously greater. Here is a contrast of policies of ten years' duration as at December 31, 1897:—

A.M.P. SOCIETY.

Ordinary Policies.

It is good news to learn that the Australian harvest is this year estimated at 76,000,000 bushels, presumably of wheat. This is 28,000,000 bushels above the highest previous total, and should materially contribute to keep the six settlements on their legs. They will have a large bulk of grain to export just at a time when we in this country badly want it.

If it be true, as Reuter says, that Russia is endeavouring to negotiate for a loan of £25,000,000 in Berlin, it would mean that France is tired of lending to that fermenting empire. We hope the news is true, because Germany cannot find the money, and if Russia is unable to borrow she will be unable to fight Japan or anybody else.

Is it true that the Manchester edition of the *Daily Mail* is printed on paper made in Sweden, and that a long contract has been entered into for its supply? Perhaps those great apostles of protection, Messrs. Harmsworth, will enlighten us upon the subject, and also explain how they manage to square the transaction with their principles.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

Penrith.—I do not think there is much rise in the stock you name, at least not in these times, but it is a good security, safe, in my opinion, to hold at the present price. But I should not buy more than £500 nominal of the stock.

The United Kingdom Stock and Sharebrokers' Directory for 1903-4. (London: Spottiswoode and Co., price 4s. 6d.), has attained its fourteenth year, and is undoubtedly one of the best works of reference of its kind.

We have received from Messrs. Mathieson and Sons their *Handbook for Investors for* 1904 (price 2s. 6d.), which constitutes a most valuable record of the Stock Exchange prices of the fluctuating securities for the past ten years, and also their *Mining, Highest and Lowest Prices, Dividends, etc.*, for the past six years (price 1s.).

Critical Index to New Investments.

*** *To assist subscribers of* THE INVESTORS' REVIEW *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* THE INVESTORS' REVIEW, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

NEW RIVER COMPANY.

Tenders are invited for £100,000 3 per cent. debenture stock "C" and £200,000 3 per cent. debenture stock "D" authorised by the Acts of 1896 and 1897. The stocks are redeemable at par on six months' notice, at any time after the expiration of twenty-five years from the date of issue, and on the transfer of the water undertaking to the Metropolitan Water Board will be secured on the whole water fund of that Board, and have in addition the security of the rates provided by the Act. Tenders must be delivered not later than 10 a.m. on January 14, and the minimum price at which these will be accepted will be fixed early in January.

WEST AUSTRALIAN CRUSHINGS.

The crushing return from Western Australia for the month of November was as follows:—Ore treated, 183,176 tons, for an output of 188,460 oz., showing an average yield of 1 oz. 0 dwts. 13 grs. per ton, which compares with the following figures for November, 1902:—Ore treated, 165,044 tons, yield, 187,037 oz., average per ton, 1 oz. 2 dwts. 16 grs. Thus the figures are again unsatisfactory, for though a greater quantity of ore was crushed, the quality continues very poor. Compared with the months immediately preceding, a slight improvement is noticeable, which may, or may not, promise better things. The amount of gold entered for export and received at the Perth mint was about the average.

Treasury, December 22, 1903.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Wednesday Evening.

Short credits have been hardening this week in the open Money Market, for the usual reason. Bankers are always pulled upon at this season by every branch they possess for cash, additional means of some kind, and as the London market works up to its full capacity at all times the consequences of withdrawals to supply cash to branches, usually feeders but for the time being become suckers, is to drive credit users to the Bank of England. It has accordingly been doing a fine business this week in loans at 4½ per cent., and on Monday and Tuesday in discount at 4 per cent. No special time limit has been put upon loans, nor, so far as we can learn, on discounts, and a good many of the short advances have been taken into January. To-day (Wednesday), however, the Bank only made loans no bills being offered to it. The open credit market being thus dependent upon the State Bank for its means, has also hardened up, and joint-stock banks have had no difficulty in getting 3¾ per cent. for such advances as they could lend over a week. Call money has fluctuated between 3½ and 4 per cent., with little of it to spare, except in the afternoons, when the additional sums obtained during the morning from the Bank made floating balances abundant over night.

Discount rates have, as is also common enough at this time, rather tended the contrary way, and remitted bills of all dates to arrive in January have for some days been discounted at 3⅜ per cent. Current business, however, has generally been transacted at from 3⅝ to 3¾ per cent. on three months' paper, and from 3½ to 3⅝ per cent. for six months' bills. These weakening quotations prove that the hope of cheap money in January still dominates men's minds. We shall not now argue about that point, but it will be a surprise to us if the middle of January passes without some appearance of scarcity again troubling the shrewd calculators. The truth, however, is that nothing can be sharply forecast at present. We are not even certain that the demand for Bank gold from New York has completely ceased, for although the New York exchange on London is distinctly higher than it was, renewed symptoms of weakness have appeared with sufficient emphasis to warn us against building too much upon being left alone from that quarter. Bills have not been very plentiful, and the downward dip of rates has, as mentioned above, stopped to-day's discount business at the Bank, but it continues to lend heavily at 4½ per cent. for a week or two into the new year.

The bullion movements at the Bank of England have this week been quite insignificant so far as exports and imports are concerned—only £87,000 net out—but currency must have been going into the provinces in lumps, only we cannot say how the figures stand owing to the fact that we have to go to press on Wednesday night, the day before the weekly Bank return makes its appearance. Another 500,000 sovereigns will leave Bombay this week for London. The demand for gold is still sufficiently strong in the open market for American account to render it probable that the supply arriving in the beginning of next week will be bought for New York, probably at a higher price than the nominal one of 77s. 10¼d. now ruling.

SILVER.

Quotations for bars were further depressed to 25¼d. per oz. for prompt delivery and 24 15-16d. per oz. for future metal, by a continuance of the sales from Singapore and other quarters. The Indian Government, however, has been a consistent buyer throughout, and as the rupee reserve of the Treasury, according to the latest return is down to 9½ crores, including 1 crore in transit, the demand seems likely to be heavy for some time to come. Tenders are also invited by the French Government for the delivery of 20,000 kilos. early in January, and with a cessation of the selling pressure prices rebounded to 25¾d. and 25 9-16d. per oz. respectively, or net improvements compared with last Friday's figures of ⅛d. and 5-16d. per oz. Applications for the Rs. 60,00,000 of India Council drafts offered this week amounted to Rs. 2,75,00,000, all in bills, and tenders at 1s. 4 3-32d. per rupee received about 24 per cent. Next Wednesday another Rs. 60,00,000 will be offered.

The following bullion movements on foreign account have taken place at the Bank of England since our last issue.

Stock Market Notes and Comments.

All we can say in this column to day is to cordially wish the many faithful supporters of the Investors' Review a better year in 1904 than the one now disappearing has been. There is much room for improvement, and perhaps next year may end better should the world's peace be kept. Yet we cannot promise immediate improvement, and fear that the business of this journal must still be far more to try and prevent people from losing the money they already have than to indicate ways in which their wealth may be increased. There are no markets this week to talk about, and will be none until the cloud in the Far East is dissolved one way or another.

The Week's Stock Markets.

Stock markets commenced the week in a state of Japanese fright, but have calmed down a little since. Monday's Far Eastern telegrams were certainly very disquieting, and the Stock Exchange, always completely in the dumps or up in the skies, was quite sure that an open rupture between the opposing powers was only a matter of hours. Later, however, the news seemed more reassuring, and it was stated in pretty good quarters that at worst there will be no breach of the peace this year. This brought the bears on to cover with some rapidity, and unless anything happens to-morrow to cause fresh disturbance markets will probably finish up tolerably steady. Consols naturally began badly, and did not cease falling until the cash price reached 87 13-16. There was a sharp rebound from this, and quotations close ⅜ lower, at 88 3-16 to 88 5-16 for cash, and 88 5-16 to 88 7-16 for the account. Transvaal scrip fell away to 97¼, or a loss of 1, and War Loan stock was slightly easier at 97. Childers 2½ per cent. receded ¾, Bank stock lost 1, and India Sterling loans all dropped ½. Turkish

Guaranteed Loan finished 1 easier. Amongst Home County and Corporation stocks, London County 3 per cent., Metropolitan 3½ per cent., and Huddersfield 3 per cent., all dropped 1, and in the Colonial list Newfoundland 4 per cent. consolidated advanced as much.

Japanese bonds came in for very severe handling on Monday, and a rather large business was put through. Soon after the start the sterling bonds were driven below 80, the new 5 per cent. fell to 88¾, and the old 5 per cent. declined to under 90, and although some faint recovery took place after the first shock, closing figures

reveal losses of 1 to 2. Some banging was also attempted of Russian 4 per cent., but it had little result, chiefly because there is little market in the bonds either here or on the Continent. One or two of the Railway bonds, however, finished 1 lower. Chinese bonds came under the prevailing gloom on the fear that the country may be drawn into the conflict should one occur, and several lost 1. Amongst South American issues, Argentines and Brazilians were depressed ½ in a few instances, and Uruguay 3½ per cent. receded ¾. Uruguay 5 per cent. were steady on the result of the half-yearly amortisation. The amount to be applied for redemption was £14,667, and the tenders amounted to £89,760, ranging from £81 5s. to £85 per cent. Tenders of £16,200 at £81 10s. and under, were accepted in full, while those of £2,000 at £81 12s. 3d. were taken to the extent of 90 per cent. Europeans weakened on modest Continental selling, but did not close at the worst, and amongst active issues nothing left off more than ¾ lower. That much was lost by Turkish Unified, and here and there a decline of ¼ or ½ was also noticeable. Turkish priority lost anther 2, and no important upward movement emerged at the end.

The influence of the realisations in North-Western stock was said to be still felt in the Home Railway market on Saturday, but it was not so much that as the nervous tension regarding the state of affairs in the Far East which caused the list to be heavy throughout. A number of serious declines have been recorded during the past two or three days, among the most prominent being a fall of 2 in South-Western ordinary, accompanied by losses of 1 each in the preferred and deferred, without apparent cause. Central London deferred receded 3, Metropolitan, which was thrown out by nervous bulls, relapsed 2½, and District went back 1. North-Eastern was 1 down, Brighton issues relapsed 1, and declines of ½ to ¾ struck Great Western, Great Northern deferred, Hull and Barnsley, Chatham ordinary, Midland preferred and deferred, and South-Eastern deferred. At this period of the year the various companies formulate their proposals for fresh expenditure, and seek powers for the creation of further capital. The North-Western seeks permission to raise £300,000 by ordinary or preference stock, and £100,000 by debenture stock; the Great Western wants £1,000,000 in ordinary and preference stock and borrowing powers of £333,000, and the Midland £300,000 in preferred and deferred converted ordinary stock, or 2½ per cent. perpetual preference stock, and £100,000 in debenture stock. Then,

the Lancashire and Yorkshire asks for £360,000 in ordinary or preference stock, and £120,000 in debenture stock, in connection with an intended purchase of steam and other vessels for the convenience of passengers, minerals and goods between Goole and Hull and various Continental ports, and the Chatham propose an issue of 3½ per cent. debenture stock up to £1,250,000, in order to pay off the company's proportion of the capital expended by the Managing Committee, now amounting to £806,220, of which £333,760 has been already advanced out of the general assets of the company, and £472,455 has been lent by the South Eastern.

The American section alone showed any capacity to resist the general depression, and the little strength it had was entirely due to efforts to prevent any serious slipping back on the part of New York, where insurance companies and other financial institutions are asserted to be busy over "window dressing" manipulations. Prices on this side dropped below parity levels each morning with the regularity of clockwork, only to be pushed up again after Wall Street opened. The propping, however, was not altogether continuous and immediately it was removed quotations eased off, with the result that closing figures were by no means the best. "Coaler" shares were the firmest, Reading ordinary putting on 1, Pennsylvania ½, and Ontario ¾. Southern Pacific, Erie Ordinary, and Milwaukee also gained ½, and Unions ¼. On the other hand Atchison preference and Norfolk common fell 1, and Denver ordinary and Chesapeake ½.

After a preliminary hardening on Saturday Canadian Pacific shares relapsed in sympathy with the Yankee market and closed with a loss of ½. Grand Trunk stocks were also dull, and with extremely little doing in them, the ordinary fell ¾, the first and second preferences ½, and the thirds 1. Indian Railways were hardly mentioned, and the solitary change was an advance of 1 in Bombay and Baroda stock.

Profit taking dominated the Argentine Railway market, and a considerable business in the principal speculative favourites caused prices to fall substantially. Pacific ordinary went back 2 and the two preferences 1, Rosario ordinary and deferred lost 2½ and 2, and Buenos Ayres Great Southern 3. Argentine Great Western ordinary declined 2, the ordinary debenture stocks of the North-Eastern Company 2 and 2½, Bahia Blanca North-Western preferred 4, Buenos Ayres Western ordinary 1, and Cordoba and Rosario and Cordoba Central issues were from 1 to 3 down. Central Uruguay of Monte Video ordinary receded 3. Mexican Railways were weak to the end, notwithstanding the recovery in the price of silver, the ordinary closing ¼, the first preference 1½, and the debenture stock ½ down. Mexican Southern ordinary receded 1.

Miscellaneous markets as a rule were dull with fractional losses in active securities, but Waterworks provided an exception, these stocks being advanced in rather sensational fashion on the latest awards of the Arbitration Court. The Grand Junction Company asked £4,830,000 and obtains a minimum of £3,349,500, or £3,552,500, should the decision on the Staines Reservoirs capital be in its favour. As a result the "A" stock shot up 12½, the "B" 8, the "C" 2½, and the "D" 5½. Then the West Middlesex Company gets £3,524,000, and a rise of 15 in the ordinary stock resulted. Other issues were favourably affected, Kent gaining 10 and the new stock of the same company 5, together with Lambeth and Chelsea. Southwark and Vauxhall rose 7½, but East London fell away 2. Coming to other sections, Dock stocks were steady, although London preferred lost 1, and Shipping securities lifeless. South Metropolitan Gas dropped 1, and Welsbach were a little dull, but Gas Lights stood as before. Telegraph stocks gave way here and there, and National Telephone deferred further receded to 77½. London General Omnibus declined 1. Oil shares were still inclined to fall back, and American brewery issues likewise reacted after the recent rise. Catering and Meat shares can be called steady, because nothing was done in them. Cotton and other textile issues developed a heavy tendency, and amongst Iron and Steel descriptions South Durhams continue to weaken. Another circular has been issued by the company's directors pointing out that shareholders are not obliged to exchange their holdings into Cargo Fleets, and can retain their present position should they choose, but this does not meet the objections raised to the proposal, and the whole scheme should still be vigorously opposed. United States Steels

showed a slight improvement. Hudson's Bays closed 1½ down.

Stock markets finish steady with very few movements compared with yesterday, and no incident anywhere. At the start it looked as if the peace idea would get the upper hand, and Consols moved up 1-16 or so, then doubts spread and the market slipped back again leaving off in a stagnant, waiting attitude.

Notes on Books.

Poor's Manual of Railroads. (New York: 68, William Street; London: Effingham Wilson).—The volume just issued makes the thirty-sixth of the annual series of this reference work which may be truly described as indispensable to all interested in American affairs financial. From the title it might be supposed that the book dealt entirely with the railroad systems in the United States, but its scope is very much larger than that. Full particulars are also given of Canadian and Mexican railroads, street railways in America and Canada, the principal Yankee industrial trusts, and the State, County and City debts of the Union. We have not sufficient space to deal with the wealth of details contained in these sections, but must confine ourselves to a study of the introduction which as usual consists of a mass of carefully compiled and elaborate statistics relating to the growth and progress of United States Railroads in 1902. These show that 4,365 miles were added during the twelve months, making 203,132 miles in all, but the total completed during the fiscal years was only 199,685 miles. The cost of this addition was £19,898,869 in stock and £85,588,285 in loan capital, after allowing for a small decrease of £375,934 in the unfunded debt, bringing the totals issued up to £1,215,658,129 and £1,293,058,168, or £2,508,716,297, in addition to an unfunded debt of £62,069,173 making the cost per mile £12,656, a figure which seems monstrously heavy considering the rough nature of much of the track, and one which has certainly not been justified by results.

On the 197,438 miles, including 2,249 miles of "trackage," owned by those companies making returns of their traffic statistics, the revenue train mileage amounted to 934,413,448 miles, of which 403,213,178 miles were due to passenger and 508,210,140 to freight traffic, the number of passengers having been 655,130,236, and of tons hauled 1,192,136,510, equivalent to 19,706,908,785 passengers and 156,624,166,024 tons carried one mile. The growth of the traffic has necessitated changes in the composition of the roads, and out of a total of 274,835 miles of track, 257,437 are of steel rails, or 93.6 per cent. of the total mileage compared with 92.7 per cent. in the previous year, and only 29.1 per cent. in 1880. For the same reason rolling stock has had to be added to very considerably, and whereas in 1880 17,949 locomotives sufficed to provide motive power, and 12,789 passenger, 4,786 baggage and express, and 539,255 freight cars met all requirements, there were at the end of 1902 41,626 locomotives, 27,364 passenger, 9,726 express and 1,503,949 freight cars in use. Along with this growth in traffic the haulage power has been steadily increased so that in spite of a decrease in the revenue, both per passenger and per ton per mile, the gross earnings per mile of railroad have risen from $6,875 in 1890 to $8,696 last year. In the first mentioned year the average receipts per passenger per mile were 2.174 cents, and in 1902 they were 2.012 cents, yet the average receipts per passenger rose from 52.13 cents to 60.52 cents, and the distance travelled increased from 24.05 miles to 30.08 miles, while the average number per mile was 37 higher at 3,331. During the same period the average receipts per ton per mile fell from 0.927 cents to 0.764 cents, while the average receipts per freight train mile improved from 152.17 cents to 235.57 cents, owing to the average haul per ton being 131.38 miles against 114.55 miles.

The gross earnings of all the steam surface railroads in the United States increased from $1,086,039,735 in 1890

to $1,720,814,900 in 1902, and net earnings from $342,071,296 to $560,026,277, but miscellaneous receipts did not make so much progress, with the result that the available revenue was only $185,496,836 higher. Gross and net earnings per mile, which were $6,875 and $2,166 respectively in 1890, rose to $8,696 and $2,830 in 1902, i.e., out of a gross increase of $1,821 no more than $664 was saved as net. Owing largely, however, to a reduction in interest charges on bonded debt from 44.4 per cent. to 4.09 per cent., the return in dividends on the share capital rose from 1.82 per cent. to 2.93 per cent., a movement which is certainly satisfactory, although the result even yet cannot be considered as in any way adequate. Going back still further to 1883 we find the comparison in many ways even less favourable to the present time. In that year with averages of 1.224 cents per ton and 2.442 cents per passenger per mile, the gross earnings per mile came to $7,405, and the net to $2,679, or only $1,291 and $151 less than for the twelve months to December 31, 1902, the percentage of expenses to earnings being 63.82 per cent., compared with 67.45 per cent. At that period the average rate of interest was 4.94 per cent., but the average dividend paid was nevertheless 2.76 per cent., or within 0.17 per cent. of the latest figure given.

The Real Cause of the Commercial Difficulties of Great Britain. By Cecil Balfour Phipson. (Price sixpence. London: William Hutchison, Trafalgar Buildings, Charing Cross.)—Mr. Phipson writes with great earnestness and care, and in this pamphlet unquestionably masses together the results of a great deal of hard thinking. We are, therefore, sorry to say that all the labour and thought seem to end in nothing substantial. Following the late Mr. Mulhall, one of the most romantic statisticians who ever compiled masses of figures, he says that 97 per cent. of all payments made in Great Britain are by cheques, and only 3 per cent. by coins and notes, and, therefore, he seems to think that we might have a cheque currency, as peculiarly "British money," which would lift us out of the rut of gold payments or metallic payments of any kind, doing wonders to our foreign trade. If that is what he means, we should like to ask him how cheques are to get a fixed value in relation to commodities. It may be that under our present system the cheque often stands in relation to gold much as the piece of bacon stood to the Irishman's dinner of potato and point, but it is none the less true that without the gold in the background, which every payer and receiver of cheques accepts as the measure of value, paper money of that kind could not circulate for a day. Mr. Phipson ought to acquaint himself with the practical side of commerce before venturing to theorise. He admits that cheques are popularly supposed to be the tokens of sovereigns or bank notes, but seems to contend that they merely represent drafts upon banking deposits, promises to repay in gold a thousand millions of deposits—we did not know the United Kingdom had so much—practically the whole of which has been lent out to merchants and manufacturers, stockbrokers and speculators of every kind. That may be so, and yet in the last resort gold must be paid if demanded. How, then, are we advanced on the way to escape from our commercial difficulties? Well, as a matter of fact, these commercial difficulties do not yet exist. They will only come into existence when the false prophet of Birmingham gets his way.

The Science of Civilisation, or the Principles of Agricultural, Industrial, and Common Property. By Cecil Balfour Phipson. (London: William Hutchinson and Co.)—Much the same has to be said about this book as about the pamphlet noticed above. It is the work of a man very much in earnest, exceedingly well read, thoughtful, and most anxious to find a solution for the more or less perplexing economic problems of the day, but one cannot feel in reading, or trying to read, it that the author really gets to the bottom of the mechanism of business, and many of his propositions look for that reason alone highly disputable. So much is this the case that we must candidly confess our inability to read the book through. It is no use, therefore, to pretend that we have mastered it throughout in a way to be able to criticise in detail. In places we have found much to agree with, after a fashion, but not enough to draw us on to give the time necessary to a careful reading of the whole work. All we can do is to commend Mr. Phipson for his great industry.

Health, Wealth, and Wisdom. (London: Methuen and Co. Price 1s. net.)—We are not quite sure about the "Health" part of this book. It sometimes degenerates into something approaching twaddle and not infrequently gives counsels of perfection. On the whole, though, it is shrewd enough and contains a great deal of excellent advice, although we by no means endorse the writer's enthusiastic advocacy of a cold bath every morning all the year round. To a great many people that sort of thing would mean an early grave. That is only one example of a tendency to overdo the physical culture craze now so fashionable. Quite other language, however, must be used in dealing with the other portions of the book, Wealth and Wisdom. The publisher tells us they are by another hand and that is obvious enough. Both sections are written in a bright, cultured style, suffused with a kindly humour, amusing and instructive anecdotes, abundant literary references showing wide reading, and altogether convey a great deal of instruction in a happy manner. Perhaps the Wealth section represents the higher literary excellence of the two, but Wisdom is also written about in a most attractive style, and the book is thus lifted far above the usual level of publications to be bought for a shilling.

The Results of the Census of England and Wales in 1901. Compiled by William Sanders, and produced under the general supervision of T. G. Ackland, F.I.A. (London: Charles and Edwin Layton.)—Though professing to be nothing more than a digest of the results of the 1901, this handbook contains valuable explanatory notes, in addition to tables extracted from the voluminous folios issued by the Census Office. Therefore to all interested in social questions and the social side of our political life the book is of extreme value, since it saves the weary task of wading through the mass of information contained in the official reports.

The Daily Mail Year Book, 1904. Edited by Percy L. Parker. (London: Amalgamated Press, Limited, price 1s. 6d.)—By far the greater portion of this volume is filled with fantastic facts and figures relating to the fiscal question, and though professedly impartial, its real aim is to spread the raging tearing propaganda of Mr. Chamberlain. The biographical section is funny though not of very much practical use, except to the man in the street for whom perhaps it has been compiled.

Encyclopædia of Accounting. Vol. 3. Edited by George Lisle, C.A., F.F.A. (William Green and Sons, Edinburgh and London. Price 20s. net.)—This volume carries the encyclopædia from "farthing" to "judicial factor," and includes, amongst others, special articles by capable writers on various financial subjects, fire insurance, fraud in accounts, bookkeeping with special reference to flour mills, hardware factor, hide, skin, etc., auctioneers, hotels and ironworks with specimen pages of the books in each case. The name of David Deuchar, F.I.A., F.F.A., F.R.S.E., is sufficient guarantee that the article on fire insurance is reliable. Mr. Deuchar, who is the general manager of the Caledonian Insurance Company, deals fully with the conditions under which fire insurance is carried on in the British Isles and in the United States. Mr. R. H. Cary, lecturer on commercial subjects for the School Board for London, writes on "Foreign Banking," and in the limited space at his disposal has succeeded in giving a series of interesting essays on the history and modern conditions of banking in America, Germany, France, Holland, Italy, and Japan. "Foreign Currencies and their treatment in Home Accounts," by the Editor himself, is a useful exposition of the various methods used by English companies trading abroad in converting their accounts into sterling, and Mr. Lisle is also responsible for articles on "Income Tax Returns," "Income Tax Tables," and "Index

Numbers." "Investments," by Mr. W. Gordon Campbell, solicitor (late H. M. Legal Vice Consul and Registrar of the Supreme Consular Court at Constantinople), deals chiefly with trustee stocks, but the author gives some sound practical hints to investors generally, which if carefully followed would prevent the loss of many a pound. Many other subjects are dealt with by experts, including one on "Irish Bankruptcy Law," which has been added at the request of many subscribers, but we need not go further into details here. Enough has been said to show that the work when completed will form an indispensable addition to the library of every business man.

Amongst the pamphlets we have lately received is "An Address on Politics and the Trend of Parties," by Mr. A. Worsley, which contains many pungent sentences and much shrewd criticism on current political affairs. It is well worth reading. It need hardly be said that Mr. Worsley is a keen critic of all political parties, and a determined one of the present Government, with its High Commissioner and its Chamberlain demagogue as wirepuller behind the scenes. There are some very effective notes upon the facts brought to light by the War Commission.

MINING NOTES AND NEWS.

On the eve of Christmas and with threatening war clouds over our heads, to say nothing of the approaching close of a nineteen-day account, no one was sanguine enough to expect active markets. The only business done has been some real and some "bear" selling, consequently quotations have receded all round. This week, therefore, we may dismiss the entire mining market in a few words, for all alike have been depressed and nervous. Christmas-eve, our day of publication, is mining contango day, the preliminaries of which were entered into on Wednesday. Dividends have been declared by two of the subsidiaries of the East Rand Proprietary Company, viz., 20 per cent. by the Angelo Gold Mines and 15 per cent. by the Driefontein Consolidated Mines, also 112½ per cent. by the Ferreira Company and 30 per cent. on the De Beers deferred. But these have attracted no more public attention than did the dividends declared a week ago. Business in the Kaffir section has been on a minute scale, and we hear little or no talk of the "boom" that is to come with the first batches of Chinese labour on the Rand. In the few days in which the market has been open falls have accumulated in the South African section, and there may be some biggish differences to face.

The Johannesburg correspondent of the *Financial Times* cables that an important scheme has been arranged to explore, by means of diamond drilling, certain outcrop mines of the Germiston district for the Rietfontein reef series, which is supposed to underlie them at a considerable depth. Boring is to be commenced north of the main reef outcrop on the New Primrose property. As these are Barnato companies, it would seem to be another Barnato undertaking, but the same correspondent says the cost of the exploratory work is to be defrayed by other companies belonging to various groups, viz., by the Geldenhuis Estate, Simmer and Jack Proprietary, New Primrose, May Consolidated, Glencairn Main Reef, and Witwatersrand (Knight's) companies, and operations are to be started immediately. "If the results are favourable," the cable adds, "the scheme will be of immense importance to the Rand generally, and more particularly to the three first mentioned companies, in consequence of the large areas owned by them north of the main reef outcrop. This will be the first serious systematic attempt to prove the northern reef series at depth."

The correspondent likewise sends a cable to the effect that it is authoritatively estimated that the voting of unofficial members of the Legislative Council on the Chinese importation questions will result—eight in favour to four or five against.

At a mass meeting held in Cape Town on December 19 a resolution was passed by an overwhelming majority opposing the introduction of Chinese labour into the Transvaal. Mr. Schreiner, the ex-Premier, maintained that the question was one for the whole of South Africa, and called upon the meeting to give a guide to public opinion in England, which was groping in the dark. An overflow meeting, addressed by Mr. Merriman, adopted a similar resolution.

We have also to record a downward movement of prices in the Jungle, West Australian, Egyptian, and miscellaneous markets, where no support of any kind has been manifest. On the whole the falls are not so heavy as amongst Kaffirs, but they will not help to make the forthcoming making-up list a joy-inspiring spectacle. Amongst copper shares Rio Tintos are the principal sufferers, through freeish offerings.

Johannesburg Consolidated Investment.—Some weeks ago the annual meeting of this Barnato company was held at Johannesburg, and Mr. Carl Hanau, of Coronation Reef fame, presided. Summaries of his lengthy oration were sent to this country by means of the various press agencies, and we duly commented upon the few facts that came forward. The complete report and accounts are now before us, and we are asked to gaze with looks of admiration, mingled with envy, upon the colossal wealth this company has accumulated. A year ago we recorded the fact that for 1901-1902 the balance-sheet displayed the substantial credit balance of £658,144, but after much mental thought and profound cogitation, the directors could not venture to distribute more than £271,000 of this, in a 10 per cent. dividend, for to dissipate prodigally any more of this wealth would plunge it into serious financial embarrassment. Into the present accounts, therefore, they can bring the sum of £387,150, which compares with only £67,786 in the preceding year, and though revenue has considerably increased from some sources, the credit balance has only slightly benefited. Thus we cannot sincerely feel any unwonted enthusiasm in contemplating the net results of the past twelve months' operations. Probably owing to the market inactivity and the indifference of the public, the directors did not venture to sell many of their stocks and shares, as the profit from this source was merely £70,620, compared with £503,810. Interest and commission, on the other hand, gave £32,170 more at £114,782; rents and licences brought in double as much at £54,829; dividends on investments yielded an additional £20,000 at a total of £73,839, whilst £39,417 from the extension of leases represents a fresh source of income. Notwithstanding the acute depression in the Kaffir market during the year—the company's accounts are made up to the end of June—the directors provide £15,530 less for depreciation on stocks and shares at £22,802, and after allowing for other outgo, the credit balance stands only £7,326 higher at £665,470. If we deduct the previous balance of £387,154, the net profit on the year's operations amounts to £278,316, against £590,358, a tremendous shrinkage, which would be concealed from public gaze if observers took the trouble merely to glance at the profit and loss account. That is to say, it looks as if the company increased its profit by £7,300, instead of suffering a diminution in net revenue of £312,042. Where is this colossal credit balance which the directors so proudly display? Dispersed amongst the assets, helping to account for the following increases in them:—Loans on the London and Johannesburg Markets, £37,000; investments in stocks and shares, £343,000; investments in ground rents, £15,000; investments in mining properties, £7,000. On the other hand, there are decreases of £25,000 in loans to mining and other companies; of £46,000 in loans on bonds, and on security of real estate,; of £5,000 owing by sundry debtors, and £150,000 in the investments in real estate. The reserve fund is stationary at £1,000,000. Money on deposit and on loan has grown from £564,602 to £820,350, but bills payable have been reduced from £208,035 to £126,060, showing an increase in the liabilities of £174,000. The book value of the stocks and shares is £2,332,738, but the report informs us their market value on June 30 was £3,029,294, showing an appreciation of nearly £700,000. But a substantial portion of this appreciation has probably been dissipated by the continued shrinkage in market values up to the present time. It is impossible to apply any test, as details of these assets are not given, but the majority of them consist of holdings in a number of other Barnato companies. "During the year," says the report, "the position of the gold mining companies in which we are interested has improved, notwithstanding the disadvantages under which mining has been conducted, owing to the insufficient supply of unskilled labour, and your directors are pleased to be able to report to you that their anticipations of last year, of being able to announce a revenue from dividends paid by the gold mining companies in which this company is interested, have been fulfilled. The following companies have paid substantial dividends, viz.:—Ginsberg Co., Limited, 15 per cent.; New Primrose Gold Mining Company, 10 per cent.; and Rietfontein "A" 10 per cent." Whence, however, has the money for these dividends come? We analysed their accounts some months ago, and showed that some of it came mainly out of market premiums on fresh issues of shares. Is that an achievement to boast of? With all its wealth, however, the company cannot afford to distribute more than 10 per cent., as in the previous year. This will absorb £270,989, and leave a balance of £394,481 to be carried forward, as a safeguard against unforeseen disasters or accidents. An interesting memorandum on the liability side of the balance-sheet is the company's guarantee of £150,000 to the Transvaal War Loan, showing us that even such grave and reverend seigniors as Carl Hanau and Solly Joel are not lacking in humour and a sense of the ridiculous.

Barnato Consolidated Mines.—A few weeks ago we gave some of the figures of the financial results of this company's business during the twelve months to the end of October. With the detailed accounts before us, we are able to make some comparisons and find the changes to be, on the whole, trifling. The profit made on realising shares was about £4,000 more, at £18,419. In the present profit and loss account are two additional credit items, viz., £25,110 from dividends on investments and £2,042 from interest. Administration outgo is nearly £3,000 lower, and the usual £50,000 has been written off for the redemption of the purchase of the vendors' interests. The balance brought in was £224,887, compared with £268,182, and the credit carried to the balance-sheet is £9,290 lower at £215,596. Of the company's holdings the shares selected for selling were 11,508 Main Reef Wests, which reduces the company's interest in that company to 52,778 shares. Considerable changes have taken place in other share assets. The company's holding of 67,337 shares in the Lindum Gold Mines has been converted into Randfontein Deeps, which company took over the claims of the Lindum. Boring operations have been in hand for some time, and in his speech at the meeting Mr. Carl Hanau said that several leaders have been intersected at a depth of 4,236 ft. The borehole is being continued, and the directors hope to intersect the Main Reef series at an early date. As the property is a large one, it is the intention of the board to divide it into two separate companies, and the Barnato Consolidated holding in it numbers 48,668 shares. The Chimes Mines, Limited, has now been merged into the Van Ryn

Deep, Limited, and the Kleinfontein Deep, Limited. Accordingly the 325,000 Chimes Mines shares were exchanged for 114,075 Kleinfontein Deep and 359,925 Van Ryne Deeps, but an arrangement was made subsequently with the Anglo-French Exploration Company by which the Barnato Consolidated received 95,426 Kleinfontein Deeps for the same number of Van Ryn Deeps, whilst 100,000 shares in each were subscribed for at £1 each, leaving the present holdings:—309,501 of the former and 364,499 of the latter. A bore-hole is being put down on joint account for the purpose of accurately determining the position of the proposed vertical shafts of both companies. During the year the company's 64 claims on Klippoortje were sold to a company called the Angelo South Mines, Limited, for 60,000 shares, in addition to which 33,644 shares were subscribed for at 30s., making a total holding of 93,644 shares out of an issued capital of £501,000. The other deal was the purchase of 6,489 Transvaal Estates and Development Company shares, with whose report and accounts we dealt in our last issue. In the balance-sheet the shareholdings are now valued in the lump at cost at £1,307,351, against £1,290,073 a year ago. Sundry debtors owe a trifle less, but cash has increased £16,924 to £170,881, and of this £170,686 is employed in the contango business. On the liability side, the biggest changes are the reduction of £10,000 at £3,000, representing the licences in suspense, and a similar big shrinkage in the amount owing to sundry creditors to the small sum of £272. Owing to the undeveloped condition of the properties of several of the companies in which the Barnato Consolidated has substantial interests the directors are obliged to allow another year to pass without declaring a dividend, as these companies will probably want financing. So the credit balance of £215,597 is carried forward, a wise step enough.

Vogelstruis Estate and Gold Mines.—Not without a feeling of thankfulness the directors of this company announce in their report that crushing was resumed with 30 stamps in March of the present year, so that revenue for some four months was swollen by the proceeds from gold mining. It appears, too, that despite the lamentations of the dearth of blacks this third rate concern has now been voted a complement on the basis of 2,000 natives, which will make it possible to increase the number of stamps to 40, and allow sufficient labour to push on the development work. The gold won realised £27,699, licences brought in £1,909, and rents £143, with smaller sums from other sources, and after allowing for ordinary mining and administrative outgo, debenture interest, and £15,794 for depreciation, a debit of £25,749 has to be carried to the balance-sheet. There was already an accumulated adverse balance of £98,145, so the company is now burdened with a loss of £123,894. It is also weighted with heavy liabilities in the shape of a loan of £9,973, carrying 6 per cent. interest, sundry creditors £6,376, and bills payable £5,432. Available assets are only £91 in cash, £119 owing by debtors, and some gold in transit valued at £9,507. It will, therefore, take the directors some considerable time to put the finances on a strong basis, and future profits will have to be employed to this end before they can become available for distribution. The directors have again generously decided to waive their fees on the condition that when the financial circumstances of the company permit it, a vote of the shareholders shall be taken to award them such remuneration as they consider fair in respect of services since June 30, 1897, the last date on which the directors took their fees.

Klerksdorp Gold and Diamond Company.—The report and accounts of this company cover the period from its incorporation to the end of June. After trial crushings, extending over four months, and involving the treatment of nearly 10,000 tons of ore, the directors have, on the advice of their responsible officers, definitely decided to dismantle such portions of the original plant as are unsuitable to the proposed alterations, and proceed with the erection of a 50-stamp mill. Close attention has been given to the development of the underground works, with the result, the report says, that the mine has been proved to be of far greater value than was originally supposed. There is reported to be at present fully 92,400 tons of ore in sight that will average 9½ dwts. of gold per ton, which, it is estimated, will leave a clear profit of £46,000. The consulting engineer estimates there are many millions of tons of ore in the mine of similar average value, whilst the directors remark that the importance of the now established opinion that the reef being worked in the mine belongs to the Kimberley series of reefs cannot be over-estimated; moreover that the establishment of the Klerksdoorp reef as belonging to the Kimberley series carries with it the logical conclusion that the main reef series underlies the whole of the property. That may be so, but the "logical conclusion" from this is not that the main reef series will assuredly yield large profits and dividends, for it has not done so in innumerable cases. It must be left to time to prove or disprove this. The best that can at present be said is—there is hope. Meantime the finances of the company could do with a little strengthening.

Luipaard's Vlei Estate and Gold Mining Company.—We learn from the report of the directors of this company to June 30 that the regular development of the mine was resumed on November 1, 1902, and has been carried on since without interruption. The directors are of opinion "the progress made is very satisfactory, considering the limited and somewhat inferior supply of native labour, which it has been possible to obtain," the manager reporting that on August 31, 243,367 tons of ore were developed, of which 150,837 tons show an average of 10 dwts. to the ton, 38,030 tons with 6 to 7 dwts., and 54,500 tons of 3 to 4 dwts. For some time past the directors say they have been considering the advisability of resuming crushing, and have been in constant communication with the consulting engineer on the subject. The latter has reported the occurrence of a considerable amount of coarse gold in the ore recently discovered, for which a purely cyanide treatment would not be suitable, and for this and other reasons recommends changing the present mill to a wet crushing mill, in which the coarse gold would be recovered by amalgamation. After consultation with the local committee the directors have resolved to adopt this recommendation, and have requested the local committee to have plans prepared forthwith for carrying it out. During the twelve months the company received £12,718 from licences, £4,441 from interest on loans, £240 from transfer fees, and £679 from rents, leaving a small profit of £301, after deducting all outgoings, increasing the credit balance to £10,555. There is no need to be anxious regarding the company's financial position.

South West Rand Mines.—"As during the period under review hardly any improvement has taken place in the conditions of the mining industry in the Transvaal, the directors have deemed it inadvisable to attempt taking steps for the proving of the company's ground, more particularly of the No. 2 mynpacht, in which, shareholders will recollect, it has been asserted by mining authorities that the extension of the Randfontein series will be struck." So say the directors in their report to September 30, and it is not exactly news that will bring joy to the shareholders. However, they think "that the time is approaching when the conditions affecting mining on the Rand will be materially altered for the better," and then they will commence the grand work of boreholing. The revenue from claim licences was £2,553, from dividends and interest £984, and from transfer fees £24, but the outgo exceeded this by £1,873, the profit and loss account being charged with £2,044 for depreciation on debentures and shares and loss on realisation of securities. The debit balance now stands at the respectable figure of £38,227, and the company is in rather tight circumstances. Philanthropists, with ready cash, would find a deserving case here.

Buluwayo Consolidated Goldfields.—The directors in their report to June 30 have more to say about what neighbouring companies are doing than about their own properties. A couple of companies appear to have discovered reefs by prospecting work, and the sanguine board of the Buluwayo Consolidated consider these finds have "a most important bearing on the value of this company's claims," as they are situated in a direct line between these and the claims of the other companies. But what will rejoice the hearts of the shareholders most is the promise held out that "the directors hope, in the near future, to be able to deal with the question of doing some prospecting work on the company's "Long John claims." Here is a brilliant prospect, indeed! Something for the youthful shareholders to look forward to in old age, and something which elderly ones can bequeath to their great grand-children. As regards other properties elsewhere, instructions have been given for the abandonment of all but the more promising, and these have been protected until June 30, 1904. Meanwhile the debit is steadily mounting up, and at this rate it may attain mountainous dimensions by the time the directors make up their minds to start prospecting work. Suppose prospecting should not discover a reef? Last year interest brought in £76, and transfer fees 15s., this being the entire revenue, the outgoings exceeding it by £1,379, which increases the accumulated loss to £7,543. Cash totals £1,271, and debtors owe as much as £6, against creditors for £1,907, and contingent liabilities amounting to £6,687. Some "investments" are valued at cost at £9,178, the auditors remarking they are unable to form any estimate of their present value. Do they consist of the 42,450 shares held in the Rhodesia-Selukwe Development Syndicate?

Globe and Phœnix Gold Mining Company.—In an interim report issued by the directors of this Rhodesian company, there is loud and long lamentation over the scarcity of labour in the colony, ending in a pathetic appeal for Chinese, after the manner of speeches recently delivered at Cannon Street Hotel meetings. For a few months of the year, we are told, the labour at this particular mine was sufficient for the requirements of development and stoping, but as the sowing season approached the number of blacks gradually fell off, until in October "there were as few boys as at any time since milling began." Consequently, as the readers of the Review learnt from these columns a short time ago, the mill was shut down on November 9. "It is most important," urge the directors, "that the Globe and Phœnix Reef should be further rapidly opened up. The latest reports show much improvement in the fourth level drive, and it is hoped that the third level parallel, which has just been reached by the long cross-cut from the main reef, will add considerably to the average values. The Phœnix mine drive continues to open up good ore." It appears the directors deferred for some time the consideration of the question of paying an interim dividend in the hope that the efforts of the management to secure enough labour to continue milling operations would be successful, but as the prospects are so doubtful they consider it inadvisable to distribute any of the past profits. Their sentiments on the question of getting Chinese labour, to save the industry from extinction, or from some awful disaster, or, at any rate, some destiny of a terrible description, are expressed in the following direct and simple words:—"The serious effect on the economy of working a mine with intermittent production due to insufficient labour is now fully experienced by this company. The pressing need for the immediate importation of Asiatic indentured unskilled labourers to meet the requirements of the mining industry is now generally acknowledged in Rhodesia, and resolutions were recently passed by the various representative bodies of the country in favour of importation. The decision of the Colonial Secretary is now awaited." Hurry up gentle and sweet Mr. Lyttelton.

Rhodesia-Selukwe Development Syndicate.—This syndicate purchased a number of properties from the Buluwayo Consolidated Gold Fields, Limited, the vendors taking 106,463 fully

paid shares, and it is interesting to note that two of the directorial-vendors are two of the directorial-buyers. From the annual report for the financial year to June 30 we learn that no further work has been done on the mining claims, for what reason is not stated. With regard to an option entered into on joint account with the Rhodesia Exploration and Development Company for developing the "D Troop" claims, the work done was not sufficiently encouraging to allow of the option being exercised, the expenditure, amounting to £879, being written off. In view of the heavy annual payments to be made for inspection fees on other claims, the directors have decided to allow all but 130 of them to be forfeited. The syndicate has participated in the purchase of the entire share capital of a company owning a concession for the supply of public and private electric lighting at Lourenco Marques, and has also acquired an interest in a syndicate holding options on various coal and diamond farms in the Transvaal and Orange River Colony. In the twelve months money poured into the company's exchequer—in shillings, 35 coming from "sundry" sources and seven of them from transfer fees. The directors, however, went on spending, until they had parted with the sum of £2,341, so the balance of £2,339 increases the old one to £4,432, quite a respectable looking loss. The company does not owe much, and on the other hand the little cash it possesses will soon disappear at the old rate of expenditure.

Crescens (Matabele) Mines and Land Company.—A tale of disappointment is unfolded in the report of the directors of this Rhodesian Company for the year to July 31, and it is not easy to see how Chinese or any other labour can help it much, for no human being can make reefs where none exist. There was no revenue from gold mining, only £1,326 from interest and dividends, £980 from rents, and £308 from the sale of timber, a loss of £4,001 being the result, no provision being allowed for depreciation on investments. These consist of a large number of shares in various other Rhodesian companies, most of them in a very poor way, as we have shown recently in these columns. All are valued at cost at a round £25,200, the auditor reporting that at the date of the balance-sheet they show a considerable depreciation. Since then they must have fallen to lower levels. Cash, however, covers the current liabilities several times over. The above loss is deducted from the previous credit of £8,422, leaving a balance of £4,421. This company is interested, directly and indirectly, in some 385 claims, in 62 farms in Matabeleland and half a dozen stands. Development work has been carried out on two of the principal claims, called, respectively, the Veracity and the Mystery. With respect to the former the consulting engineer reports that the general result is "the large body of payable ore existent on the first level is not permanent in depth, but becomes impoverished and attenuated before reaching the third level." Instructions have been given to let the mine, if possible, on tribute, by which means it is anticipated a net increase of £12,000 will accrue to the company. The Mystery claims have been inspected by Mr. C. E. Parsons in order to see whether, by further development, the existence of a payable reef could be discovered. He reports that the work done in the past did not give encouraging results. Out of the nine places tested fair results were obtained from only two, the rest were disappointing. He advises a thorough re-sampling of the property before recommending further developments.

General Trust and Finance Association.—The report and accounts cover the period from the incorporation of this company, July 8, 1902, to September 30 last. Assets consist of a land holding at Delagoa Bay; three-sixteenths of the share capital of the Compagnie Generale d'Electricite de Lorenco Marques; options on farms in the Transvaal and Orange River Colony, with an agency business in Johannesburg. Interest on loans and deposits brought in £528, agency fees £980, rents £150, with a few pounds from transfer fees and other sources. The result is a loss of £1,822. At this rate the company will soon exhaust its moderate excess of assets over its liabilities.

South African Territories.—Shareholders are not likely to read the report of their directors for the past twelve months with any unusual delight, for little can be said regarding the past, and even less respecting the future." Owing to the outbreak of the Bondelzwart Hottentots, which occurred last October, at Warmbad," says the report, "where the company's African headquarters are situated, the usual advices and accounts have not been forthcoming, and the balance-sheet includes the African accounts only down to March 31, 1903. The directors greatly regret that they have not yet been able to obtain authentic information as to the safety of the company's employees and property." Happily there as attached to the report a slip of paper on which is printed, in red ink, a cable bearing the joyous news:—"Warmbad and property safe." The capitalised expenditure amounted to £4,871, against an income of £1,275 from interest, transfer fees, and rents. Considering the present undeveloped condition of the properties the company's financial position is not over strong.

Gold Coast Development Syndicate.—"The extreme depression which has characterised the West African market during the period under review has operated most adversely in regard to the introduction of capital for the working of new concessions, and there seems to be for the present a disposition to await results from some of the properties now in the course of active development before taking up fresh enterprises." So say the directors of this Jungle company in their report for the past year, consequently they have sold no more concessions, though two are still under option of purchase. Revenue consisted of £282 from dividends on investments, £414 profit on the sale of 700 Broomassie shares, and £10 from transfer fees, the loss on the year being £79. Some Consols were also sold at a loss of £42. This increases the debit to £1,349. The company has only £280 in cash and sundry marketable investments valued at £8,563, £124 covering the liabilities.

Fanti Corporation.—The report and accounts of this Jungle company cover the twelve months to the end of March. No profit and loss account is issued. Assets consist principally of large shareholdings in other Jungle companies, and in reference to these the directors say:—"A large amount of development work has been done on many of the properties is which the Corporation is interested, and as such development work has proved to be eminently satisfactory, the intrinsic values of the Corporation's investments have materially increased." Expenditure totalled £3,771, and receipts from interest, transfer fees, etc., amounted to £3,809. Contango loans stand at £46,804, debtors at £7,950, with cash amounting to £10,510, against slight liabilities. Shares in other companies are valued at £320,208, in respect to which the auditors say that, based on market prices at March 31, and without taking into account the shares not quoted, their value was in excess of the balance-sheet figure, but considerable depreciation has taken place since.

Akrokerri (Ashanti) Mines.—The directors of this Jungle company are not in a position to say much in their report for the year ending June 30, but shareholders are given sufficient information to convince them that profits and dividends are still a long way off. Development work is being carried on in one or two levels, and the consulting engineer certifies that the reserve of ore developed in the southern section of the Akrokerri mine is sufficient to justify the immediate erection of a milling plant. So a 20-stamp mill is to be put up, and it is anticipated that crushing will commence in October, 1904. Even should nothing happen to upset these anticipations, it is quite possible that the company may have to crush two or three years before available profits can be earned on an issued capital of £225,000. Last year the expenditure in West Africa was £7,542, and in London £3,975, after deducting £283 from interest, discounts, and registration fees. At present cash amply covers liabilities.

Attasi Mines.—The balance-sheet issued by this Jungle company covers the three years from the date of its incorporation to May 31. As recently as June 5 the capital was increased by 25,000 new shares, and £75,000 first mortgage debentures (part of £100,000) were also offered to the shareholders. It is the intention of the directors to purchase out of these funds a 30-stamp mill, with cyanide and slimes plant, the quartz already developed being sufficient, it is said, to supply such a battery for two years. Only a few pounds are coming in from interest, discount, etc., but the issue of the above shares and debentures since the close of the company's financial year must have appreciably strengthened its cash resources, not before it was needed.

Ashanti Lands.—This West African company's assets consist principally of holdings in various other Jungle concerns, such as the Attasi Mines, Akrokerri (Ashanti) Mines, the Bipposu Mines, and in the Ocoomadeesa and Boabeedroo Concessions. During the twelve months to the end of June the income from interest, commission, registration fees, etc., came to £4,807, but outgo exceeded this by £1,180. This has to be added to the previous debit of £30,318, making £31,499. "A valuation on the basis of to-day's market prices of such of the fully-paid shares as are quoted on the Stock Exchange," say the directors, "and placing no valuation on the shares which are not quoted, would represent a further asset of £106,129, but following out the principle which your directors have adopted up to the present time, no valuation will be placed upon any of these holdings until such time as they are realised or become dividend-paying." The shares are valued at cost at £49,261. Very little is owing by the company, and it has a plentitude of cash, etc.

Abosso Gold Mining Company.—Development work is still being carried out on the property of this company, the total footage of levels, cross-cuts and winzes now exceeding 3,600 ft. In view of the progress recently made, the directors consider the time has now arrived when the preliminary arrangements for sending out crushing plant should be entered into. Last year's report said sufficient ore should by this time have been made available to supply a thirty-stamp mill, but unforeseen obstructions have made this impossible. No profit and loss account is issued. Last year dividends and interest yielded £987, and a profit of £272 was made on the realisation of Government securities, but the expenditure topped this by £9,659. The company is still well off for available resources.

Taquah and Abosso Gold Mining Company.—Work during the twelve months ending June 30 consisted mainly in sinking the shaft, and equipping it, laying down branch tramways to facilitate the transport of goods and fuel, and other matters of detail. The managing director reports that the progress of the development was satisfactory, "considering the large amount of construction work in connection with the new equipment," but in consequence of the unexpected disturbed grounds in No. 2 and 3 levels the quantity of ore developed has not met expectations. "We are informed," say the auditors, "that the operations of the company are not sufficiently advanced to permit of a profit and loss account being prepared." Proceeds of town allotments and copper plates sold, and native town and ground rents accrued to date amounted to £4,536, and dividends and interest brought in an additional £3,866, the expenditure topping this by £4,414. The balance-sheet exhibits a strong financial position.

Ankobra (Taquah and Abosso) Development Syndicate—This is a subsidiary of the Taquah and Abosso Gold Mining Compani, and, like its parent, it issues no profit and loss account for the year to June 30. Dredging machinery was erected in October, on November 4 trials of the new machinery were commenced, and

137 oz. of gold have since been remitted to England. The directors intend to purchase another dredger. New terms have been arranged with the parent company, whereby the whole river is leased to the syndicate, on the latter undertaking to pay to the parent 25 per cent. of the net profits derived from the working and to allot it a further 5,000 fully-paid shares. The Taquah company is also to have the right to subscribe at par for 25 per cent. of any issue of shares that may be made over the present authorised capital of £100,000. Beyond the necessary survey work nothing has been done on the mining concessions in which the syndicate is interested. Expenditure in West Africa totalled £4,842, and that in London £1,707, against a revenue of £390 from interest on loans. The company is still well to do for cash and other resources.

Mantraim (Wassau).—We learn from the report of this Jungle company, to June 30, that 120,000 shares were allotted as fully-paid to the vendors, the Sekondi and Tarkwa Co., Limited, and on the remaining 100,000 shares 17s. 6d. per share had been called up at the end of the financial year. The final call of 2s. 6d. per share was made last July. In the last report it was stated that a certificate of validity for the whole of the property had been granted by the Concessions Court. The directors were under the impression that such certificate gave an indefeasible title to the property, but in this it appears they were mistaken, for the company owning the property adjoining the Mantraim concession entered a claim to a portion of it, and obtained leave to bring an action of ejectment against the company. This decision was appealed against, but the appeal was dismissed. Instead, therefore, of going to the expense of further defending the case, it was deemed politic to compromise, and this was eventually done by the Sekondi and Tarkwa Company, agreeing to hand over to the plaintiff company 20,000 of the vendors' shares, upon the condition that all claim to the property was withdrawn. In consideration of this the Mantraim directors agreed to give to the vendor company the option on 40,000 of the unissued shares at par, the option to be for a period of two years from the date on which regular crushing commences. The crushing and cyanide plant erection is now completed, and a cable was received on December 9 stating there had been an experimental run. Revenue totalled the trifle of £23 from transfer fees, the London expenditure absorbing £4,133. Against an overdraft of £3,571 and £3,100 owing to sundry creditors, cash and debtors amount to less than £900. Additional funds being required, the directors have decided to make a debenture issue of £20,000, half of which is to be offered to the shareholders immediately.

New Chaffers Extended.—As this concern has failed in its efforts to find a suitable property in Western Australia, it has acquired some lead works in the county of Somerset. Its area is nearly 1,000 acres, and it is said to contain "lead dumps of great magnitude." The price of the works, mill, machinery, and buildings and the freehold and leasehold properties is £57,000, of which the vendors require payment of £12,000 in cash and the remainder in shares. As, however, the funds at the disposal of the directors are not sufficient to enable them to complete the purchase and work the property in the manner advised by the expert, they propose that the present company shall sell the whole of its assets and undertaking, with certain exceptions, but including the right to acquire the lead works, to a new company, and that the purchase price shall be the allotment to the vendor company of sufficient shares of 5s. each, credited with 4s. paid, to enable each shareholder in the New Chaffers to receive one share for every share he holds.

Mill's Day Dawn United Gold Mines.—During the six months to October 21 the revenue from gold, rent, etc., was only £3,316, and as the expenditure amounted to £7,697, the loss was £4,381. The work carried out during the half year was principally of a development and exploratory character, the results of which, however, do not seem to be very promising. Ten heads of stamps are at present employed, and if the stopes over No. 12 intermediate levels yield satisfactorily in the trial crushings, there is a possibility, say the directors, of this stamp power being more continuously employed. They especially draw attention to the continuance of the No. 8 east level. To quote from the report, "this level is exploring virgin ground to the eastward of the dyke, and as it has upwards of 500 ft. still to go to the eastern boundary, the discovery of a payable reef would give value to a very large area of the company's lease which has hitherto been regarded as comparatively worthless. The neighbouring companies—the Day Dawn Block and Wyndham and the Day Dawn Freehold Consolidated—are prospecting the western portions of their leases, to the north-westward of our No. 10 level, and any satisfactory development in that section must improve the prospective value of a large area of our ground. The direction and scope of future operations will be largely determined by the result of the trial crushings from the various parts of the mines, and it is, therefore, impossible to accurately forecast the work and output for the ensuing term further than has been atempted." The inference assuredly is, the future is very uncertain.

Town Properties of Western Australia.—Last year, to the end of July, this company's revenue from land, buildings, land sales, interest, transfer fees, etc., amounted to £19,871, which gave a net profit of £4,814, after allowing for expenditure, depreciation, income-tax, etc. As £6,406 was brought in, there is an available balance of £11,220, out of which £4,000 is put to reserve, £5,625 appropriated to pay a dividend of 9d. per share, and £1,595 is carried forward. On the goldfields properties the directors have written off as lost, the £2,000 placed to reserve in last year's accounts, together with £5,163 this year. A good balance-sheet is published, the company being in a comfortable financial position.

Capillitas Copper Company.—A first annual report is issued by the company to the end of June. Development and working expenditure at the mines totalled £13,388, against a revenue of £3,472 from the sale of ore and products. London expenses absorbed £6,185, the receipts aggregating £1,741 from interest and transfer fees. Cash in hand totals £9,713 against £1,206 owing to sundry creditors. The general manager reports that no estimate can be made of ore reserves in the mine, as another year's development is required in opening up fresh ground.

Ashanti Company.—"The work on the various properties in which the company is interested has made good progress during the past year, and the directors are pleased to be able to state that during the ensuing year it is expected that one, and probably two of the mines in which the company is interested will become dividend-paying," is the message conveyed in the report for the year ending June 30. Meanwhile losses are accumulating, a further £3,616 being now added to the old debit of £30,545, making £34,161. Assets easily cover the floating liabilities.

TRADE AND PRODUCE.

Wheat.—The last few days have not been productive of any change or excitement, and the markets are exactly as they were at the end of last week—thinly attended and without animation. Farmers' deliveries for the week were 53,397 qrs., averaging 26s. 9d. against 58,180 qrs. the week before, averaging 26s. 7d. Prices have kept very firm, English wheat easier for a while, but strengthening again, and foreign occasionally selling at a slight advance. The quantities of wheat and flour on passage to the United Kingdom during last week show a slight increase over the week before, being 1,890,000 qrs., against 1,820,000, and the imports from abroad were 403,898 qrs., making a total for the season of sixteen weeks of 6,997,643 qrs., against 6,486,712 last season. American markets had rather a bullish tone at first, but became weak later with a general disinclination to buy before the holidays. Bradstreet's estimate of the quantites in sight east of the Rockies was 59,634,000 bushels, against 10,136,000 last week, and 81,894,000 a year ago.

Wool.—General trade remains very dull, and there is no doubt that such depression has not existed for years. Most branches are suffering from the pinch, and at this moment only in the large centres for raw materials, Bradford and Leicester, can any business be said to be going on. Here a decided improvement has appeared, prices of foreign and English wools are hardening again, and a good deal of export has been done at advanced rates. Spinners also are negotiating for January deliveries, but find it difficult to obtain contracts at their present rates.

Linen.—Most of the markets are slack just before Christmas, but in linen more activity has been shown lately than for some time. Prices have gone up rapidly during the past week or two, the record price of the season for Irish flax was reached at a sale last week when 76s. per cent. was obtained for one lot. In yarns also an all-round advance has been made here, and abroad the Belgian spinners have again advanced their lists. Yet in spite of prohibitive prices buying has been heavy. Manufacturers at last, convinced to wait longer will cost them dearer, are replenishing their stock, and in their turn advancing their quotations. Business in finished goods cannot increase much before the New Year, except the buying done for Christmas account, but any little change that has taken place is for the better. Exports also show a more hopeful tendency, and the outlook generally is brighter.

Cotton.—For the past few days there has been little done in spot on the Liverpool market, and prices have shown but little variation. Futures, on the other hand, have been feverish, and at one time middling American was steady at 7.14d., or fourteen points above the close last Friday. This level, however, was not maintained for long, and in spite of a large number of American buying orders, quotations slipped gradually back until they were a few points below 7d. The answers received by the Master Spinners' Federation from the Continent and the States are generally unfavourable to the suggested plan of universal short time, and Lancashire must therefore solve the difficulty as best she can by herself.

In the States futures continue feverish, and have risen considerably since the end of last week, in spite of sales to realise, and the disturbing influence of the Far East crisis. But the impression that the price has been forced up too high is steadily gaining ground, and the bears have determined to raid the market whenever they see an opportunity. Once quotations show a material fall, selling orders from the public, they assert, will come out, and send prices still lower. Therefore every time the bulls stand from under the market the bears hammer away at it, though so far they have not succeeded in making much impression. On the contrary, futures were rushed up on Tuesday by 40 to 55 points, and the excitement prevailing in the "pit" was as great as it has been on any day this year.

Liverpool yesterday followed America's lead, and though the business done in spot was very limited, prices were advanced 18 points, middling America closing at 7.24d., and M.F. at 7.50d. Egyptians were also quiet, but 3-16 higher on the day at 7¾d. fair and 8 13-16d. F.G. fair. Futures were feverish in the morning, but closed steady, with Dec. at 7.14d., Dec.-Jan. 7.10d., Jan.-Feb. 7.7d., Feb.-March 7.5d. to 7.6d., March-April 7.4d., and April-May at 7.3d.

Copper.—Very little business has been done since last week, buyers and sellers being equally lazy, but the market has kept

firm, and prices without much change. Last night the tone was steady, cash being quoted at £56 12s. 6d., and three months at £56 5s. The week's shipments from the Atlantic seaboard were heavier than usual, amounting to 4,203 tons.

Tin.—Eastern advices and good buying in the market there again had an exciting influence over here, and prices on Monday went up to £130 5s. for three months. After that they fluctuated a good deal, and trade became much quieter, the market last night closing with cash at £128 7s. 6d., and three months at £129 10s.

Iron and Steel.—The approaching holidays have put an end to business on all the markets, as there is little or no chance of a rise in prices taking place until they are past. In the north of England, though consumers show no disposition to buy, the inquiry for Cleveland iron to be delivered in the first half of the year, still continues good, but this is about the only satisfactory feature to report from any quarter. At Glasgow the finished iron and steel trades are quiet, and the outlook holds out, but scanty prospects of an improvement with the New Year. Much the same state of affairs prevails at Barrow, and the holidays both there and in Scotland are likely to be extended beyond the usual period.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

The North of Scotland Canadian Mortgage Company.

An excellent report is issued by this prosperous company for the year ending November 11 last. The directors are able to pay the usual 10 per cent. dividend tax free, and to carry forward £12,119 against £7,094 brought in. The net profits slightly exceeded £20,000. What may be called working expenses took £12,874, and interest and expenses on loans absorb £22,712, so that the total outgo was £35,586, against a gross income of £55,612. Everything appears to be clean in the balance-sheet, although we notice that "interest accrued" is included in the income as well as interest collected. The company does a large business, and has no less than £770,691 lent on real estate mortgages in Canada, its entire assets footing up to £874,053, of which £35,708 represents interest "accrued" on mortgages, etc., that is to say, money not in hand at the date of the balance-sheet. The company, however, is so carefully managed that it seems to be in no danger through treating its income in this fashion. Interest has been well met, the directors say, and they also add they have found no difficulty in re-issuing the debentures maturing. Altogether the paid-up capital is £150,000, and the money due on debentures is about £600,000. There is also a reserve fund of £100 000, to which nothing has been added out of the past year's profits, but it is doubtless ample in a business so prudently conducted.

New Zealand and River Plate Land Mortgage.

This undertaking marked time during the twelve months ended October 31, the total income being a mere £203 higher at £51,434, compared with the preceding year. Balance brought forward was slightly better at £1,116, making £52,550, and after paying interest and general charges, taxes, commission, etc., the net balance is £36,283. Shareholders have already received a dividend of 3½ per cent., and the directors now propose a further payment at the same rate, making 7 per cent. in all, or 1 per cent. more, with £14,468 to reserve and £815 carried forward. Reserve also receives £2,531, premium on new shares issued within the year, making it £190,000, and without doubt the position is satisfactory. Loans on mortgage in the River Plate have been a good deal reduced from last year's rather high total, and now stand at £487,782, while the properties taken over at River Plate, foreclosures that is, continue unimportant at £6,688. A big increase of £66,449 to £82,193 in the cash balances is to be noted, and also that the company possesses tip-top investments amounting to £81,315. Bills receivable come to just £20,000, and floating liabilities as usual are trifling. A further reduction from £11,609 to £5,678 has occurred in the investments in New Zealand, and the praiseworthy aim of the directors is apparently to reduce the company's interests in that Colony at every opportunity. Practically all the company's debentures have now come under the supplemental trust deed of November 22, 1899, and the directors are in a position to proceed with the cancellation of the £4 per share liability on the £5 shares. A resolution to that effect will be submitted at the forthcoming meeting, and when it has been confirmed an application will be made to the Court to allow the reduction to take place.

Consolidated Kent Collieries Corporation, Limited.

A good deal of money must still be provided for this undertaking before coal mining can commence, and even then shareholders must not become too sanguine of what the future may have in store, but there can be no doubt that the men in whose hands the destinies of the concern now rest are making a determined effort to bring the enterprise to a successful issue. We gave a good many details of the progress of operations in a recent issue, and do not now need to publish many extracts from the annual report made up to September 30 just issued. It may, however, be remarked that the Kind-Chaudron machinery has been in active operation for the past six months, and that the No. 2 pit has been continued from the 1,095 ft. level, with a 9 ft. diameter, to a depth slightly over 1,206 ft., and is now being enlarged with the Grey Trepan to a diameter of 18 ft. A few weeks' work will complete the sinking of this Trepan, and the directors say they will then commence operations for the insertion of the tubbing in the pit. The successful carrying out of this will leave only about 90 ft. of dry sinking to reach the first workable seam of coal. Operations have been accomplished at what must be considered the very reasonable expenditure of £16,833, leaving out the cost of machinery, that is to say, £15,000 less than was spent during the previous eleven months. Outlay on machinery and plant, however, was £26,452, bringing the total expenses to £42,935, and the concern is quite at the end of its resources. Requirements have been considerably accentuated in consequence of the default by some holders of large blocks of shares. In March last tenders were invited for these shares and 30,000 were sold, and later arrangements were made by which a further 40,000 have been sold without loss to the corporation; but there are still 118,000 in hand which must be taken up, as well as some further debentures to meet immediate necessities, and the directors invite the views of shareholders on the matter. The need for money is exceedingly pressing, only £1,313 being held in cash, besides deposits including deposit in Court of £2,140. Floating liabilities are not overwhelming, but quite important enough at £24,897 and of course debenture and loan interest for the year is still owing. Even when the company is revenue earning there are many important items in the balance-sheet at present counted as assets which must be cleared away before anything can accrue to the shareholders, and their capital is terribly heavy at £1,351,000. There are also debentures outstanding of £87,779, and loans of £11,000, and at best the company will have a hard fight to keep itself going. All matters in connection with the liquidation of the vendor companies have not yet been arranged, but a complete settlement is looked for shortly.

E. Rich and Co., Limited.

A year ago this company's report was carefully and successfully kept out of our hands owing no doubt to the miserable story it revealed, and before dealing with that for the twelve months ended September 30 last it may be as well to state briefly the figures for the earlier period. Trading then resulted in a loss of £1,097, and this was further increased by £2,854 charged for managing director's remuneration, directors' fees, etc., so that, after allowing for £218 received as dividends on investments, there was a loss of £3,733, which, however, was reduced to £1,097 by the deduction of the balance brought forward. Last year's business was a little more remunerative, but still very far from satisfactory considering the capital involved, and the heavy stocks the company seems obliged to carry. A gross profit of £3,554 was earned, and with £118, or £100 less, from dividends on shares and debentures in other companies, gave a total of £3,673, out of which administration expenses and other charges took £2,474, leaving a balance of £1,198, or £101 more than the sum required to wipe out the debit brought in. Such a result cannot be described as encouraging, and the directors, inferentially, at any rate, ascribe their lack of success to the effects of the drought, as they state that this gradually diminished in intensity, and the last two months practically saw the end of it, so that prospects have improved. There is much need of comfort as although stocks have been substantially reduced by £29,587, enabling the overdraft of £27,606 to be wiped out, the item is still, at £110,015, excessive for a company which cannot earn more than £3,500. A welcome reduction of £14,637 to £37,570 has been made in the amount due to sundry creditors, and at the same time sundry debtors are down by £15,400 to £65,423, while cash shows an increase of £3,639 and bills receivable are £3,614 up at £5,759 and £7,459 respectively.

The Lingham Timber and Trading Co., Limited.

In January, 1902, this company took over the business of the Lingham Timber and Trading Co., Limited (Transvaal Company), and now issues a statement of accounts covering the period from April 28, 1902 (the date of incorporation of the present company), to June 30 last. Profit on trading is returned at £48,322, and £16 came from transfer fees, making a total of £48,335. Management charges and directors' fees absorbed £7,500, and half the preliminary expenses are extinguished, leaving the net balance at £39,593, subject to additional remuneration to directors. The company's business largely consists of supplying materials of various kinds to the mines, and the directors say that apart from the difficulties arising from the shortage of railway trucks from Matolla (the property at Delagoa Bay) to Johannesburg, the existing depression from the shortage of native labour has no doubt materially affected the business. When the labour question has been solved a considerably increased trade is confidently anticipated. The mentioned Matolla property cost the company £100,000, but it has a water frontage of 5/8ths of a mile, and is considered the premier position as a timber yard and landing place. An extension of the pier and improvement of the land accommodation will enable the largest ships to come alongside, and one of the leading steamship lines has approached the company with a view of adopting Matolla as its discharging port. Part of the property has been sold to the North American and African Cold Storage Company for 10,000 fully-paid shares, and interests are also possessed in the Atlantic and South African Steamship Company, the Lourenco Marques Milling Syndicate, and the Waterburg Lands and Timber Company. Turning to the balance-sheet we find that the nominal

apital of the concern is £400,000 in 399,900 ordinary and 100 eferred shares of £1 each, the whole of the latter and 259,900 of ie former having been issued. Creditors altogether amount to he big sum of £276,052, but £59,405 consists of liabilities taken ver from the old company, and a portion of the bills payable, £140,598, re.ates to steamers purchased on behalf of the Atlantic nd South African Steamship Company. Up to the present £135,342 has been expended on account of this undertaking, and would be well perhaps to make some mention of its exact relaionship with the Lingham Company. Stock stands at £147,456, nd shares in other companies at £21,962, and part of these ssets have been mortgaged to creditors. Debtors, almost ntirely in South Africa, amount to £84,211, but cash and bills eceivable are very trifling at £1,915. Properties and plant are alued at £169,426 and goodwill at £16,689. No division of the rofits is recommended in the report.

Schibaieff Petroleum Company.

A wonderful change has come over the condition of the Russian il market during recent months, and shareholders in the various Baku companies who have stuck to their holdings through all the epression seem likely to be rewarded. The accounts of this oncern for the year ended November 30 are now being prepared, nd as the resumption by the company of its own distributing usiness has entailed considerable initial expenditure, the direcors defer any statement as to dividends until the audited figures re before them. It may, however, be stated that the production f crude oil has amounted to 16,093,179 poods against 16,786,241 oods in the preceding year, a decline that matters little, because ince June crude oil has risen from 7½ copecs per pood to 15 to 16 opecs, kerosene now stands at 32 to 34 copecs, against 11 copecs, nd residuum has advanced to 12 to 13 copecs. The directors hink that the growing demand for Russian oil in the markets of he world has caused the improvement, and there is little doubt hat, where possible, consumers are substituting European products or those of Rockefeller's gigantic oil trust, which is all to the good. Concerning the distributing business already mentioned the conract with the Mazout Company was terminated by this concern t the end of the last financial year, and since then the work f distributing the various products of the company's refinery has een vigorously pushed. The company is regaining the position n the interior markets previously held. Satisfactory working is reported in connection with the fleet of oil carrying craft purhased to permit the company to better carry on its Russian busiess.

The Provincial Tramways Co., Limited.

The various tramway undertakings controlled by this company earned a net revenue of £23,354 in the twelve months to Septemer 30, or £4,802 more than in the previous year, an increase which may be considered satisfactory, considering the very unfavourable summer. From the net income £6,000 is allowed for epreciation at Plymouth and Grimsby, and after adding £1,257 rought forward, and other revenue, the total available is £18,795. Administration charges and income-tax drew away £2,578, and preference dividend £6 000, and from the balance the directors pay wo dividends of 3s. each on the ordinary shares, making 3 per ent. in all, with an increase in the carry forward to £2,743. The directors report a satisfactory revenue from the Plymouth and Grimsby concerns, and in reference to Cardiff, say that an amicable settlement has been arrived at with the Corporation in the matter of the depots, thereby avoiding the very heavy expenses of arbitration. The Portsdown and Horndean undertaking was opened in the spring, and has been working satisfactorily, although naturally the adverse weather conditions proved detrimental to traffic. As might have been expected, the company's bill for an electric tramway from Gosport to Fareham, Porchester, and Cosham was strenuously opposed by the South Western Railway, but Parliament authorised a line to Fareham, striking out the portion from that place to Cosham. In the spring the directors will consider how best to carry out the undertaking. The directors ask shareholders to authorise a payment of £500 to Mr. J. Barber Glenn "in recognition of the special services he has rendered the company."

Arc Lamps, Limited.

The second report of this little company, which deals in certain patents of a Mr. W. J. Davy, covers the year to July 31 and shows that good progress has been made in developing the business. Gross profits amounted to £5,835, compared with £3,989 in the previous twelve months, and, after meeting all expenses of management and providing £350 for depreciation of plant and machinery, there was a balance of £2,630. To this was added £1,722 brought forward, making a total of £4,352, out of which dividends amounting to 6 per cent. for the year have been paid. The directors state that Mr. Davy has, as the result of further discoveries, again added to the patents held, which is probably the reason that nothing has been written off this item in the balance-sheet, and they further announce that the action brought against them by the Jandus Arc Lamp and Electric Light Co., Limited, for alleged infringement of patents, after being delayed by the plaintiffs as long as possible, has now been further postponed for the purpose of amending their patents by the Judge, who imposed certain conditions in this company's favour.

Investors' Mortgage Security Co., Limited.

In spite of a substantial increase in this company's investments the income for the twelve months ended September 30 fell off by £1,294 to £31,228, and with a slightly larger balance brought in and receipts from transfer fees, the total revenue was still £1,232 lower at £33,609. A reduction however of £416 to £9,327 was made in interest requirements, and income-tax took only £573, or £412 less, and the amount available was consequently £19,704 or £402 smaller, so that the directors were able again to pay 6 per cent. on the ordinary and "A" shares, and after transferring £3,000 to reserve, and £1,553 to the contingent fund against £5,000 added to the first-named a year ago, £2,400 was carried forward. The position as disclosed by the balance-sheet is not altogether satisfactory, and it is surely time the directors abandoned the policy of confining their annual report to a mere formal statement of the proposed distribution of profits earned. For one thing fuller details ought to be given of the investments which are valued at £531,995, or £5,000 more, after deduction of the contingent fund. Interest accrued is taken into the accounts at £15,639 against £16,187, cash has fallen from £9,978 to £4,636, and on the other hand a decrease of £2,710 in the debenture debt to £238,495, is partly offset by an increase of £1,055 to £2,097 in the sum due to sundry creditors.

The North Queensland Mortgage and Investment Co., Limited.

There is clearly no limit to the misfortunes of Colonial mortgage companies. No sooner does the prolonged and heartbreaking drought come to an end than something else crops up to make everyone unhappy, and the directors of this concern have the doleful intelligence to convey that the break up of the drought was preceded by a very severe cyclone, which passed over Townsville, and did considerable damage to properties in which the concern is interested. To provide for the consequent losses it has been necessary to withdraw £2,000 from the past year's revenue, reducing it to £7,828, and after providing all interest charges, together with general expenses in London and Queensland, etc., the net balance on operations is just £64 against £1,565 in the previous twelve months. To it is added £2,652 brought forward, making £2,716, from which the directors propose to place £2,000 to reserve, making it £13,000, and to carry forward £716. On September 30 last the company had £160,077 lent on real estate mortgages, or £8,382 more than at the same date in 1902, while loans on stock and stations were £24,197, against £23,646. Foreclosed properties unfortunately show a small advance to £17,629, and including these the total investments in the State amount to £201,903, against £192,707. Part of the reserve is held in good class stocks, and the company also possesses £6,228 of its own debenture stock, but we note that interest accrued on loans and interest in arrear in Queensland is carried as an asset to the extent of £2,851.

MINING RETURNS.

British Exploration of Australasia.—Lalla Rookh Mine: 163 tons, 172 oz.

Brookfield Mining (Nova Scotia).—700 tons ore, 400 oz.

Camp Bird.—Crushed 6,223 tons of ore (dry weight), 8,143 oz.; 390 tons of concentrates.

Central Chili Copper.—Regulus 396 tons.

Chinese Engineering.—Output of coal, 15,000 tons; sales, 17,000 tons; consumption, 1,300 tons.

Eaglehawk Consolidated.—800 tons crushed, 376 oz.; 100 oz. cyanide; copper plates, 206 oz.

Fremantle Smelter.—Shipped 103 tons lead, bullion 2,800 oz. gold and 7,000 oz. silver.

Gibraltar Consolidated.—140 tons of ore, 288 oz.; 10 tons concentrates, 84 oz.; tailings, 26 oz.; total, 398 oz.; New Mines: 18 tons of ore. One ton concentrates, 3 oz.; total 46 oz.

Golden Blocks (Taitapu).—Crushed 93 tons, 148 oz.

Malacca Diamond.—102 loads washed, producing 200 carats diamonds and 1,600 lb. tin.

Ouro Preto Gold of Brazil.—5,853 tons, 1,935 oz.

Pahang.—2,230 tons of stone crushed, producing 42 tons of black tin.

Pahang Kabang.—700 tons of stone crushed, producing 14 tons of black tin.

Queen Cross Reef.—2,532 tons, 7,279 oz.

South Oriental and Glanmire Gold.—568 tons, 1,173 oz.

Victoria Proprietary (1903).—372 oz., 480 tons crushed.

British Columbia Electric Railway Co., Limited.

When this company acted as sponsor for the Vancouver Power Co., Limited, which was formed for the purpose of developing and supplying electrical energy to the cities of Vancouver and New Westminster and the surrounding districts, it issued £220,000 of 4½ per cent. Vancouver Power debentures as purchase consideration for the entire share capital of that undertaking. As funds were required for the construction work, the subsidiary in its turn issued £175,000 of these debentures to the public, and Messrs. Spirling and Co. now offer the remaining £45,000 to the existing stock and debenture holders of the railway company for subscription at par. Both the railway and electric lighting businesses are making steady progress, and the net revenue of the former for the year ended June 30, before providing for renewals and maintenance, came to £55,208, of which administration expenses and interest and charges on the railway company's own debentures absorbed £1,693, leaving £39,769 available.

SOUTH AFRICAN MINE RETURNS.

The figures for November are disappointing, for they show a decrease, hardly to be accounted for by the one working day less compared with October. The output from the Rand itself was 272,107 oz. of fine gold, 7,706 oz. coming from the outside districts, making a total of 279,813 oz., of a value of £1,188,571, the decrease on the previous month being 4,731 oz., and £20,098.

There was a net gain in natives of 353, compared with 492, the total number employed at the end of November being 69,311. Several of the individual returns are very poor, notably that of the French Rand, whose profit fell from £2,189 to £385, accounted for, it is officially explained, by the altogether unexpected low grade in the stopes, which it is anticipated will be temporary, together with the increased mining costs, which will be reduced. The ore must have been very poor, indeed, seeing that 7,000 tons yielded only 2,430 oz. Although the Robinson company returned 298 more ounces, there was a big drop in the profit, but no explanation of this is given. In direct contrast to this is the Ferreira Deep return, whose profit increased, despite a smaller output. Also remarkable are the figures of the Geldenhuis Deep Company, whose profit advanced by £1,200, though the production fell off by 177 oz., and those of the Geldenhuis Estate. Though the latter company had five more stamps at work, there is a decrease in the yield of 106 oz., but a growth in the profit of £540. The Glen Deep and the Durban-Roodepoort Deep had five stamps less crushing, with contrary results, the former showing an all-round improvement and the latter a general shrinkage. Poor returns are those of the Nourse Deep, Jumpers Deep, and Crown Deep, but the figures of the Ferreira are excellent.

DIVIDENDS ANNOUNCED.

MINES.

Alaska Mexican Gold.—Bonus dividend of 10 cents per share, payable at the rate of 4 4-5d. per share, being 2s. for every five shares.

Angelo Gold.—Dividend of 20 per cent.

Butters Salvador.—Fifth interim dividend of 5 per cent. (1s. per share), making 50 per cent. since May, 1903.

De Beers Consolidated.—Dividend of 20 per cent. (10s. a share) on preference shares and an interim dividend of 30 per cent. (15s. a share), on deferred shares for half-year ending Dec. 31.

Driefontein Consolidated.—Dividend of 15 per cent.

Ferreira Gold.—Dividend of 112½ per cent. (22s. 6d. per share).

Queen Cross Reef Gold.—Dividend of 2s. per share and bonus of 2s. 6d. per share, payable 31st inst.

South Oriental and Glanmire Gold.—Dividend of 4d. per share, payable 24th inst.

Westralia Mount Morgans.—Interim dividend for three months ended June 30 of 7½d. per share, being at the rate of 50 per cent. per annum, payable 30th inst.

MISCELLANEOUS.

Austro-Hungarian Bank.—Dividend of 60 kronen.

Bargang Tea.—Interim dividend of 3 per cent. on ordinary shares.

John Crossley and Sons.—Dividend of 3s. 3d. per share on ordinary shares, making 4s. 9d. (or nearly 8 per cent.), for year ended Dec. 5, and carrying forward £1,095.

Land Development and Property.—Interim dividend on ordinary shares at the rate of 10 per cent. per annum for period ended Nov. 30 last.

Lankapara Tea.—Interim dividend of 2½ per cent. on ordinary shares.

Mitchells and Butlers.—Interim dividend at the rate of 7s. per share on ordinary shares for half-year ending Dec. 31.

Niger Company.—Interim dividend of 9d. per share for half-year ended June 30.

Newport Abercarn Steam Coal.—Interim dividend for half-year ended Sept. 30, at the rate of 6 per cent. per annum on ordinary shares.

North-Eastern Improved Dwellings.—Dividend of 7 per cent. for past half-year, making, with interim dividend, 6 per cent. for year.

Rajmai Tea.—Interim dividend of 5 per cent. on ordinary shares.

Ridgways.—Dividend at the rate of 11 per cent. per annum on ordinary shares, making 8 per cent. for whole year.

San Lorenzo Nitrate.—First interim dividend of 5 per cent.

Scottish American Mortgage.—Dividend at the rate of 7 per cent. per annum for half-year ended Sept. 30.

South Italian Railway.—Dividend of 12f. 50c. due January 1.

Trinidad Shipping and Trading.—Dividend on ordinary shares for six months ending Dec. 31, at the rate of 10 per cent. per annum.

Watson Woodhead and Wagstaffe.—Dividend of 4 per cent. on ordinary shares, carrying forward £1,250 to reserve fund.

Weaver and Co.—Interim dividend of 2½ per cent. on ordinary shares for six months ending Dec. 31.

Witwatersrand Township Estate and Finance.—Dividend of 20 per cent. per annum, payable 31st inst.

In place of the more commonplace "blotter" favoured by so many insurance companies, the Northern Assurance Company has issued a very useful memorandum and date tablet for 1904, in which each date has a page to itself, and ample space is provided for as large a number of notes as the ordinary business man requires.

COMPANY MEETING.

RHODESIA EXPLORATION AND DEVELOPMENT.

The ninth ordinary general meeting was held on Monday, December 21, at Winchester House, Mr. John Seear presiding.

In moving the adoption of the report, the chairman stated that great progress had been made in the development of the many properties in which the company were interested, and the results were satisfactory. During the year their capital had been increased to £225,000 by the creation of 50,000 shares of £1 each, which were offered to shareholders at a premium of £4. Of these 223,277 were taken up, making the total issued capital at the date of the balance-sheet 223,277 shares. The calls in arrear, which appeared in the balance-sheet at £30,226, had practically all been paid. The reserve fund remained as per last account. On the other side claims taken at cost comprised 1,357 claims owned exclusively and interests in a further 1,010, and 112,202 acres of land owned exclusively and interests in 225,260 acres. The whole stood at £41,689, a reduction approximately of about £5,000 from last year. This reduction was chiefly owing to the abandoning of certain claims. Various shares at cost amounted to £436,070, and showed an increase over last year of £20,000, accounted for by purchases. Loans to subsidiary companies, £93,192, showed an increase of £53,000, compared with last year's figures, but a large part of this was incurred on account of the Ayrshire Mine, which had since issued fresh capital to repay the company. Taking cash assets at £64,901, and calls in arrear at June 30 last, amounting to £30,226, they had a total of liquid resources of £95,128. The net realised profit for the year amounted to £15,597, which, added to the balance brought forward, £90,688, and the premiums received this year of £190,969, made a grand total of £297,255, out of which the final dividend for 1902 of 5 per cent. and the dividend for 1903 of 45 per cent., amounting to £93,095, had been paid, leaving a balance of £204,160. During the year the directors were faced with the fact that the Abercorn, Filabusi, and Gatling-Hill claims, upon which a large sum had been spent, were considered by the engineers as unpayable "propositions," or of such low grade as to show no profit under present conditions. In respect of these, together with one or two other interests, it was resolved to write off £100,969, leaving the balance carried forward £103,190. He was sure that this mode of dealing with such "propositions" would commend itself to the shareholders as a safe and conservative policy. The changes in the holdings of the company were clearly set out in the report. The most important was the acquisition of the 50 per cent. interest in the 135 Eureka claims in the Lomagunda district, and a further block of properties in the Victoria district. He then dealt with the numerous properties in which the company had interests, giving the latest particulars concerning them, and, summing up the company's position to date, observed that one could not but feel satisfied with the outlook from the mining point of view, which, after all, was the backbone of their business. The company well maintained their position at the head of the mining groups in Rhodesia. An interim dividend of 45 per cent. was paid in January last, and nothing would have given him more pleasure than to propose a further distribution that day, but this was impossible, owing to the bad times which had prevailed.

Dr. Hans Sauer seconded the motion.

Mr. Alfred Marks complained of the way in which the £100,000 written off as loss had been dealt with in the balance-sheet. He also asked whether "the so-called realised profit" of £15,597 was not arrived at by a book entry. He could not state exactly the nature of the book entry, but he might indicate it. A year ago the company held 57,000 Buluwayo Market shares, of which 44,000 were distributed to the shareholders, and which for the purposes of dividend were taken at 20s. each. The shares, however, must, it was said, have stood at 10s. or under in the company's books. The directors, he continued, thus gave the shareholders 10s. in these shares, and called it £1, and took credit for having made 10s. a share on 44,000 shares. With regard to the dividend of 50 per cent. which was distributed last January, he said that he could see no justification for it in the accounts, but he could see motives for declaring it. He also asked other questions on the accounts.

The chairman, in reply, stated that the accounts were drawn out in precisely the same way as on former occasions. It seemed to him that the way in which the premium upon shares was treated in statements of account, entirely depended on those who did the auditing. Quite recently three different sets of accounts had passed through his hands in which the item was treated in three different ways. Premiums could be legally used for the payment of dividends, but they had not been employed for that purpose in this company. If Mr. Marks had examined the balance-sheet for some years, he would have found that the premiums had really been used in the way in which he himself had urged that the money should be used. From the beginning of the company £100,000 had been received in premiums, and in the present balance-sheet £350,000 of this amount appeared as reserve fund, and another £100,000 was carried forward. The directors had also written off the £100,000 he had mentioned in his opening speech, to meet losses which they contended that a reserve fund or premium account was specially intended to provide for. These amounts came to £550,000 out of the £600,000 premiums received, and the balance had been used in meeting losses and depreciations which had occurred in former years. He explained and defended the manner in which the £100,000 that had been written off had been entered in the balance-sheet. Their shares in other companies appeared at their actual cost price, plus expenses. Until this year the directors had received their fees in shares, either those of the Gatling Hill or Buluwayo Market Companies, but this year they received a cash payment on the 5 per cent. cash dividend. He then put the motion, and declared it carried. He afterwards proposed the re-election of the retiring directors—Mr. T. M. Thackthwaite and the Hon. A. G. Brand, M.P.—and on the show of hands declared them re-elected by 27 to 13. Continuing, he proposed a resolution approving the interim dividend of 45 per cent. for 1902 paid in January last.

Mr. Brand seconded the motion.

Mr. Marks stated that no answer had been given to his question as to what estimate the directors had before them to justify the payment of this dividend. He had also asked a question about the realised profit of £15,597, and whether it was not a book entry in connection with the Buluwayo Market shares.

The Chairman replied that the directors' justification for paying the dividend was the balance-sheet of 1902, which showed a profit of £108,000. The Buluwayo Market shares had to figure in the books at the amount at which they were distributed to the shareholders as dividend. They figured in the books at the price they cost the company. He then put the resolution, and declared it carried by 30 to 8. The question of the re-election of the auditors—Messrs. Arthur Goddard and Co.—was then dealt with.

Mr. Marks inquired whether Mr. Goddard considered it proper to value shares held in other companies at a price above their cost, and if he had been in the habit of doing so in this company.

Mr. Goddard replied that he should not consider such a course proper, and the shares had not been so valued.

The motion was carried.

NEXT WEEK'S MEETINGS.

MONDAY, DECEMBER 28.

Nuthall.—Kingston-on-Thames, noon.

TUESDAY, DECEMBER 29.

Barnum and Bailey.—Winchester House, noon.
Claude's Ashanti Goldfields.—Winchester House, noon.
Emu Bay Railway.—Winchester House, noon.
East Rand Deep.—Salisbury House, noon.
Investors' Mortgage Security—Edinburgh, 2.30 p.m.
North-Eastern Breweries.—Sunderland, noon.
Showell's Brewery.—Birmingham, 3.30 p.m.

WEDNESDAY, DECEMBER 30.

Almargo Gold Syndicate.—16 and 17, Devonshire Square, noon.
Canada Company.—1, East India Avenue, 2 p.m.
Exploring Land and Minerals.—Salisbury House, noon.
H. E. Proprietary.—Salisbury House, noon.

THURSDAY, DECEMBER 31.

Bournemouth Imperial and Grand Hotels.—Bournemouth, 3 p.m.
Charrier and Marbut Carvings.—Cannon Street Hotel, noon.
North British Australasian.—Winchester House, noon.

Investment Inquiries.

It ought to be unnecessary to put private queries regarding new issues. These are always fully and faithfully dealt with week by week in our Critical Index. No one at a distance from markets or in doubt should ever respond to the invitation of prospectuses without consulting that Index. Had this rule been generally adhered to by the public during the past four years, it would not to-day be lamenting over the loss of many millions—gone never to return.

Questions about public securities, and on all points in company law, as well as on the position of life insurance offices and their promises, will be answered week by week in the REVIEW on the following terms and conditions:—

A fee of FIVE shillings must be remitted for each question put, provided they are questions about separate securities. Should a private letter be required, then an extra fee of FIVE shillings must be sent to cover the cost of such letter, the fee then being TEN shillings for one query only, and FIVE shillings for every subsequent one in the same letter.

Questions will be answered by quoting the numbers 1, 2, 3, and so on. The EDITOR has a rooted objection to such forms of reply as—"I think your Timbuctoo Consols will go up," or "Sell your Slowcoach and Draggem Bonds," because this kind of thing is open to all sorts of abuses. By using a fancy name each query can be kept absolutely private to the inquirer. Detached syllables of the inquirer's name, or initials reversed are best.

Correspondents should *number* the questions, keeping a copy for reference.

Inquiries should reach the office of the INVESTORS' REVIEW, Norfolk House, Norfolk Street, W.C., not later than Thursday morning if reply is required in same week's issue.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Nov. 13, $12,592; increase, $4,337. Aggregate from January 1, $553,063; increase, $36,002.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Nov. 21, Rs. 45,150; increase, Rs. 8,965. Aggregate from July 1, Rs. 7,78,214; increase, Rs. 92,678.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Nov. 21, Rs. 11,477; increase, Rs. 3,215. Aggregate from July 1, Rs. 1,95,710; increase, Rs. 59,675.

Bengal Central Railway.—Traffic receipts for week ending Nov. 28, Rs. 32,269; increase, Rs. 6,624. Aggregate from July 1, Rs. 760,828; increase, Rs. 158,743.

Canadian Northern Railway.—Traffic receipts for week ended Dec. 14, $64,600; increase, $20,500. Total, from July 1, $1,589,400; increase, $567,300.

Lucknow Bareilly Railway.—Traffic receipts for week ended Nov. 21, Rs. 17,687; decrease, Rs. 446. Aggregate from July 1, Rs. 4,19,588; decrease, Rs. 16,815.

Quebec Central Railway.—Traffic receipts for the 2nd week of December, $8,515; decrease, $79 Aggregate from January 1, $651,604; increase, $8,776.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Nov. 21, Rs. 7,269; decrease, Rs. 447. Aggregate from July 1, Rs. 2,19,327; increase, Rs. 6,974.

Salvador Railway.—Traffic receipts for week ended Dec. 19 $18,000; increase, $5,000.

White Pass and Yukon Railway.—Traffic receipts for the week ended Nov. 30 amounted to $6,896.

English.

Cleator and Workington.—Gross receipts for the week ending Dec. 12, £1,122; decrease, £76. Total receipts from July 1, £26,676; decrease, £399.

Cockermouth and Keswick Railway.—Receipts for week ending Dec. 12, £700; decrease, £89. Aggregate from July 1, £23,427; decrease, £1,084.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Dec. 12, £457; decrease £4. Aggregate from July 1, £9,673; increase, £452.

Liverpool Overhead Railway.—Traffic receipts for week ending Dec. 20, £1,589; increase, £78. Aggregate from July 1, £41,351; increase, £2,683.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Dec. 19, £522, increase £4; aggregate from July 1, £13,784, increase £338.

Belfast Street.—Traffic receipts for week ending Dec. 19, £2,389, decrease £89; aggregate from July 1, £66,259, increase £1,670.

Birmingham and Midland.—Traffic receipts for week ending Dec. 18, £774, decrease £47; aggregate from July 1, £20,696, decrease £23.

Birmingham City.—Traffic receipts for week ending Dec. 19, £5,012; decrease £22; aggregate from July 1, £128,941, increase £4,022.

Blessington and Poulaphouca.—Traffic receipts for the week ending Dec. 20, £8; increase £1; aggregate from July 1, £511, decrease £45.

Bristol Tramways and Carriage.—Traffic receipts for week ending Dec. 18, £4,425, increase £81; aggregate from July 1, £124,053, increase £5,104.

Burnley Corporation.—Traffic receipts for week ending Dec. 19, £769, increase for week £110; aggregate from July 1, £21,004, increase £3,394.

Dublin and Blessington.—Traffic receipts for week ending Dec. 20, £98; decrease £1; aggregate from July 1, £3,514, decrease £145.

Dublin and Lucan.—Traffic receipts for week ending Dec. 20, £96; increase, £10; aggregate from July 1, £3,119, increase £191.

Dublin United.—Traffic receipts for three days ending Dec. 19, £4,346; increase £48; aggregate from July 1, £125,863, increase, £8,333.

Edinburgh and District.—Traffic receipts for week ending Dec. 19, £3,947, increase £330; aggregate from January 1, £216,475, increase £21,382.

Edinburgh Street.—Traffic receipts for week ending Dec. 19, £390.

Harrow Road and Paddington.—Traffic receipts for week ending Dec. 18, £240, increase £3.

Isle of Thanet.—Traffic receipts for week ending Dec. 19, £240, increase, £7; aggregate from July 1, £22,307, decrease £984.

London General Omnibus.—Traffic receipts for week ending Dec. 19, £21,947, increase £347; aggregate from July 1, £594,678, increase £13,313.

London Road Car.—Traffic receipts for week ending Dec. 12, £7,383, decrease £72; aggregate from July 1, £191,519, decrease £661.

Rossendale Valley.—Traffic receipts for week ending Dec. 18 £157, decrease £12; aggregate from July 1, £4,444, decrease £54.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending Nov. 23 £4,845, decrease £481; aggregate from January 1, £285,026 increase £70,556.

Barcelona.—Traffic receipts for week ending Dec. 12, £2,183 increase £48, aggregate from January 1, £115,097, decrease £3,632.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Dec. 12, £324, increase £88; aggregate from January 1, £14,905 increase £7,662.

Brazilian Street.—Traffic receipts for the month of August Rs. 36,892; increase Rs. 2,241. Total receipts from August 1, 1903 Rs. 36,892, increase Rs. 2,241.

Brisbane.—Traffic receipts for the week ending November 4 £2,397, increase £27.

British Columbia Electric.—Traffic receipts for the month of September $259,666, increase $41,982. Net earnings from July 1 to September 30, $93,825, increase $22,219.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Dec. 22, £3,256, increase £206.

Buenos Ayres Grand National.—Traffic receipts for week ending Nov. 14, $49,527, increase $3,134; aggregate increase from April 1903, $49,137.

Calais.—Traffic receipts for week ending Dec. 19, £130; decrease £14; aggregate from July 1, £4,753, increase £13.

Calcutta.—Traffic receipts for week ending Dec. 19, Rs. 35,550 increase Rs. 3,462.

Carthagena and Herrerias.—Traffic receipts for the month of November, £2,555, decrease £1,935; aggregate to Sept. 30, £39,105 increase £967.

Lombardy Road.—Traffic receipts for the month of July, £1,356 increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of October $348,646, increase $42,330; aggregate from January 1, $3,369,489 increase $98,079. Net traffic receipts $187,195, increase $23,104 aggregate from January 1, $1,809,151, increase $169,286.
